Contents

LIST OF NOTATIONS xv

1. Statistical Description of a Plasma **1**

1.1. Microscopic equations 1
The microscopic density 1
The equation of continuity and Maxwell's equations 2
1.2. The Liouville distribution 4
The Liouville equation 4
Statistical averaging 5
1.3. The one-particle distribution function and correlation functions 6
Sequence of distribution functions 6
Connection between one-particle and many-particle distribution functions 7
1.4. The Bogoliubov–Born–Green–Kirkwood–Yvon hierarchy 9
1.5. Self-consistent field approximation 11
The Vlasov kinetic equation 11
Effects of electromagnetic interactions between particles 12
1.6. Influence of binary correlations and the collision term 13
The kinetic equation with collisions 13
Coulomb collisions 16
Correlation weakening principle and irreversibility 17

2. Non-linear Electrodynamic Equations **19**

2.1. The non-linear equation for the potential field in a plasma 19
Solution of the kinetic equation 19
Relation between the polarization and the electric field strength 21
2.2. Longitudinal dielectric permittivity and non-linear electric susceptibilities of a plasma ... 22
General relations 22
Symmetry properties 23
The long-wave limiting case 23
Non-linear susceptibilities of a cold plasma 25
2.3. Multiple-time-scale perturbation analysis of the non-linear equation for the longitudinal field 28
Hierarchy of times and expansion in the non-linearity parameter series 28
Linear approximation 29
Quadratic interaction and three-wave resonances 30
Cubic interaction and four-wave resonances 31
2.4. The general non-linear equation for the field in a plasma 32
Maxwell's equations and the non-linear material relation 32
The non-linear equation for the electric field in a plasma 33
2.5. The dielectric permittivity tensor and non-linear tensor susceptibilities of a plasma 34
General formulas 34
Symmetries of the dielectric permittivity tensor 35
Symmetries of the non-linear susceptibilities 36
Non-linear tensor susceptibilities of a cold plasma 36

2.6. *Hierarchy of multiple-time-scale approximate equations for the electromagnetic field in a plasma* 38
Basic set of equations 38
Linear approximation 39
Three-wave resonances 39
Four-wave resonances 40

3. Electrodynamic Properties of a Magneto-active Plasma **42**

3.1. *Longitudinal dielectric permittivity and non-linear susceptibilities of a plasma in the presence of a magnetic field* 42
Solution of the kinetic equation 42
The dielectric permittivity of an equilibrium plasma 45
The dielectric permittivity of a plasma with an anisotropic velocity distribution 45
Non-linear susceptibilities of a cold plasma 46
3.2. *The dielectric permittivity tensor of a magneto-active plasma* 48
Solution of the linearized general kinetic equation 48
The general form of the dielectric permittivity tensor 50
An equilibrium plasma 51
A plasma with an anisotropic velocity distribution 51
A cold magneto-active plasma 52
3.3. *Non-linear tensor susceptibilities of a magneto-active plasma* 52
The general case 52
A cold plasma 53

4. Waves in Plasmas **55**

4.1. *Eigenoscillations and eigenwaves in space–time dispersive media (linear approximation)* 55
The dispersion equation 55
Wave polarization 56
Density and flux of energy 58
Fluctuations and averaging over initial phases 59
4.2. *Waves in an isotropic plasma* 60
Dispersion relations for longitudinal and transverse waves 60
Longitudinal Langmuir and ion-sound waves 60
Transverse electromagnetic waves 61
4.3. *Waves in a magneto-active plasma* 62
The dispersion equation for waves in a magneto-plasma 62
Plasma resonances 63
Refractive indexes and eigenwave frequencies in a cold magneto-plasma 65
Thermal waves in a magneto-plasma 67

5. Non-linear Wave Interactions **70**

5.1. *Non-resonant wave interaction and plasma echoes* 70
Resonant and non-resonant wave interactions 70
Plasma echoes 71
Longitudinal echo oscillations 71
Echo oscillations in the case of anti-parallel wave vectors of the perturbations 73
Three-pulse echo oscillations 75
5.2. *Three-wave resonant coupling* 80
Dynamic equations for interacting waves 80
Conservation of energy and momentum of interacting waves 82
Resonant three-wave coupling 83
Decay instability 84
Explosive instability 85

5.3. *Four-wave resonant coupling* ... 87
The resonance condition and dynamic wave equations ... 87
Resonant coupling of four waves with fixed phases ... 89
Non-linear frequency shift of eigenmodes in a cold plasma ... 90
Effect of electron thermal motion on non-linear frequency shifts ... 91
Influence of the ion motion ... 94
Non-linear eigenfrequency shifts of Langmuir waves ... 95
5.4. *Parametric resonance in a plasma* ... 97
Dispersion equation for waves in a pump wave field ... 97
Induced scattering ... 100
Parametric instability ... 102

6. Fluctuations in Plasmas ... **104**

6.1. *Fluctuations in spatially homogeneous stationary systems* ... 104
Space-time correlation functions ... 104
Correlators for the distribution function fluctuations ... 106
6.2. *Fluctuations in a system of non-interacting charged particles* ... 108
Spectral correlators for the fluctuations of the distribution function ... 108
Spectral distributions for the fluctuations of particle, charge and current densities ... 109
Higher-order correlation functions ... 111
Spectral distributions of fluctuations in the presence of an external magnetic field ... 112
6.3. *Fluctuations in an ensemble of charged particles taking into account electromagnetic interaction between particles (linear approximation)* ... 113
Effect of Coulomb interactions between particles on the fluctuations of the distribution function ... 113
Averaging procedure and the correlator for the fluctuations of the distribution function ... 116
Spectral distributions of particle, charge and current density fluctuations in a plasma ... 118
Effect of electromagnetic interactions between particles on plasma fluctuations ... 121
Electromagnetic fluctuations in an isotropic plasma ... 123
6.4. *Collective fluctuations and the effective temperature (potential field)* ... 124
Incoherent and coherent (collective) fluctuations ... 124
Collective fluctuations in a non-equilibrium plasma and the effective temperature ... 126
Critical fluctuations near the instability threshold ... 127
Critical fluctuations in a plasma with a directed particle motion ... 128
Critical fluctuations in a plasma with an anisotropic velocity distribution ... 130
6.5. *Collective electromagnetic fluctuations* ... 131
The spectral distribution of fluctuations and the effective temperature ... 131
High-frequency fluctuations in a magneto-active plasma ... 133
Low-frequency fluctuations in a magneto-active plasma ... 133

7. Effect of Non-linear Wave Interactions on Fluctuations in a Plasma ... **135**

7.1. *Equations for the spectral correlation functions (potential field)* ... 135
The non-linear equation for the fluctuation field ... 135
Correlation functions ... 136
The equation for the quadratic correlation function ... 137
Equations for ternary and quaternary correlation functions ... 140
7.2. *The stationary fluctuation spectrum taking into account non-linear corrections* ... 141
Iteration process ... 141
Induced enhancement of fluctuations ... 142
7.3. *Non-linear frequency shifts and saturation of fluctuations in a non-equilibrium plasma* ... 143
Non-linear eigenfrequency shift ... 143
Saturation of the non-equilibrium fluctuation level ... 145
Turbulent fluctuations in a beam–plasma system ... 146
Non-linear stabilization of the hydrodynamic beam–plasma instability ... 148
Turbulent fluctuations in a plasma with an anisotropic velocity distribution ... 149

7.4. *Spectral correlation functions for electromagnetic fluctuations* ... 150
The non-linear equation for the fluctuations of the electromagnetic field ... 150
Set of equations for the sequence of correlation functions ... 152
The stationary spectrum of electromagnetic fluctuations ... 155
Non-linear frequency shifts of electromagnetic eigenoscillations ... 158
Saturation of the level of non-equilibrium electromagnetic fluctuations ... 159

8. Fluctuation-Dissipation Theorem ... **161**

8.1. *Inversion of the fluctuation–dissipation theorem* ... 161
Relation between the dielectric permittivity of an equilibrium plasma and the correlation function for fluctuations in a system of non-interacting particles ... 161
Fluctuation–dissipation theorem for a non-equilibrium plasma ... 163
8.2. *Non-linear fluctuation–dissipation relations* ... 165
Relation between non-linear susceptibilities and higher order correlation functions for plasma fluctuations (potential case) ... 165
Spectral correlation functions ... 168
Sum rules ... 169
The non-linear fluctuation–dissipation theorem for electromagnetic fluctuations ... 172

9. Kinetic Equations ... **175**

9.1. *The kinetic equation for particles* ... 175
Spectral distribution of field fluctuations and the equation for the one-particle function 175
The Balescu–Lénard collision term ... 177
Dynamic friction and diffusion coefficients ... 178
Quasi-linear approximation ... 181
9.2. *The kinetic equation for waves (potential field)* ... 185
Time evolution of the spectral distribution of the fluctuation field ... 185
Linear approximation ... 188
The kinetic equation for longitudinal plasma waves ... 190
Non-linear Landau damping ... 194
9.3. *The kinetic equation for waves (general case)* ... 196
Time evolution of the spectral correlation function for the electromagnetic field ... 196
The kinetic equation for electromagnetic waves in a plasma ... 197
Parametric instability and turbulence ... 199

10. Scattering and Radiation of Waves ... **204**

10.1. *Scattering and transformation of waves in a plasma* ... 204
Derivation of scattering and transformation cross-sections from the kinetic equation for waves ... 204
Scattering and transformation cross-sections in an isotropic plasma ... 206
10.2. *Scattering and transformation of transverse waves* ... 208
Scattering of transverse electromagnetic waves in a plasma ... 208
Spectral distribution of scattered radiation ... 213
Transformation of transverse electromagnetic waves into longitudinal Langmuir and ion-sound waves ... 216
10.3. *Scattering and transformation of longitudinal waves* ... 218
Scattering of longitudinal Langmuir waves ... 218
Transformation of longitudinal Langmuir waves into longitudinal ion-sound ... 219
Transformation of longitudinal Langmuir waves into transverse electromagnetic waves .. 220
10.4. *Radiation from a plasma* ... 221
Plasma bremsstrahlung ... 221
Spontaneous emission by a non-equilibrium plasma ... 224

11. Wave Interaction in a Semi-bounded Plasma 226

11.1. Waves in a semi-bounded plasma 226
The non-linear equation for the potential field in a semi-bounded plasma 226
Dispersion equations for bulk and surface waves (linear approximation) 229
Surface waves 231
The non-linear equation for the field (general case) 232
11.2. Non-linear interaction of surface waves 234
Resonant wave interaction 234
Three-wave surface wave decays 237
Non-linear interactions of bulk and surface waves 240
11.3. Fluctuations and kinetic equations for surface waves 243
Fluctuations 243
Kinetic equation for surface waves 247
