

SYMPORIUM ON TURBULENCE AND NON-LINEAR EFFECTS IN PLASMAS

Culham Laboratory, July 23rd-27th 1973

General Review Lectures

<u>Title</u>	<u>Author</u>	<u>Page No.</u>
Introduction to Non-linear Plasma Physics and Large Amplitude Phenomena	W.E. Drummond D.W. Ross	1
High Reynolds Number Turbulence and Energetic Catastrophies	U. Frisch	43
Coherent Wave-Particle Interactions	W.B. Thompson	51
A Non-linear Theory for the Parametric Instability with comparable Electron and Ion Temperatures	C. Oberman	61
Weak Turbulence Theory (Wave-Particle Effects)	D. Biskamp	93
The Many-Wave Problem	G. Laval	121
Some Problems and Methods in Computational Plasma Physics	M.R. Feix	139
Three Electron Population Models for Current Carrying Plasmas	B. Coppi R. Pozzoli	183
Turbulent Heating of Plasma	S. Hamberger	235
Non-linear Laser-Plasma Interactions	T.P. Hughes	255
Statistical Theory of Strong Turbulence	J.R. Herring	305

Specialized Seminars

Fluctuation Levels connected with Reactive Marginal Instabilities	E. Minardi	351
Closure: Present State of the Art	D.C. Leslie	367
The Auto-Resonant Accelerator	M.L. Sloan W.E. Drummond	379
Collisionless Shock Waves	J.J. Sanderson	393

Non-linear Interactions in Plasma treated by Tsytovich Method	H. Motz	403
Enhanced Electron-Electron Collisions: The Clump Problem	F. Engelmann T. Morrone F. Santini	427
Theoretical Aspects of Turbulent Heating Plasmas	D. Biskamp	433
Secular Perturbation Theory of the Vlasov Equation	W. Horton	453
Strong Turbulence and Two-dimensional Plasmas	S.F. Edwards	473
Fluctuations in Turbulent Plasmas	I. Cook	493
