## PREFACE xv

## Part I / SINGLE-FLUID THEORY, INCLUDING RADIATIVE PROCESSES 1

### 1 / OVERVIEW 3

- The Applicability of a Fluid Approach 3
- Mean Free Path for Neutral Atoms and Molecules 5
- Photon Mean Free Path Versus Particle Mean Free Path 6
- Mean Free Paths for Charged Particles 7
- The Debye Length 8
- The Plasma Parameter 10
- Electron Plasma Frequency and Charge Separation 11
- Electric Currents and Magnetic Fields 12
- Landau Damping 13

### 2 / RELATION OF KINETIC THEORY TO FLUID MECHANICS 14

- Boltzmann's Equation 14
- Collisional Invariants 18
- Moment Equations for Conserved Quantities 20
- Mass Conservation 20
- Momentum Conservation 21
- Energy Conservation 22
- The Need for a Closure Relation 23

### 3 / TRANSPORT COEFFICIENTS FOR DIFFUSIVE EFFECTS 25

- Chapman-Enskog Procedure 25
- Lowest-Order Solution: Euler Equations 26
- Next-Order Approximation: Navier-Stokes Equations 28
- Simple Order-of-Magnitude Estimate 30
- Alternative Derivation via Velocity Correlations 32
- Krook's Equation 33
- General Unimportance of Particle Diffusive Effects 34
- Hierarchy of Time Scales 36

---

4 /	FLUIDS AS CONTINUA	37
	Kinematics of Fluid Motion	37
	Application to Differential Motions in the Galaxy	40
	Linear Momentum of a Fluid Element	41
	Angular Momentum of a Fluid Element	42
	Application to Galaxy Formation	43
	Eulerian versus Lagrangian Description	44
	Mass Conservation	45
	Momentum Conservation	45
	Energy Conservation	46
	Gravitational Stresses	46
	Radiative Force and Work	48
	Symmetry of Stress Tensor	49
	Pressure and Viscous Stress Tensor	50
	Conductive Flux and Heat Equation	51
	Radiative Effects	52
	Optically Thick Conditions	53
	Summary	53
5 /	EQUILIBRIA OF SELF-GRAVITATING SPHERICAL MASSES	54
	Assumption of Spherical Symmetry	54
	Transformation to a Lagrangian Description	55
	Boundary Conditions	57
	The Assumption of Quasihydrostatic Equilibrium	58
	The Mechanical Equilibria of Cold Self-Gravitating Spheres	59
	Mass-Radius Relationship	60
	Giant Planets and Neutron Stars	61
6 /	INVISCID BAROTROPIC FLOW	64
	Kelvin's Circulation Theorem	65
	Application to Incompressible Flows	67
	Laminar and Turbulent Boundary Layers	69
	Bernoulli's Theorem	71
	Crocco's Theorem	72
	A Simple Application of Bernoulli's Theorem	73
	The de Laval Nozzle	74
	The Bondi problem	77
	Parker's Solar-Wind Solution	81
7 /	VISCOUS ACCRETION DISKS	82
	Basic Equations	83
	Need for a Source of Anomalous Viscosity	86
	Steady-State Viscous Accretion and the Boundary Layer	88
	Budget for Energy Release	90
	Spectral Energy Distribution	92

## CONTENTS

---

8 /	FLUID INSTABILITIES	93
	Convective Instability	93
	Rotational Instability	98
	Rayleigh-Taylor and Kelvin-Helmholtz Instabilities	101
	Application to the Radiative Core of the Sun	105
	Thermal Instability	106
	Gravitational Instability	110
9 /	VISCOUS SHEAR FLOWS AND TURBULENCE	113
	Poiseuille Flow	113
	Technique for Stability Analysis	114
	Results	116
	Onset of Turbulence	117
	Role of Eddies in Incompressible Turbulence	119
	Homogeneous Isotropic Turbulence	120
	Inertial Subrange	121
	The Role of Compressibility	122
	Jupiter's Red Spot	123
10 /	MIXING-LENGTH THEORY OF CONVECTION	125
	Convection in Interior Zones	125
	Concept of Mixing Length	126
	Convective Flux	128
	Efficient Convection	129
	Inefficient Convection	131
Part II / WAVES, SHOCKS, AND FRONTS 133		
11 /	SPIRAL DENSITY WAVES: DISPERSION RELATION	135
	Governing Equations	136
	Basic State	137
	Linearized Perturbation Equations	137
	Fourier Decomposition	138
	WKBJ Approximation and Geometric Interpretations	139
	Asymptotic Solution of Poisson's Equation	142
	Asymptotic Theory of Spiral Density Waves	144
	Axisymmetric Stability Criterion	144
	Nonaxisymmetric Waves and Lindblad Resonances	147
	$Q$ Barriers	149
	Lowest-Order Wave Equation	150
12 /	SPIRAL DENSITY WAVES: GROUP PROPAGATION AND AMPLIFICATION	152
	Amplitude Variation	152
	Wave Energy and Angular Momentum	153
	Change in Sign Across Corotation	155

Group Velocity	156
Relationship Between Quantum Mechanics and Classical Mechanics	158
Application to Spiral Density Waves	160
Conservation of Wave Energy and Angular Momentum	160
The WASER Mechanism	161
The SWING Mechanism	164
Summary	165
 13 / METHOD OF CHARACTERISTICS	166
Pressureless Motion of a Fluid in a Gravitational Field	166
Steady, Inviscid, Irrotational Flow of a Barotropic Gas in Two Spatial Dimensions	169
Second-Order PDE for Velocity Potential	170
General Problem in Two Independent Variables	170
Classification of Single PDE of Second Order	171
Examples of Hyperbolic, Parabolic, and Elliptic PDEs of Second Order	172
Boundary Conditions for Well-Posed Problems	173
Difference Between Hyperbolic and Elliptic Cases	176
Relaxation Technique for Solving Elliptic PDEs	177
Explicit and Implicit Techniques for Solving Parabolic PDEs	180
 14 / STEADY SUPERSONIC FLOW	185
Trajectory and Solution Characteristics	185
Distinction Between Subsonic and Supersonic Flow	186
Mach Characteristics	188
Riemann Invariants	190
Solution of Flow Problem by the Method of Characteristics	191
Expansive Flows Around Curved Walls	193
Compressive Flows Into Curved Surfaces	196
Difficulty with Steady Supersonic Turbulence	198
Supersonic Flow Past Objects of Arbitrary Shape	199
 15 / STEEPENING OF ACOUSTIC WAVES INTO SHOCK WAVES	203
Small-Amplitude Acoustic Waves	203
Unsteady Flow of an Isentropic Ideal Gas in One Dimension	205
Propagation and Steepening of a Simple Wave	207
The Structure of Viscous Shocks	209
Rankine-Hugoniot Jump Conditions	214
Artificial Viscosity	216
 16 / OBLIQUE SHOCKS AND OPTICALLY THIN RADIATIVE LAYERS	218
Oblique Shocks	218
Jump Conditions	220
Shock Polar	221

	Radiative Shocks	226
17 /	BLAST WAVES AND SUPERNOVA REMNANTS	230
	Similarity Basis for Blast-Wave Problem	230
	Some Typical Numbers	232
	Taylor-Sedov Solution for Interior of a Blast Wave	235
	Modifications of the Classical Picture	238
18 /	GRAVITATIONAL COLLAPSE AND STAR FORMATION	241
	Maximum Size for a Pre-Main-Sequence Star	241
	Nonhomologous Nature of Gravitational Collapse	244
	Isothermal Equilibria of Self-Gravitating Spheres	246
	Self-Similar Collapse of the Singular Isothermal Sphere	247
	Solution	248
	Physical Interpretation	248
	More Realistic Models	251
19 /	RADIATIVE SHOCKS UNDER OPTICALLY THICK CONDITIONS	252
	Jump Conditions	254
	Radiative Transfer Across the Relaxation Layer	255
	Radiative Precursors	261
	Implications for Protostellar Radius	262
	Stability of Shock Location	262
20 /	IONIZATION FRONTS AND EXPANDING H II REGIONS	264
	Outline of Events	264
	Jump Conditions for Ionization Fronts	267
	Classification of Ionization Fronts	271
	First Expansion Phase and R-type Ionization Fronts	272
	Transition to D-type Ionization Fronts	275
	Second Phase of Expansion of H II Regions	278
	Comparisons with Observations	283
Part III /	MAGNETOHYDRODYNAMICS AND PLASMA PHYSICS	287
21 /	MAGNETOHYDRODYNAMICS	289
	The Four Approximations of Magnetohydrodynamics	290
	The Field Equations of Magnetohydrodynamics	294
	The Influence on the Matter	295
	Field Freezing	297
	Further Analogies with the Vorticity Equation	298
	Summary	299
	Implications for a Nonzero Charge Density	300

22 /	HYDROMAGNETIC EQUATIONS AND HYDROMAGNETIC WAVES	302
	Basic Equations	302
	Linearized Hydromagnetic Disturbances	303
	Alfven Waves	305
	Fast and Slow MHD Waves	307
	Wave-Propagation Diagram	308
	Eigenvectors	309
	Nonlinear Alfven Waves and Their Torsional Counterparts	310
	Application to Accretion Disks	313
23 /	MAGNETOSTATICS AND THE PARKER INSTABILITY	317
	Basic Equations	317
	Introduction of Vector Potential	318
	Dungey's Formulation for Magnetostatics	319
	The Mass-to-Flux Distribution	320
	The Vertical Confinement of the Galactic Magnetic Field	322
	The Parker Instability	324
	Final States for Parker's Instability	325
	An Interesting Sidelight	326
24 /	THE MAGNETIC VIRIAL THEOREM	328
	Scalar Virial Theorem for Self-Gravitating Magnetized Clouds	328
	Application to an Isothermal Gas Cloud	332
	Special Cases and Physical Interpretation	333
	Alternative Interpretation	336
25 /	HYDROMAGNETIC SHOCK WAVES	338
	Basic Equations in Conservation Form	338
	Jump Conditions	339
	Rotational Discontinuities	344
26 /	MAGNETIC RECONNECTION AND DYNAMOS	346
	Cowling's Theorem	347
	Elements Needed for a Dynamo	351
	The Observed Solar Cycle	352
	Solar Flares	353
	Magnetic Reconnection	355
	Bohm Diffusion and Petschek's Mechanism	358
27 /	AMBIPOLAR DIFFUSION	360
	Drag Force Between Neutrals and Ions	360
	Frictional Drag Coefficient	361
	Fractional Ionization	362
	Typical Drift Speeds	363
	Ambipolar Diffusion	364

	Dynamical Equations for Neutrals	364
	A Simple Example	366
	Lagrangian Description	367
	Quasistatic Approximation	368
	Asymptotic Solution	369
28 /	PLASMA PHYSICS	372
	A Generic Astrophysical Problem	372
	The Basic Kinetic Equation of Collisionless Plasma Physics	376
	Self-Consistent Fields	377
	Relationship to Particle Orbits	378
	Phase Mixing and Isolating Integrals	380
	Adiabatic Invariants	383
	Transverse Adiabatic Invariant	385
	Longitudinal Adiabatic Invariant	388
29 /	LONGITUDINAL PLASMA OSCILLATIONS AND LANDAU DAMPING	390
	Perturbational Vlasov Treatment	390
	Landau's Analysis	392
	Absence of Growing Disturbances for Monotonically Decreasing Distribution Functions	396
	Landau Damping in the Long-Wavelength Limit	398
	Physical Interpretation for Landau Damping	401
30 /	ORBIT THEORY AND DRIFT CURRENTS	403
	Some Basic Considerations	403
	Orbits of Charged Particles in Crossed Electromagnetic and Gravitational Fields	405
	Polarization, Electric, and Gravity Drifts	406
	Drift Currents in the Low-Frequency Plasma Approximation	409
	A Plasma as a Diamagnetic and Dielectric Material	412
	Magnetized Plasma Blob Falling Under Gravity	414
	Curvature and Gradient Drifts	416
	Force Associated with Gradient Drift	419
	A Simple Fusion Application	421
A /	USEFUL FORMULAE IN CURVILINEAR COORDINATES	423
	Vector Invariant Forms	423
	Coordinates $(q_1, q_2, q_3)$ and Metric Coefficients $(h_1, h_2, h_3)$	423
	Cylindrical Coordinates $(\varpi, \varphi, z)$ : $h_\varpi = 1$ , $h_\varphi = \varpi$ , $h_z = 1$ .	424
	Spherical Coordinates $(r, \theta, \varphi)$ : $h_r = 1$ , $h_\theta = r$ , $h_\varphi = r \sin \theta$ .	425

## PROBLEM SETS

Problem Set 1 429

Problem Set 2 433

Problem Set 3 439

Problem Set 4 452

BIBLIOGRAPHY 459
