	Page
<b>Section 1: Atomic Collision Processes</b>	
DRUKAREV G.F.    Excitation and ionization of atoms by electron and proton impact: approximate expressions and scaling relations for the cross sections.	1
ZAPESOCHNY I.P.    Excitation and ionization by electrons.	26
FEDORENKO N.V.    Electron capture and loss processes for hydrogen atoms, protons and negative ions in atomic and molecular gases: experimental data on cross sections.	54
AFROSIMOV V.V.    The study of elementary processes of exchange at atomic collisions.	75
ILJIN R.N.    The formation and Lorentz ionization of highly excited atoms.	113
BELYAEV V.A.    Experimental possibilities of the merging beam technique to study ion-atom collision processes.	133
GRUJIĆ P.    Threshold laws for electron-atom collisions.	150
CHIBISOV M.I.    Transition sublevels of the fine and hyperfine structure in the slow heavy particle atomic collisions.	175
STAMATOVIĆ A.    On the significance of the energy resolution in the experimental study of the electron-atom and electron-molecule collisions.	181
<b>Section 2: Particle Interaction with Solids</b>	
HAGSTRUM H.D.    Nonradiative processes at solid surfaces.	190
THOMPSON M.W.    Sputtering	211
THOMPSON M.W.    Channeling	223
DAVIES J.A.    Introduction to ion implantation.	237
DAVIES J.A.    The "channeling effect" technique for studying foreign atomic locations within the crystal lattice.	267
