Chapter 1. The Turbulent State of Matter: General Concepts	
1.1. A Definition of Turbulence . . . . .	1
1.2. A Statistical Description of Turbulence . . . . .	5
1.3. The Spectrum of Turbulent Fluctuations in an Incompressible Fluid . . . . .	11
1.4. Linear Collective Degrees of Freedom in Plasma. . . . .	16
1.5. Nonlinear Collective Plasma Motions. Strong and Weak Turbulence . . . . .	40
1.6. Fundamental Problems in the Physics of Turbulent Plasma. . . . .	45
1.7. Turbulent Plasma in Experiment and Nature .	49
Chapter 2. Basic Concepts of Turbulent Plasma Theory	
2.1. Statistical Ensemble Averages . . . . .	57
2.2. Linear Effects in Changes in the Distribution of Turbulent Plasma Fluctuations . . . . .	63
2.3. Nonlinear Interaction of Turbulent Plasma Fluctuations . . . . .	70
2.4. The Interpretation of Nonlinear Interactions of Turbulent Fluctuations as Induced Plasmon – Plasmon and Plasmon – Plasma Particle Scattering. . . . .	75
2.5. The Correlation of Turbulent Fluctuations in Plasma. . . . .	84

2.6.	The Quasilinear Approximation. . . . .	95
2.7.	Correlation of Turbulent Fluctuations and Its Effect on the Interaction with Plasma Particles . . . . .	103
2.8.	Turbulent Resonance Broadening of Particle – Plasmon Interactions . . . . .	110
2.9.	General Balance Equations for the Interactions of Particles and Turbulent Fluctuations ..	116
2.10.	Probability Calculations . . . . .	126
Chapter 3.	Collective Dissipation and Excitation of Turbulent Fluctuations	
3.1.	Collective Dissipation of Turbulent Fluctua- tions in Plasma . . . . .	139
3.2.	Turbulence Excitation Mechanisms . . . . .	150
3.3.	The Interaction of a Plasma and a Beam of Charged Particles . . . . .	153
3.4.	Excitation of Turbulence by Anisotropy and Loss-Cone Instabilities . . . . .	166
3.5.	The Excitation of Turbulence by a Constant Electric Field . . . . .	173
3.6.	Excitation of Turbulence in an Inhomogeneous Plasma. Drift Instabilities . . . . .	180
3.7.	The Excitation of Turbulence by Electromag- netic Waves and Lasers. . . . .	189
3.8.	The Generation of Turbulence in Cosmic Plasmas . . . . .	196
Chapter 4.	The Spectra of Stationary Plasma Turbulence	
4.1.	Types of Stationary Plasma Turbulence . . . . .	201
4.2.	Nonlinear Interactions and the Spectral Transfer of Energy of Langmuir Fluctua- tions in an Isotropic Plasma. . . . .	203
4.3.	The Spectra of Stationary Langmuir Turbulence in Isothermal Plasma . . . . .	208
4.4.	The Spectra of Low-Frequency Fluctuations Excited by Langmuir Turbulence in an Isothermal Plasma . . . . .	223
4.5.	Spectra of Langmuir Fluctuations in a Nonisothermal Plasma . . . . .	227
4.6.	Correlations and Nonlinear Frequency Shifts of Langmuir Fluctuations in Turbulent Plasma. . . . .	235

4.7. The Effect of Pair Collisions of Particles on the Correlations and Spectra of Langmuir Turbulence . . . . .	240
4.8. The Spectra of Ion-Acoustic Turbulence . . . . .	258
4.9. The Effect of a Magnetic Field on the Interactions and Spectra of Longitudinal Plasma Oscillations . . . . .	266
4.10. Spectra of Turbulence for Whistlers . . . . .	271
4.11. The Spectra of Magnetohydrodynamic Plasma Turbulence . . . . .	280
Chapter 5. Stochastic Particle Acceleration in Turbulent Plasma	
5.1. General Problems . . . . .	285
5.2. Stochastic Acceleration of Charged Particles by Langmuir Oscillations . . . . .	293
5.3. Stochastic Acceleration by High-Frequency Fluctuations in a Magnetoactive Plasma . . . . .	303
5.4. Stochastic Acceleration of Particles by High-Frequency Electromagnetic Radiation in a Magnetoactive Plasma . . . . .	309
5.5. Stochastic Particle Acceleration by Low-Frequency Ion-Acoustic Oscillations . . . . .	315
5.6. Acceleration by Alfvén Waves and Magnetoacoustic Oscillations . . . . .	319
5.7. Charged-Particle Acceleration due to Induced Scattering on Turbulent Fluctuations . . . . .	326
5.8. Effectiveness of Various Acceleration Mechanisms and Their Influence on Turbulence Spectra . . . . .	327
Chapter 6. Radiation from a Turbulent Plasma	
6.1. The Problem . . . . .	331
6.2. Radiation Processes and the Propagation of Electromagnetic Waves in Turbulent Plasma in Terms of the Stokes Parameters . . . . .	337
6.3. Emission of Radiation at Frequencies Close to $\omega_{pe}$ by Langmuir Turbulence . . . . .	350
6.4. Emission of Electromagnetic Waves by a Turbulent Plasma in an External Magnetic Field . . . . .	363
6.5. Radiation from Epithermal and Relativistic Particles in a Turbulent Plasma . . . . .	367

6.6. The Effect of Radiation from a Turbulent Plasma on the Spectra of Fast Particles. . .	380
Chapter 7. Propagation of Electromagnetic Waves through Turbulent Plasma	
7.1. The Problem . . . . .	387
7.2. General Scattering Theory . . . . .	391
7.3. Scattering of Electromagnetic Waves in Turbulent Plasma. . . . .	399
7.4. Amplification of Electromagnetic Waves Propagating in Turbulent Plasma . . . . .	404
7.5. Fluctuations in Intensities of Electromagnetic Waves when Propagating through Turbulent Plasma. . . . .	409
Chapter 8. Electromagnetic Properties of Turbulent Plasma	
8.1. General Statement of the Problem . . . . .	417
8.2. Expansions of Collision Integrals in Terms of the Turbulence Energy. . . . .	422
8.3. The Particle – Turbulent-Fluctuation Collision Integral: Summing The Series. . .	429
8.4. Dielectric Permeability for an Isotropic Turbulent Plasma. . . . .	435
8.5. Potential Instabilities of an Isotropic Turbulent Plasma. . . . .	440
8.6. Drift Instabilities in Turbulent Plasma. . . . .	445
8.7. Spontaneous Excitation of Magnetic Fields in Turbulent Plasma . . . . .	450
8.8. The Skin Effect in Turbulent Plasma . . . . .	453
8.9. Second Sound in Turbulent Plasma. . . . .	457
Chapter 9. Development of the Concepts of Strong Langmuir Turbulence	
9.1. Introduction . . . . .	461
9.2. Excitation of Strong Langmuir Turbulence. . .	463
9.3. Solitons and Cavitons. . . . .	472
9.4. Limits on the Applicability of Descriptions of Strong Nonlinear Motions and Spikons . . .	489
9.5. Soliton and Caviton Turbulence . . . . .	498

9.6. The Statistical Theory of Strong Langmuir Turbulence . . . . .	506
9.7. Conclusion. . . . .	523
References . . . . .	525
