DISTRIBUTIONS OF ELECTRON-EXCITED MOLECULES OVER VIBRATIONAL-ROTATIONAL LEVELS IN GAS DISCHARGE: FORMATION MECHANISMS

V.N. Ochkin, S.Yu. Savinov, N.N. Sobolev

Intro	luction		7
Chapter 1:	Measur	ement Methods, Experimental	
-	Techni	que	12
1.1.	Line Absorption Method, Emission Reabsorption		12
	1.1.1.	Line absorption at the singlet lines	13
	1.1.2.	Line absorption at the unresolved multiplet	
		lines	14
	1.1.3.	Determination of level populations and	
		rotational temperature	16
	1.1.4.	Incorporating emission reabsorption for	
		multiplet spectral lines	17
	1.1.5.	Application of line absorption method and	
		incorporation of emission reabsorption for	
		CN, OH, and N, molecules'	19
1.2.	Experimental technique		23
	1.2.1.	D.c. discharge	23
	1.2.2.	Pulsed discharge	25
1.3.	Measur	rement error	25
	1.3.1.	Random error	25
	1.3.2.	Systematic error	27
	1.3.3.	Influence of radial inhomogeneity on tempera-	
		ture measurement by relative emission	
		intensities [35]	30
Sumn	nary		33

Chapter 2:	Distribution of Hydroxyl Radicals of Rotational		
	Levels in Glow Discharge		
2.1.	Character of the Distributions, Experimental Results	35	
	2.1.1. Electron ground state of OH $(X^2\Pi)$	35	
	2.1.2. Excited state of OH $(A^2\Sigma)$	36	
2.2.	Formation of the $OH^{hot}(A^2\Sigma)$ Hot Group	37	
2.3.	Possibility of Gas Temperature Measurement Based on		
	Hydroxyl Emission Spectrum (the $A^2\Sigma - X^2\Pi$ Transition)	40	
2.4.	Difference Between the Formation Mechanisms of the		
	$OH(A^2\Sigma)$ Cold and Hot Groups	44	
	2.4.1. Formation of the cold $OH(A^2\Sigma)$ group	44	
	2.4.2. Density ratio of the hot and cold OH groups	45	
Sumr	nary	48	
Chapter 3:	Intensities in the Rotational Structure of the		
	Vibronic Bands of the 2 ⁺ -System of N ₂ in Glow		
	Discharge		
3.1.	Comparison of the Rotational Distributions of $N_2(C^3\Pi)$		
	and CO $(B^{1}\Sigma)$ to the Rotational Distribution of $\tilde{C}N$		
	and OH Radicals in Glow Discharge Plasma	49	
	3.1.1. Discharge in N ₂ -CO-He mixture	49	
	3.1.2. Discharge in N_2^2 -CO ₂ -He mixture	51	
3.2.	Formation of the Hot and Cold $N_2(C^3\Pi)$ Molecules	52	
	3.2.1. Discharge in N_2 -Ar mixture	54	
	3.2.2. The role of metastable states of $N_2(A^2\Sigma)$		
	in the population of $N_2(C^3\Pi)$	54	
	3.2.3. Experiments with pulsed high-current discharge	59	
3.3.	Intensity Alternation in the Spectrum of the		
	2^+ -system of N ₂	64	
	3.3.1. Nature of the phenomenon, preliminary		
	investigations	64	
	3.3.2. Symmetry properties of the electron wave		
	functions of the N_2-N_2 pair	66	
	3.3.3. Anomalous intensity distribution in the fixed		
	structure of the 2^+ -system of N ₂ excited by		
	N ₂ collisions with $Ar(3p^54s)$ atoms	68	
3.4.	Rotational Distribution of Hot Nitrogen and Hydroxyl		
	Molecules, Statistical Model Approximation	80	

3.5.	Intensity	Distribution in the Vibrational Structure	
	of the E	lectronic Systems of Diatomic Molecules	83
	3.5.1.	Interrelationship of the vibrational	
		distributions in the ground and electron-	
		excited states of diatomic molecules	83
	3.5.2.	Sample vibrational temperature measurements:	
		comparison to results obtained by other methods	86
Sum	mary		90
Con	clusion		91
Appendix S	Summary D	Data on Test Molecules	
I.	Energy l	Level Scheme and Spectrum of the OH Molecule	
	1. The A	$^{2}\Sigma$ -state	92
	2. The X	$\sqrt{2}\Pi$ -state (electron ground state)	93
	3. The A	$^{2}\Sigma - X^{2}\Pi$ -transition	94
II.	Energy l	Level Scheme and Spectrum of the CN Molecule	
	1. $X^2\Sigma$ -	and $B^2\Sigma$ -state	99
	2. $B^2\Sigma - \lambda$	$K^2\Sigma$ transition (violet system of CN)	99
III.	Energy 1	Level Scheme and Spectrum of the CO Molecule	
	$(B^1\Sigma - A^1)$	Π transition)	
	$1. B^1 \Sigma$ -	and $A^{1}\Pi$ states	100
	$2. B^1 \Sigma - A$	$4^{1}\Pi$ transition	102
IV.	Energy 1	Level Scheme and Spectrum of the N ₂	102
	Molecule	$e(2^+-and 1^+-Band Systems)$	
	$1.2^{+}-sv$	stem of N _o ($C^{3}\Pi_{u}$ - $B^{3}\Pi_{a}$ transition)	103
	$2.1^{+}-sys$	stem of N ₂ ($B^3\Pi_{a-}A^3\Sigma^{+}$, transition)	105

ELECTRON-IMPACT EXCITATION LEVELS OF MOLECULAR ELECTRON STATES IN GAS DISCHARGE

D.K. Otorbaev, V.N. Ochkin, P.L. Rubin, S.Yu. Savinov, N.N. Sobolev, S.N. Tskhai

1.	Introduction	121
2.	Adiabatic Approximation in Electron-Molecule	
	Collision Theory	127
3.	Experiment, Methodology, Measurement Conditions	133
4.	Excitation of the $d^3\Pi$ State of Hydrogen and	
	Deuterium	135
	4.1. Rotational Level Populations of H ₂ $(d^{3}\Pi)$	
	in Liquid-Nitrogen-Cooled Discharge	135
	4.2. Excitation Rates of the Rotational	

	Levels of H ₂	136
4.3.	Rotational Level Populations of $H_2(d^3\Pi)$	
	at Different Gas Temperatures	142
4.4.	Deuterium Experiments	143
4.5.	Analysis of Initial Prerequisites	144
Excitat	tion of the Singlet States of Hydrogen	148
5.1.	Radiative Lifetimes	149
5.2.	Relative Radiative Transition Probabilities	151
5.3.	Relative Probabilities of $X^{1}\Sigma$, $K^{0} = 1 \rightarrow$	
	$I^{1}\Pi, K'$ Transitions for Electron-Impact-	
	Excited Ortho Nitrogen	153
5.4.	Relative Intensities in the Rotational	
	Structure of the $G^{1}\Sigma - B^{1}\Sigma$ Transition of H ₂	154
Curren	it State of Research, Comparison of Results	156
lusion		161
endix:	Review of Test States and the Structure of	
	Hydrogen and Deuterium Molecular Transitions	162
rences	-	168
	4.3. 4.4. 4.5. Excitat 5.1. 5.2. 5.3. 5.4. Curren lusion endix: rences	Levels of H ₂ 4.3. Rotational Level Populations of H ₂ ($d^3\Pi$) at Different Gas Temperatures 4.4. Deuterium Experiments 4.5. Analysis of Initial Prerequisites Excitation of the Singlet States of Hydrogen 5.1. Radiative Lifetimes 5.2. Relative Radiative Transition Probabilities 5.3. Relative Probabilities of $X^1\Sigma$, $K^0 = 1 \rightarrow I^1\Pi$, K' Transitions for Electron-Impact- Excited Ortho Nitrogen 5.4. Relative Intensities in the Rotational Structure of the $G^1\Sigma - B^1\Sigma$ Transition of H ₂ Current State of Research, Comparison of Results lusion endix: Review of Test States and the Structure of Hydrogen and Deuterium Molecular Transitions

DOPPLER SPECTRAL LINE BROADENING AND THE VELOCITY DISTRIBUTIONS OF EXCITED ATOMS AND MOLECULES IN NONEQUILIBRIUM PLASMA

T.T. Karasheva, D.K. Otorbaev, V.N. Ochkin, V.A. Rykov, S.Yu. Savinov, N.N. Sobolev, S.N. Tskhay

Intro	duction		175
Chapter 1:	Experin Distribu	nental Methods of Investigating the Velocity Ition Functions of Atoms and Molecules	
1.1.	The Time-of-Flight Velocity Measurement Technique		
			175
	1.1.1.	Time-of-flight experiments: Measurement	
		and processing techniques	178
	1.1.2.	Particle velocity distribution functions	
		determined in time-of-flight experiments	179
1.2.	Velocity	y Measurements of Atoms and Molecules by	
	Doppler	Spectral Line Broadening	181
	1.2.1.	Line shapes and velocity distributions of	
		the radiators	181
	1.2.2.	The influence of collisions on the non- equilibrium particle distributions over	
		the translational degrees of freedom	185

	1.2.3.	Experimental investigations of anomalous Doppler spectral line broadening	189
Chapter 2:	Experim	nental Technique for Velocity Measurements	
2.1	Based of	n Doppier Spectral Line Broadening	202
2.1.		Description of experimental set up	202
	2.1.1.	Application of Eabry Parat interface	202
	2.1.2.	motor to molecular spectral analysis	204
	213	Fourisment function of the Fabry-Perot	204
	<i>4.</i> 1. <i>J</i> .	interferometer	205
2.2.	Softwar	e	206
	2.2.1.	Regularization routines	206
	2.2.2.	Model problems	208
2.3.	Determi	ination of the Velocity Distribution	
	Functions of Excited Particles from		
	Experin	nental Data	211
	2.3.1.	Equipment function of instrumentation	211
	2.3.2.	Possible additional causes of	
		broadening and actual velocity	
		distribution errors	213
Chapter 2:	Velocity	y Distribution Functions of Electron-	
Chapter 2:	Velocity Excited	y Distribution Functions of Electron- Atoms and Molecules in Nonequilibrium	
Chapter 2:	Velocity Excited Gas Dis	y Distribution Functions of Electron- Atoms and Molecules in Nonequilibrium charge Plasma: Formation Mechanisms	
Chapter 2: 3.1.	Velocity Excited Gas Dis Particle	y Distribution Functions of Electron- Atoms and Molecules in Nonequilibrium charge Plasma: Formation Mechanisms Velocity Distributions, Experimental
