

# CONTENTS

	Preface	v
	Introduction	1
<b>1</b>	<b>Topology of Wave-normal Surfaces</b>	
	1-1 Introduction	5
	1-2 The Dielectric Tensor	9
	1-3 The Dispersion Relation	11
	1-4 Polarization and Phase Relations	12
	1-5 Cutoff and Resonance	13
	1-6 The Clemmow-Mullaly-Allis Diagram	14
	1-7 Topological Genera of Wave-normal Surfaces	16
	1-8 Labeling of Wave-normal Surfaces	17
	1-9 Transitions of Topological Genera	19
	1-10 Transitions of Wave-normal-surface Labels	20
	1-11 Wave-normal Surfaces for a Plasma with Finite Temperature	22
	Problems	25
<b>2</b>	<b>Waves in a Cold Uniform Plasma</b>	
	2-1 Introduction	27
	2-2 Definitions and Simple Relations	28
	2-3 Clemmow-Mullaly-Allis Diagram for a Two-com- ponent Plasma	29
	2-4 Propagation Parallel and Perpendicular to $\mathbf{B}_0$	30
		vii

2-5	Hydromagnetic Waves of Alfven and Astrom	32
2-6	Ion Cyclotron Waves	34
2-7	The Hybrid Resonances	37
2-8	The Appleton-Hartree Dispersion Relation	38
2-9	Ion Acoustic and Electrostatic Ion Cyclotron Waves	41
	Problems	43
<b>3</b>	<b>Energy Flow and Accessibility</b>	
3-1	Introduction	45
3-2	Energy Transfer	46
3-3	Group Velocity	49
3-4	Some Geometrical Relations	52
3-5	Ray Tracing in Inhomogeneous Media	55
3-6	Transport of Amplitudes	59
3-7	Accessibility	60
3-8	Calculations of Accessibility	62
	Problems	65
<b>4</b>	<b>Kruskal-Schwarzschild Solutions for a Bounded Plasma</b>	
4-1	Introduction	67
4-2	The Boundary Equations	70
4-3	An Equilibrium Solution	73
4-4	Linearization of the Equations	74
4-5	Solution of the First-order Boundary Equations	76
4-6	Solution of the First-order Plasma Equations	78
4-7	The Rayleigh-Taylor Instability	79
	Problems	80
<b>5</b>	<b>Free and Forced Oscillations of a Cold Cylindrical Plasma</b>	
5-1	Introduction	82
5-2	Alfven and Ion Cyclotron Waves in a Cylindrical Plasma	83
5-3	The Vacuum and Boundary Equations	85
5-4	Solution of the Steady-state Problem	87
5-5	Forced Oscillations	89
5-6	Wave Generation by an Induction Coil of Finite Length	91
5-7	Evaluation of the Contour Integral	93
5-8	Intepretation of Results	96
5-9	Coil Impedance and Plasma Loading	99
5-10	Plasma Loading for Alfven and Ion Cyclotron Waves	101

5-11	An Incomplete Bibliography of Related Work	102
	Problems	104

## 6 Plasma Models with Discrete Structure

6-1	Introduction	107
6-2	The Two-stream Instability	109
6-3	The Beam Equations	110
6-4	Solution for Two Beams	112
6-5	The Dawson Modes for a Plasma of Many Beams	114
6-6	The Trapping of Charged Particles	118
6-7	A Nonlinear Plasma Wave	119
6-8	Beam-excited Plasma Oscillations	121
6-9	Nonlinear Oscillations of Many Charge Sheets	124
	Problems	128

## 7 Longitudinal Oscillations in a Plasma of Continuous Structure

7-1	Introduction	131
7-2	A Physical Picture of Landau Damping	132
7-3	Environments for Valid Landau Damping	136
7-4	The Collisionless Boltzmann Equation	140
7-5	Analytic Continuation of the Integrals	143
7-6	The Dispersion Relation	146
7-7	The Van Kampen Modes	147
7-8	The Nyquist Criterion for Instability	148
7-9	The Two-stream Instability in a Hot Plasma	153
	Problems	155

## 8 Derivation of the Theory for a Hot Plasma in a Magnetic Field

8-1	Introduction	158
8-2	A Physical Picture of Cyclotron Damping	159
8-3	Magnetic Trapped-particle Modes	162
8-4	Solution of the Boltzmann Equation	167
8-5	Transformation from Lagrangian to Eulerian Coordinates	170
8-6	The Average over Perpendicular Velocities	172
8-7	Transformation to Rotating Coordinates	174
8-8	Exact Moments for a Maxwellian Distribution Shifted in $v_z$	176
8-9	Approximate Moments for a Maxwellian Plasma	182
	Problems	183

<b>9</b>	<b>Some Applications of the Equivalent Dielectric Tensor</b>	
9-1	Introduction	185
9-2	The Mobility Tensor	186
9-3	The Equivalent Dielectric Tensor	189
9-4	Dispersion Relations for Parallel Propagation	193
9-5	Transit-time Damping in the Magnetosonic Wave	196
9-6	Magnetosonic Instability due to Anisotropic Electron Pressure	199
9-7	Magnetosonic Overstability due to Current Flow	200
9-8	The Marginal State for the Magnetosonic Wave	203
9-9	Power Absorption by Collisionless Processes	204
9-10	Transit-time Magnetic Pumping	206
9-11	Cyclotron Overstability and Damping	207
9-12	Ion Cyclotron Overstability Due to Runaway Electrons	208
9-13	Cyclotron Overstability Due to Pressure Anisotropy	211
9-14	Electron and Ion Acoustic Waves	213
9-15	Enhanced Diffusion from Ion Wave Instabilities	219
9-16	Electrostatic Waves in a Magnetic Field	223
	Problems	233
<b>10</b>	<b>Reflection and Absorption of Waves in a Hot Inhomogeneous Plasma</b>	
10-1	Introduction	235
10-2	Zeros and Infinities in the Refractive Index	237
10-3	Solutions to the Wave Equation near a Turning Point	240
10-4	Asymptotic Solutions	243
10-5	The Budden Tunneling Factors	244
10-6	The Absorption Layer	246
10-7	Evanescence and Absorption	249
10-8	Resistivity and Collision Corrections to the Dielectric Tensor	250
10-9	Examples of Evanescence and Absorption	253
	Problems	258
	Bibliography	261
	Index	269
	List of Symbols	277
