

CONTENTS

Introduction and summary	2
1 General theory of irreversible processes in gases	
1-1 The Theories of Boltzmann and Gibbs	11
1-2 Explicitly Irreversible Theories	17
1 The Master Equation in Classical Theory	19
2 The Quantum Theory of Irreversible Processes	23
2 The Boltzmann and Fokker-Planck equations for irreversible processes in gases	
2-1 The Boltzmann Equation	31
2-2 The “Equation of Change” and the Conservation Equations	34
2-3 Solution of the Boltzmann Equation	38
1 Solution of the Inhomogeneous Integral Equation (2-36)	42
2 Grad’s Method of Thirteen Moments	45
2-4 Basic Assumptions and Limitations of the Boltzmann Equation	47
2-5 The Fokker-Planck Equation	51
2-6 Relation Between the Boltzmann and the Fokker-Planck Equations	53
2-7 The Bhatnagar-Gross-Krook Equation	54
3 Theories of Bogoliubov and of Frieman and Sandri	
3-1 The Kinetic Equation and Irreversibility	58
The kinetic equation 58 · Irreversibility 60 · Summary of existing investigations 61 ·	
3-2 The B-B-G-K-Y Hierarchy of Equations and the Hydrodynamical Equations	62
3-3 The Basic Ideas of the Bogoliubov Theory	66
3-4 The Kinetic Stage $\tau_0 < t < t_0$	68
Integration of the equation of motion; the operator z 68 · Density expansion <i>ansatz</i> 70 · The “functional <i>ansatz</i> ” 72 · The “initial conditions”: the introduction of a time arrow 73 · Solution of the fundamental equations 77 · First approximation: the generalized Boltzmann equation 80 ·	
3-5 The Equilibrium State	84

3-6	Theory of Frieman and Sandri: the Kinetic Stage	86
1	No Correlations at an Initial Instant	88
2	Arbitrary Correlations at an Initial Instant	92
3-7	Theory of Frieman and Sandri: the Hydrodynamical Stage	93
3-8	Divergence Difficulty of Density Expansion	97
4	Bogoliubov's theory: work of Choh and Uhlenbeck on the hydrodynamical stage	
4-1	Introductory Remarks	105
4-2	Expansion of $F_2^{(k)}$ and $A^{(k)}$ for Short-Range Interactions	109
4-3	The Basic Equations of the Hydrodynamical Stage	113
4-4	Solution of the Basic Equations	118
	Order ξ^0 118 · Order ξ^1 121 · Order n (or, $1/v$) 122 · Order n^2 (or $1/v^2$) 122 ·	
4-5	Results of the Theory: Summary	124
5	Kinetic equation for ionized gases: theory of Vlasov and Landau	
5-1	Introductory Remarks	127
5-2	Theory of Vlasov	128
1	Approaches to Vlasov's Equation	128
2	Relativistic Vlasov Equation for High-Temperature Plasmas	130
5-3	Some Stationary-State Solutions of the Vlasov Equation	132
1	Uniform Spatial Distribution	133
2	Periodic (Spatial) Solution and Crystallization	135
	Linear approximation 135 · Nonlinear theory 136 ·	
5-4	Time-Dependent Solutions: Plasma Oscillations	138
1	Van Kampen's Method	138
2	Approximate Method	144
5-5	Landau Damping; Landau's Treatment	147
5-6	Stability of Plasma Oscillations	154
6	Kinetic equation of plasmas on the basis of Bogoliubov's theory	
6-1	The Boltzmann Equation and the Fokker-Planck Equation	159
6-2	Extension of Bogoliubov's Theory to Plasmas	162
6-3	Theory of Guernsey and Lenard	164
1	Vlasov Approximation: $m = 0$, all n	167
2	Bogoliubov's "Generalized Boltzmann Equation"	168
3	Lenard-Guernsey: First Approximation; $m = 1$ and all Orders n	170
4	Divergence-Free Approximation	172
6-4	Homogeneous Plasmas: Guernsey's Treatment	172
	Kinetic equation 172 · Two-particle correlation F_2' and Debye-Hückel screening 181 · Stability of plasmas 182 ·	
6-5	The Equilibrium Distribution and the H -Theorem	183
	The H -theorem 183 · Equilibrium distribution $F_2(y_1, y_2)$ 185 · Divergence difficulty 191 · Appendix: Debye-Hückel theory 193 ·	
6-6	Justification of Using Boltzmann's Equation With the Debye Screened Potential	195
6-7	Solution of the Kinetic Equation (6.88b) and the Spectrum of Relaxation Times	198
6-8	Relation Between the Guernsey-Balescu-Lenard Equation (6.88b) and the Fokker-Planck Type Equation	203

7 Kinetic equation of plasmas: other theories	
7-1 Introductory Remarks	207
7-2 Theory Based on Cluster Expansions	207
Kinetic equation 207 · Equilibrium case 212 · Spatially homogeneous plasmas 213 · Small deviations from equilibrium 214 · Approximate equation 217 · Other approximate treatments 221 ·	
7-3 Theory of Frieman and Sandri	222
7-4 Attempts to Remove the Divergence at $r_{12} = 0$	227
8 Inhomogeneous plasmas	
8-1 Spatially Inhomogeneous Plasmas	232
8-2 Transport Properties of a Plasma With No External Fields	240
9 Plasmas in electric and magnetic fields	
9-1 Introductory Remarks	247
9-2 Kinetic Equation in Static Electric and Magnetic Fields	249
1 Homogeneous Plasmas in Magnetic Fields	252
2 Inhomogeneous Plasmas in Magnetic Fields	261
9-3 Magnetohydrodynamic Equations	262
10 The theory of Prigogine and Balescu	
10-1 Introductory Remarks	271
10-2 Distribution Functions and Their Fourier Components	272
10-3 Liouville Equation in Fourier Transforms: Diagrams	275
10-4 Asymptotic Dependence of the Diagrams on N , Ω and t	280
1 N -, Ω -Dependence	280
2 Time Dependence	281
10-5 Initial Conditions	287
10-6 Irreversibility	287
10-7 Time Scales	288
10-8 Two-Particle Distribution Function	289
10-9 Kinetic Equation of Plasmas	291
