Contents

Chapter I
Nonlinear Effects and Plasma Physics
1. Role of Nonlinear Effects in Plasma Physics 1
2. Classification of the Nonlinearities of a Plasma . . . 16
Literature Cited 18

Chapter II
Weak Nonlinearities in Cold Plasma
1. Nonlinear Equation for the Field in a Plasma. 21
2. The Linear Approximation 23
3. Nonlinear Oscillations of Cold Plasma Charges . . . 24
4. Nonlinear Oscillations of Plasma Density 27
5. Nonlinear Plasma Current 28
6. Nonlinear Equations for Transverse and Longitudinal Electromagnetic Fields 29
7. Equations for the Wave Amplitudes 31
8. Nonlinear Interaction of Weakly Damped and Weakly Growing Waves 33
9. Some Consequences of the Derived Equations 36
Literature Cited 38

Chapter III
Nonlinear Interaction of Three Wave Packets
1. Wave Packets 39
2. Phase Relations for Wave Packets 41
3. Interaction of Fixed-Phase Wave Packets 45
4. Interaction of Undamped Wave Packets in an Unstable Plasma 46

5. Instability of Intense Waves in a Plasma 49
6. Random-Phase Wave Packets 51
7. Quasistationary Equilibrium States and Stability of Random-Phase Waves 55
8. Excitation of Longitudinal Waves by Strong Random Transverse Waves 64
9. Some Qualitative Implications 68
Literature Cited 71

Chapter IV
Induced Processes in Plasma
1. Spontaneous and Induced Emission Processes in a Two-Level System 73
2. Interaction of Electromagnetic Waves With a Two-Level System. 76
3. Packets of Interacting Waves as Negative-Temperature Systems 79
4. Density of Quanta in a Plasma 80
5. Nonlinear Wave Interaction Resulting from the Balance of Induced Emission and Absorption . 82
6. Spontaneous Emission of Waves by Waves 86
7. Analogy with the Vavilov-Cerenkov Effect 87
8. The Kinetic Equation for Plasmons 88
9. Induced Combination Scattering 91
Literature Cited 92

Chapter V
General Characteristics and Applications of Decay Processes in Plasma
1. Decay Processes 93
2. The Diffusion Approximation 96
3. Conservation Laws for Decay Processes 100
4. Probabilities of Decay Processes 101
5. Decay Processes in Isotropic Plasma 103
6. Three-Plasmon Decay Processes and Nonlinear Wave Absorption 106
7. Decay Interactions of Langmuir and Ion-Acoustic Waves 107
8. Four-Plasmon Decay Processes and Nonlinear Wave Absorption 114

9. Decay Interactions and Nonlinear Stabilization of a Plasma Instability 115
10 Propagation of a Strong Electromagnetic Wave in a Plasma 119
11. Stabilization of Longitudinal Waves Generated by a Beam of Transverse Waves 120
12. Decay Processes and Plasma Diagnostics 124
13. Decay Processes and Nonthermal Plasma Radiation 126
14. Decay Processes for Negative-Energy Waves: Mechanism of Nonlinear Wave Generation . . . 128
15. Nonlinear Decay Instabilities of Transverse and Longitudinal Waves in Partially Ionized Plasma 132
16. Astrophysical Applications of Decay Interactions 137
Literature Cited 138

Chapter VI
Induced Emission of Waves by Plasma Particles
1. Resonant Particles 141
2. The Quasilinear Approximation 145
3. Conservation Laws 148
4. Probabilities for the Emission of Waves by Plasma Particles 150
5. Landau Wave Damping 152
6. The One-Dimensional Quasilinear Equations . . . 154
7. One-Dimensional Theory of Saturation Effects for Landau Wave Absorption 156
8. Stability of an Isotropic Particle Distribution . . . 159
9. Acceleration of Particles Interacting with Plasma Waves 161
10. Isotropization of Plasma Particles 167
11. Astrophysical Applications of Acceleration and Isotropization of Particles by Plasma Waves . 168
12. On the Acceleration of Electrons and Ions under Laboratory Conditions 169
13. Effective Collision Frequency of Particles and Waves 170
14. Quasilinear Theory of Beam Instability in a Plasma 172

15. Effects of Oscillation Pileup in the Development of Beam Instability 177
16. Limits of Applicability of the Quasilinear Approximation: Hydrodynamic Beam Instabilities of Longitudinal Waves 183
17. Hydrodynamic Instabilities of Beams Caused by Anisotropy of the Distribution Function 193
Literature Cited 198

Chapter VII
Induced Scattering of Waves by Plasma Particles
1. Resonances of Plasma Particles with Several Waves 201
2. The Wave Kinetic Equation 204
3. The Conservation Laws 205
4. Some General Consequences of the Kinetic Equations for Induced Scattering 207
5. Induced Scattering of Waves with Beams of Particles Present in the Plasma 209
6. Scattering Mechanisms 211
7. Compton Scattering of Longitudinal Waves 215
8. Nonlinear Scattering of Longitudinal Waves 222
9. Nonlinear Interaction of Langmuir Waves in Scattering by Plasma Electrons 228
10. Scattering Probabilities 234
Literature Cited 235

Chapter VIII
Induced Scattering of Electromagnetic Waves in an Isotropic Plasma
1. Nonlinear Interactions of Langmuir Waves in Scattering by Electrons 237
2. Nonlinear Scattering by Electrons Through Virtual Transverse Waves 240
3. Induced Scattering of Langmuir Waves by Ions . . 244
4. Comparison of the Energy Transfer by Induced Scattering and by Decay of Langmuir Waves into Ion-Acoustic Waves 246
5. Induced Scattering of Ion-Acoustic Waves 248
6. Induced Scattering of Langmuir Waves with Conversion into Ion-Acoustic Waves 250

7. Induced Scattering of Transverse Waves into Transverse Waves 251
8. Induced Scattering of Langmuir Waves into Transverse Waves 253
Literature Cited 256

Chapter IX
Some Applications of Induced Wave Scattering in Plasma
1. Conversion of Longitudinal into Transverse Waves 257
2. Stabilization of Beam Instabilities by Induced Scattering of Langmuir Waves into Langmuir Waves 261
3. Acceleration of Electrons During the Development of Beam Instability 265
4. On the Stabilization of Beam Instabilities by Induced Scattering of Langmuir into Ion-Acoustic Waves 266
5. Stability of Relativistic Beams with Respect to Langmuir Wave Generation 269
6. Interaction Efficiency of Nonrelativistic Beams with Plasma 271
7. Quasistationary Spectra of Acoustic Oscillations Excited by an Electron Current 272
8. Induced Scattering Effects and Plasma Heating . . 275
9. Effective Collision Frequency for Particles with Waves in Induced Scattering 276
10. Ion Acceleration by Induced Wave Scattering . . . 276
11. Transfer of Langmuir Waves in Induced Scattering and the Acceleration of High-Energy Particles 277
Literature Cited 278

Chapter X
Current Trends in Research on Nonlinear Effects in Plasma
1. Development of Theory Based on the Kinetic Equations for Plasmons 281
2. Development of Research on the Nonlinear Dispersion Properties of Plasma 282
3. Development of the Theory of the Low-Frequency Nonlinear Characteristics of Plasma 288

4. Nonlinear Dispersion Characteristics of Plasma in the Field of a Fixed-Phase Wave 292
5. Large-Amplitude Nonlinear Waves 294
Conclusions. 296
Literature Cited 297

Appendix 1
Derivation of the Nonlinear Equations for Slowly Varying Amplitudes of the Interacting Fields 299

Appendix 2
Averaging of the Nonlinear Equations over the Phases of the Interacting Waves 303

Appendix 3
General Method for Calculating the Probabilities of the Decay, Emission, and Scattering of Waves 313

Appendix 4
Methods of Calculating the Nonlinear Dispersion Characteristics of a Plasma 321
Literature Cited in the Appendices 325
