

CONTENTS

Editor's Foreword	vii
Preface	ix
Introduction	1
Chapter I Nonlinear Wave–Wave Interaction	5
I-1 Resonant Interaction Between Three Oscillators	5
I-2 Resonant Interaction Between Plasma Waves	7
I-3 Interaction Between Waves of Finite Amplitude	11
I-4 Many-Wave Interaction in Random Phase Approximation	20
I-5 Plasma Turbulence in Terms of the Kinetic Equation for Waves	24
I-6 Negative Energy Instability	30
I-7 The Adiabatic Approximation (Coupling Between High- Frequency and Low-Frequency Modes)	32
Damping of an ion acoustic wave in a gas of Langmuir plasmons	34
Instability of a plasmon gas	34
References	35
Chapter II Wave–Particle Interaction	37
II-1 Wave–Particle Interaction for a Single Wave	37
II-2 The Many-Waves Case	43
II-3 Quasilinear Theory of the Electromagnetic Modes	54
II-4 Quasilinear Theory of the Post–Rosenbluth Loss–Cone Instability	60
II-5 Nonresonant Wave–Particle Interaction	67
II-6 Quasilinear Theory of Drift Instability	73
Linear theory of drift waves	73
Nonlinear stability of the monochromatic drift wave	77

Quasilinear relaxation of the particle distribution and transport processes	81
References	88
Chapter III Wave-Particle Nonlinear Interaction	89
III-1 Electron Plasma Oscillation Turbulence	89
III-2 Current-Driven Ion Sound Turbulence	94
III-3 Nonlinear Theory of the Drift Instability	103
III-4 Effect of Thermal Fluctuations	111
References	112
Chapter IV Summary	115
IV-1 The General Scheme of Weak Turbulence Theory	115
Index	119
