

CONTENTS

<i>Preface</i>	viii
<i>Periodic Table</i>	x
<i>Table of Units</i>	xi
<i>Chapter 1.</i> INTRODUCTION	1
<i>Chapter 2.</i> NATURE, STRUCTURE, STATE AND GENERATION OF PLASMA PARTICLES	5
2.1. Neutral atoms and molecules	5
2.2. Positive ions	6
2.3. Negative ions	10
2.4. Ionization and excitation of atoms and the Periodic Table	11
2.5. Molecular states and electric dipoles	18
2.6. Change in energy state by absorption of radiation in gases	23
2.7. Emission of charged and neutral particles from solids	25
<i>Chapter 3.</i> COLLISIONS, CROSS-SECTIONS AND FREE PATHS	32
3.1. Introduction	32
3.2. Free paths	36
3.3. Collisions between two ions	38
3.4. Collisions between two neutral particles	39
3.5. Evaporation into vacuum and gas	53
<i>Chapter 4.</i> MOTION OF CHARGED PARTICLES IN ELECTRIC AND MAGNETIC FIELDS	55
4.1. Motion of charged particles <i>in vacuo</i>	55
4.2. Motion of charged particles in gases	68
4.3. Motion of charged particles in plasmas	84
<i>Chapter 5.</i> ELECTROMAGNETIC, ELECTRON AND ION WAVES: OSCILLATIONS IN PLASMAS	94
5.1. Electromagnetic and light waves interacting with a plasma	94
5.2. Electron plasma resonance frequency	95
5.3. Ion plasma resonance frequency	97

5.4.	Electron waves	101
5.5.	Electromagnetic waves of low and high intensity	101
5.6.	Plasma waves in magnetic fields	103
<i>Chapter 6.</i>	NATURE AND PROPERTIES OF PLASMAS	105
6.1.	Introduction	105
6.2.	Production of a plasma.	106
6.3.	General physical properties of the plasma	108
6.4.	Dielectric properties	111
6.5.	Optical properties	114
6.6.	Electric conduction	115
6.7.	Thermal conductivity	117
6.8.	Magnetic susceptibility	118
6.9.	Acoustic effects	120
<i>Chapter 7.</i>	PRODUCTION OF DISCHARGES AND PLASMAS; DIAGNOSTICS	121
7.1.	General comments	121
7.2.	Evolution of a discharge	121
7.3.	The Townsend discharge and the electric breakdown	122
7.4.	Ionization coefficient and ionization cross-section	127
7.5.	Genesis and properties of a glow discharge	130
7.6.	The abnormal glow discharge	135
7.7.	Charge and energy losses in the positive column at low pressure	139
7.8.	Quiescent plasmas	145
7.9.	Plasma diagnostics	147
7.10.	Anomalous plasma resistivity	156
7.11.	Arc discharges	158
<i>Chapter 8.</i>	MISCELLANEOUS EFFECTS INVOLVING DISCHARGES AND PLASMAS	165
8.1.	Gas explosions initiated by micro-sparks	165
8.2.	Protection against lightning	165
8.3.	Corona discharges for paint spraying and xerographic copying	166
8.4.	Corona discharges for separating particles	167
8.5.	Isotope separation by lasers	168
8.6.	Gas dynamic high-voltage generation	168
8.7.	Electric precipitation	169
8.8.	Gas discharge displays	172
8.9.	Flame radiation detection	173
	<i>Chapter 9.</i> NUCLEAR FUSION PLASMAS	175
	<i>Chapter 10.</i> CHEMICAL CHANGES IN DISCHARGES AND PLASMAS	185
10.1.	General considerations	185
10.2.	The synthesis of water from H ₂ and O ₂	189
10.3.	Synthesis of ozone and dissociation of oxygen	191
10.4.	Dissociation of hydrogen	195
10.5.	Dissociation of nitrogen	197
10.6.	Dissociation of carbon dioxide	199
	<i>Chapter 11.</i> WELDING AND PROCESSING MATERIAL USING DISCHARGES	202
11.1.	Glow discharge beam welding	202
11.2.	Arc discharge welding and cutting	205
11.3.	Laser welding and cutting	210
11.4.	Spark erosion machining	215
	<i>Chapter 12.</i> ATMOSPHERIC AND COSMIC PLASMAS	216
12.1.	General remarks	216
12.2.	The Sun and the solar plasma	217
12.3.	The weak plasma of the ionosphere	218
12.4.	Lightning discharges and thunderstorms	226
	<i>Further Reading</i>	229
	<i>Index</i>	239
