## The Theory and Application of the Padé Approximant Method

*George A. Baker, Jr.*

I. Introduction	1
II. Formal Convergence Theory	3
III. Special Function Examples	27
IV. Some Applications to Physical Problems	34
V. Generalization of the Padé Approximant Method to Include Information at Two or More Points	54
References	56

## Theory of the Giant Dipole Resonance

*W. Brenig*

I. Introduction	59
II. Experimental Methods and Results	60
III. Expressions for Cross Sections	66
IV. The Response Function	76
V. Sum Rules and Mean Energies	78
VI. The Liquid Drop Model	81
VII. The Shell Model	91
VIII. The Extended Shell Model	93
IX. Effective Forces and “Renormalization”	96
X. Numerical Results	101
XI. The Width of the Giant Resonance	106
References	112

## The Optical Model

*Alexander L. Fetter and Kenneth M. Watson*

I. Introduction	115
II. Formal Properties of the Optical Model	117
III. Optical Model for High Energy Scattering	139
IV. Generalizations of the Optical Potential	162
V. The Optical Potential at Low Energy	164
VI. The Optical Potential in the $T$ Approximation	177
References	191

**Hydromagnetic Equilibrium and Stability***John M. Greene and John L. Johnson*

I. Introduction	195
II. Equilibria	199
III. Stability	222
IV. Fields of Future Interest	240
References	242

**The Heavy Ion Transfer Reaction***K. R. Greider*

I. Introduction	245
II. Formal Theory	250
III. Evaluation of Matrix Elements	262
IV. Discussion and Comparison of the DWBA and the TMA	268
V. Extensions of the Theory	276
VI. Summary	280
References	281

**Elastic Scattering of Electrons by Atoms***Marvin H. Mittleman*

I. Introduction	283
II. The Equivalent Potential Formalism	286
III. Inclusion of the Pauli Principle	299
IV. Numerical Techniques and Results	308
V. Generalizations of the Equivalent Potential	312
References	314
