Contents

Preface *vi*

chapter 1
What Is a Plasma? 1

chapter 2
Phase Space, Distribution Functions, and Average Values 8

2-1 Introduction *8*
2-2 Phase Space *8*
2-3 Distribution Functions *9*
2-4 Average Values *14*

chapter 3
Random Current Density and Kinetic Pressure 19

3-1 Introduction *19*
3-2 Random Current Density *20*
3-3 Kinetic Pressure *22*

chapter 4
The Equations of Plasma Physics 26

4-1 Introduction *26*
4-2 Maxwell's Equations *27*
4-3 Hydrodynamic Equations *28*
4-3-1 Introduction and Assumptions *28*
4-3-2 The Momentum Transfer Equations *28*
4-3-3 The Continuity Equations *31*
4-3-4 Discussion *33*
4-4 The Boltzmann Equation *33*
4-5 Current Densities and Charge Densities *37*

chapter 5
The Behavior of Charged Particles in Electric and Magnetic Fields 41

5-1 Introduction *41*
5-2 The Motion of Charged Particles in the Absence of Collisions *42*
5-2-1 Static Uniform Electric Field *42*
5-2-2 Static Uniform Magnetic Field *43*
5-2-3 Perpendicular Static Uniform Electric and Magnetic Fields *46*
5-2-4 The Motion of Guiding Centers *49*
5-2-5 Nonuniform Magnetic Fields *51*
5-2-6 The Spatially Uniform Time-varying Magnetic Field *61*
5-3 The Fluid Approach with Collisions *64*
5-3-1 Assumptions and General Derivation *64*
5-3-2 Uniform Static Electric Field *65*
5-3-3 Static Electric and Magnetic Fields. $\nu_c = 0$ *66*

5-3-4 Static Electric and Magnetic Fields with Collisions *66*
5-3-5 Polarization Drift. $\nu_c = 0$, $\omega \ll \omega_b$ *67*

chapter 6
Orbit Theory 72

6-1 Introduction *72*
6-2 The Principles and Validity of Orbit Theory *73*
6-3 Drift Velocities and Current Densities *76*
6-4 A Simple Stationary State *77*
6-5 A Simple Time-varying State *79*
6-6 Discussion *83*

chapter 7
The Interaction of Electromagnetic Waves with Plasmas 86

7-1 Introduction *86*
7-2 Equations and Analysis *86*
7-3 Results and Conclusions *91*
7-3-1 Plasma Propagation in the Absence of a Static Magnetic Field. $\nu_c = 0$ *91*
7-3-2 Plasma Propagation Perpendicular to a Static Magnetic Field. $E_y = E_x = 0$, $\nu_c = 0$ *93*
7-3-3 Plasma Propagation in the Direction of a Static Magnetic Field. $E_z = 0$, $\nu_c = 0$ *93*
7-3-4 Plasma Propagation with Collisions. $B_{0z} = 0$ *96*
7-4 The General Approach *97*
7-5 Assumptions and Consequences *98*

chapter 8
Magnetic and Kinetic Pressures 102

8-1 Introduction *102*
8-2 Derivation *102*
8-3 Discussion *106*

chapter 9
Plasma Sheaths and the Debye Length 108

9-1 Introduction *108*
9-2 The Plasma Sheath *110*
9-3 The Debye Length *113*

chapter 10
Collisions and Radiation 117

10-1 Introduction *117*
10-2 Collisions *117*
10-2-1 General *117*
10-2-2 Elastic and Inelastic Collisions *118*
10-2-3 Coulomb and Non-Coulomb Collisions *118*
10-2-4 Collision Cross Section, Mean Free Path, and Collision Frequency *119*
10-2-5 Collisions and the Equations of Motion: The Momentum Transfer Equation *125*
10-2-6 Collisions and the Equations of Motion: The Boltzmann Equation *128*
10-3 Radiation *130*
10-3-1 General *130*
10-3-2 Excitation and Recombination Radiation *131*
10-3-3 Bremsstrahlung *131*
10-3-4 Cyclotron Radiation *132*
10-3-5 Black-body Radiation *133*
10-3-6 The Observation of Radiation as a Diagnostic Technique *133*

chapter 11
Longitudinal Oscillations of Plasma Electrons 138

11-1 Introduction *138*
11-2 The Hydrodynamic Approach: Zero-temperature Theory *139*
11-3 The Boltzmann Equation Approach: Finite-temperature Theory *142*

chapter 12
Longitudinal Oscillations of Plasma Ions 147

12-1 Introduction *147*
12-2 Derivation *147*
12-3 Remarks *151*

chapter 13
Hydromagnetic Waves in Plasmas 153

13-1 Introduction *153*
13-2 Magnetoacoustic Waves *154*
13-3 Alfvén Waves *159*
13-4 Alternative Derivations *162*

chapter 14
Diffusion, Mobility, and Transport Phenomena 165

14-1 Introduction *165*

14-2 Diffusion and Mobility from the Momentum Transfer Equation *168*
14-3 Transport Theory: The Anisotropic Distribution Function *171*
14-4 Diffusion from the Boltzmann Equation *174*
14-5 Mobility from the Boltzmann Equation *176*
14-6 Heat Flow from the Boltzmann Equation *179*
14-7 An Equation for Particle Density *181*
14-8 Discussion *181*

chapter 15
The Pinch Effect 184

15-1 Introduction *184*
15-2 The Quasi-equilibrium Pinch *185*
15-3 The Dynamic Pinch *190*

chapter 16
Position-space Plasma Instabilities 194

16-1 Introduction *194*
16-2 Instabilities *194*
16-3 Discussion *199*

chapter 17
Velocity-space Plasma Instabilities 201

17-1 Introduction *201*
17-2 Growing and Decaying Longitudinal Plasma Oscillations *202*
17-3 Discussion *205*

appendix A
The Derivation of the Momentum Transfer Equation and the Continuity Equation from the Boltzmann Equation 209

appendix B
The Frictional-force Term and the Effective Collision Frequency 215

appendix C
Vector Relations 218

C-1 Vector Identities *218*
C-2 The Vector Quantity $(\mathbf{B} \cdot \nabla)\mathbf{A}$ *218*

appendix D
Elementary Tensor Operations 220

appendix E
Physical Constants 222

Index *223*
