

CONTENTS

VIBRATIONAL—TRANSLATIONAL ENERGY EXCHANGE IN COLLISIONS OF HOMONUCLEAR DIATOMIC MOLECULES

E. E. Nikitin, A. I. Osipov,
and S. Ya. Umanskii

Introduction	1
1. The Simplest Model for Vibrational Deactivation—the SSH Model	4
2. Interaction Potentials—Models and Quantum Mechanical Calculations	11
3. Refined Dynamic Models for Vibrational Deactivation: The Hierarchy of Approximations	16
4. Specific Vibrational Deactivation Processes: Experiment and Theory	22
5. Conclusion	43
References	44

ELEMENTARY PROCESSES IN NONSYMMETRIC COLLISIONS OF INERT GAS ATOMS

A. Z. Devdariani and A. L. Zagrebin

Introduction	49
1. Excited State Terms of Quasimolecules	50
1.1. The Effective Hamiltonian for the $X(n_0p^5nl) + Y(^1S_0)$ Quasimolecule	50
1.2. Matrix Elements of the Effective Hamiltonian. Semiempirical Method for Analyzing Quasimolecular Terms	53

1.3. Results of Calculations and Experimental Data	61
2. Processes Determined by Elastic Collisions of Atoms	79
2.1. Diffusion of Excited Atoms in Mixtures of Inert Gases	80
2.2. Collisionally Induced Satellites of Forbidden Lines and Radiative Quenching of Metastable States	82
2.3. Collisional Depolarization of Excited Atoms	92
Conclusion	98
References	98

PARAMETERS OF GASEOUS DIMERS

B. M. Smirnov and A. S. Yatsenko

Introduction	103
References	140

CHEMOIONIZATION PROCESSES IN LOW-TEMPERATURE PLASMAS

N. B. Kolokolov and A. A. Kudryavtsev

Introduction	145
1. The Influence of CI Processes on the Electron Energy Distribution Function and Other Characteristics of Electron Gases	149
1.1. CI Processes and the Electron Distribution Function (Local and Nonlocal Regimes)	150
1.2. Electron Diffusion, the Ambipolar Electric Field, and the Wall Potential Jump When CI Processes Are Included	164
1.3. CI Processes and the Electron Temperature	169
2. Effect of CI Processes on the Kinetics of Level Populations, Ionization, and Recombination in Low-Temperature Plasmas	173
2.1. Plasmas with an Ionization Disequilibrium	173
2.2. Plasmas with a Recombination Disequilibrium	179

3. The Role of CI Processes in Engineering Devices and Scientific Apparatus	181
3.1. Gas Lasers	182
3.2. Current-Free Photoplasmas	182
3.3. Cryogenic Plasmas	183
3.4. Gas Breakdown	183
3.5. Determination of the Rates of Elementary Processes from Measurements in Plasmas	184
3.6. Controlling the Parameters of Current-Free Plasmas	185
References	186

PHYSICAL PROPERTIES OF STRONGLY COUPLED PLASMAS

V. S. Vorob'ev and A. A. Likal'ter

Introduction	191
1. Basic Physical Concepts	193
1.1. The Range of Parameters of Nonideal Plasmas	193
1.2. The Correlation Radius	197
1.3. Flow Level	198
1.4. Average Energy of Delocalized Electrons	200
2. Interaction Models	201
2.1. Interaction of an Electron with the Nearest Ion	201
2.2. Cell Model	205
3. Kinetic Characteristics	205
3.1. Three-Body Recombination in Nonideal Plasmas	205
3.2. Limiting Formulas for the Electrical Conductivity	209
4. Metallization of an Atomic Gas	213
4.1. Quasiatomic Gas	213
4.2. Internal Energy Spectrum of a Quasiatom	215
4.3. The Energy of a Quasiatomic Gas	218
4.4. The Plasma Phase Transition	222
4.5. Electronic Properties of Quasiatomic Gases	227
5. Dense Metal Vapor Plasmas	232
5.1. Cluster Ions	232
5.2. Anomalous Electrical Conductivity	235

5.3. Strongly Coupled Cluster Plasmas	238
Conclusion	241
References	242

HETEROGENEOUS REACTIONS IN NONEQUILIBRIUM HALOGEN-CONTAINING PLASMAS

D. I. Slovetskii

Introduction	245
1. Adsorption of Halogens and Halogen-Containing Particles on the Surfaces of Metals and Semiconductors	251
2. Reactions of Halogen Atoms and Molecules with Metal and Silicon Surfaces	258
Interaction of Aluminum with Chlorine and Bromine	272
Interaction of Copper with Chlorine and Bromine	273
Interaction of Platinum with Fluorine Atoms	277
Interaction of Refractory Metals (W, Mo, Ta, Ti) with Atomic and Molecular Fluorine	279
Interaction of Molybdenum with Chlorine	281
Interaction of Indium and Lead with Molecular Chlorine	282
Reactions of Tungsten and Niobium with XeF_2	282
Interaction of Silicon with Atomic and Molecular Fluorine	283
Interaction of Silicon with Xenon Difluoride	285
Interaction of Silicon with Chlorine	286
3. Ion-Bombardment Stimulated Reactions of Halogens with Materials	287
4. The Interaction of Nonequilibrium Halogen-Containing Plasmas with Metals and Silicon	301
5. Polymerization in Nonequilibrium Halogen-Containing Plasmas	308
Conclusion	311
References	312

**THEORY OF THE NONTHERMAL CONTRACTION
OF THE POSITIVE COLUMN
OF GLOW DISCHARGES**

A. V. Eletsii and R. V. Chiflikyan

Introduction	317
1. The Electron Energy Distribution Function in Plasmas with a Moderate Degree of Ionization	319
2. Dependence of the Rate Constants for Stepwise Ionization on the Degree of Ionization of the Plasma	324
3. Rate Constant for Direct Electron-Impact Excitation of Resonance States of Atoms	329
4. Conditions for Nonthermal Contraction of Discharges in Inert Gases	335
5. The Radial Distribution of Charged Particles in a Contracted Discharge	340
Conclusion	346
References	348
