

Contents

1	MODULATIONAL INTERACTIONS IN PHYSICS	15
1.1	Nonlinear phenomena and physics of plasmas	18
1.2	Plasma nonlinear response	22
1.2.1	Induced nonlinear charges	22
1.2.2	Synchronism conditions	24
1.2.3	Wave dispersion and nonlinear interactions	27
1.3	Virtual waves	29
1.3.1	Particle self-fields and virtual fields	29
1.3.2	Interaction of real and virtual waves	32
1.3.3	Effects of large virtual waves	35
1.4	Modulational interactions	39
1.4.1	Thresholds for domination	39
1.4.2	Plasma turbulence	42
1.4.3	Some historical comments	45
1.5	Content of the book	50
2	MODULATIONAL INTERACTION OF POTENTIAL ELECTRIC FIELDS	55
2.1	General nonlinear formalism	55
2.1.1	Real and virtual fields	55
2.1.2	Absence of ion sound	62
2.1.3	Ion-sound and strong Langmuir waves	66
2.2	Nonlinear responses	72
2.2.1	General expressions	72
2.2.2	Effective third-order response	74
2.2.3	Third-order responses for sound modulations . .	80
2.3	Envelope Langmuir fields	87

2.3.1	Equations for amplitude of field envelope	87
2.3.2	Elementary “hydrodynamic” approach	91
2.3.3	Conservation laws. Langmuir solitons	95
2.4	Instability of Langmuir pump wave	101
2.4.1	Dispersion equation	101
2.4.2	One-dimensional instability	105
2.4.3	Three-dimensional instability. Filamentation . . .	107
2.5	Nonlinearities of low-frequency field	110
2.5.1	General equations	110
2.5.2	Nearsonic solitons	113
2.5.3	Dissipative processes for nearsonic solitons	116
3	HIGHER NONLINEARITIES	119
3.1	Electron nonlinearities	119
3.1.1	Quasineutrality violation	120
3.1.2	Virtual waves on second harmonic	121
3.1.3	Frequency corrections	123
3.1.4	Thermal corrections	124
3.1.5	Complete expression for electron nonlinearities . .	127
3.1.6	One-dimensional case. Higher corrections	128
3.2	Relativistic nonlinearities	130
3.2.1	Relativistic corrections in second-order responses	131
3.2.2	Relativistic corrections in third-order responses .	133
3.2.3	Complete expression for relativistic corrections . .	134
3.3	Fifth-order effects	136
3.3.1	General expressions	136
3.3.2	Approximate expressions	137
3.3.3	Thermal corrections	140
3.3.4	Non-Maxwellian distributions	141
3.4	Fast solitary waves	144
3.4.1	Supersonic Langmuir solitons	144
3.4.2	Non-Maxwellian distributions and solitons in the fifth-order model	146
3.4.3	Non-Maxwellian distributions and solitons in the third-order model	149
3.5	Laser plasma accelerators	150
3.5.1	Plasma beatwave accelerator	152

3.5.2	Instability of relativistic plasma wave *	154
3.5.3	Relativistic modulational instability	157
4	STRONGLY NONLINEAR PLASMA WAVES	161
4.1	Perturbation theory	162
4.1.1	General relations	162
4.1.2	Cold plasma	164
4.1.3	Relativistic wave	168
4.1.4	Thermal corrections	171
4.1.5	Charge density and wave energy	174
4.2	Nonperturbative kinetic theory	175
4.2.1	Basic relationships	175
4.2.2	Plasma with $T_e \neq 0$	179
4.3	Ion-beam plasma system	185
4.3.1	Linear approximation	186
4.3.2	Nonlinear solution	187
4.4	Multi-component systems	193
4.4.1	Electron-positron-ion plasmas	193
4.4.2	Impurity-containing plasmas	198
5	EXCITATION OF MAGNETIC FIELDS	205
5.1	Magneto-modulational equations	206
5.1.1	General equation with virtual transversal wave	206
5.1.2	Nonlinear responses with virtual transversal fields	209
5.1.3	Equations for magneto-modulational interactions. Integrals of motion	211
5.1.4	Derivation from hydrodynamic equations	213
5.1.5	Qualitative comments	216
5.2	Instability of monochromatic pump wave	218
5.2.1	Dispersion equation	218
5.2.2	Low-temperature case	220
5.2.3	High-temperature case	221
5.2.4	Joint action of modulational and magneto-modulational instabilities	222

6	HOMOGENEOUS PLASMAS IN EXTERNAL MAGNETIC FIELD	229
6.1	Equation for lower-hybrid waves	230
6.1.1	Linear LH waves	230
6.1.2	General nonlinear formalism	232
6.1.3	Third-order responses	233
6.2	Monochromatic LH wave	238
6.2.1	Equation for modulational instability	239
6.2.2	“Short-scale” modulational instability	240
6.2.3	“Long-scale” modulational instability	244
6.2.4	Comparison with other nonlinear processes	246
6.3	LH solitons	248
6.3.1	Effective third-order response	248
6.3.2	Envelope solitons	252
6.3.3	Solitons in the case of transverse virtual fields	257
6.4	LH wave-particle interactions	261
6.4.1	Modulational instability and plasma heating	261
6.4.2	Modulational processes and current drive	263
6.4.3	Particle acceleration	270
7	BOUNDED AND INHOMOGENEOUS PLASMAS IN EXTERNAL MAGNETIC FIELD	275
7.1	Interactions in bounded plasmas	277
7.1.1	Linear dispersion relationships	277
7.1.2	Evolution equations	279
7.1.3	Instability of monochromatic pump. Solitons	282
7.1.4	Soliton acceleration	286
7.1.5	Solitons in inverse dispersion media	287
7.2	Modulational instability of LH drift waves	291
7.2.1	Basic relationships	291
7.2.2	Linear solutions	294
7.2.3	Nonlinear responses	296
7.2.4	Instability of monochromatic pump wave	299
7.3	Effects in magnetosphere plasmas	306
7.3.1	Effective collision frequency	307
7.3.2	Magnetopause width	311
7.4	Modulational interactions and active experiments	313

7.4.1	AMPTe barium release	314
7.4.2	Hydrodynamical LH drift instability	317
7.4.3	Modulational instability in AMPTe experiment	320
8	INSTABILITIES IN COLLISIONAL PLASMAS	327
8.1	Basic equations	328
8.1.1	Braginskii's system	329
8.1.2	Low-frequency linear solutions	331
8.1.3	Low-frequency dielectric permittivity	334
8.1.4	High-frequency linear solutions	336
8.2	Effective third-order response	338
8.2.1	Responses of second-order in wave field	338
8.2.2	Responses of third-order in wave field	344
8.3	Instability of Langmuir wave	347
8.3.1	Evolution equations	348
8.3.2	Dispersion equation	349
8.3.3	Instability rates	351
8.4	Coupled Langmuir and sound waves	356
8.4.1	Equations for wave fields	356
8.4.2	Quasi-stationary solution	359
8.5	Instability of electromagnetic waves	364
8.5.1	Instability in underdense plasmas	364
8.5.2	Combined effect of Joule heating, ponderomotive force, and relativistic nonlinearities	367
8.5.3	Highly collisional dusty plasmas	370
8.5.4	Effects of magnetic field	378
9	INSTABILITIES OF SURFACE WAVES	383
9.1	Hydrodynamics of bounded plasmas	387
9.1.1	Electron dynamics	387
9.1.2	Dispersion equation for surface waves	389
9.1.3	Surface currents	391
9.1.4	Other third-order effects	393
9.2	Kinetic theory of bounded plasmas	396
9.2.1	General nonlinear equations	396
9.2.2	Third-order plasma currents	401
9.2.3	Responses in semi-infinite plasmas	405

9.2.4	Plasma slabs and plasmas bounded by thin dielectric slabs	409
9.3	Modulational instability and solitons	412
9.3.1	Instability in semi-infinite plasmas	412
9.3.2	Solitons in semi-infinite plasmas	419
9.3.3	Solitons in plasma slabs and plasmas adjacent to thin dielectric slabs	422
9.3.4	Coupled solitons in plasma slabs	425
10	TWO MONOCHROMATIC PUMP WAVES	429
10.1	Interaction of two pumps	430
10.1.1	Interference terms	430
10.1.2	Steady-state solutions	433
10.1.3	Modulational matrix	436
10.2	Pumps with large frequency gap	438
10.2.1	Frequency analysis	438
10.2.2	Basic expressions	440
10.2.3	Zero-approximation	443
10.2.4	Equations for modulational perturbations	445
10.3	Instability rates	447
10.3.1	Nonlinear frequency shift	447
10.3.2	Modulational perturbations	450
10.3.3	Growth rates for two Langmuir pumps	454
11	MODULATIONAL PROCESSES AND WEAK PLASMA TURBULENCE	459
11.1	Weak turbulence approximation	461
11.1.1	Basic equations	462
11.1.2	Induced scattering	465
11.1.3	Decay processes	467
11.1.4	Phase correlations	469
11.2	Instability equations	472
11.2.1	General relationships	472
11.2.2	Regular and random fields	474
11.2.3	Perturbations of correlation functions	477
11.3	Instability of wave packets	481
11.3.1	One-dimensional equations	481

11.3.2	One-dimensional instability rates	484
11.3.3	Correlation functions in isotropic case	488
11.3.4	Isotropic instability rates	490
11.4	Instability thresholds	491
11.4.1	Narrow wave packets	493
11.4.2	Broad wave packets	496
11.4.3	One-dimensional situation	499
11.5	WKB-Ansatz	500
11.5.1	Energy principle	501
11.5.2	One-dimensional problem	504
11.5.3	Applicability limits	505
11.5.4	Concluding remarks	508
