Contents

Introduction 1

1 Principles of Special Relativity **10**

1.1 Introduction 10
1.2 The physical basis for special relativity 11
1.3 Kinematics 13
1.4 Lorentz contraction 15
1.5 The transformation of volume and area 17
1.6 The transformation of particle density 18
1.7 The transformation of mass 18
1.8 The transformation of force 19
1.9 Power and kinetic energy 19
1.10 The transformations of energy, momentum, and power . 21
1.11 The Doppler shift 21

2 The Electrodynamics of Moving Media **24**

2.1 Introduction 24
2.2 Maxwell's equations 26
2.3 The Maxwell-Lorentz transformation 28
2.4 The constitutive equations 33
2.5 Boundary conditions 42
2.6 Induced electromotive force 50
2.7 The scalar and vector potential 65
2.8 The Poynting vector 67
2.9 Terminal voltage related to the Poynting vector . . . 71
2.10 Phasor notation 73
2.11 The complex Poynting vector 74

3 The Electromagnetic Body Force **82**

3.1 Introduction 82
3.2 The Lorentz force on a charged particle 82
3.3 The body force and its transformation 86

3.4 The form of the body force in a fluid 87
3.5 The stress tensor formulation of the body force . . . 89
3.6 The stress tensor and principal stresses 93
3.7 Principal stresses including striction effects 95
3.8 Force density in magnetofluidmechanics 96
3.9 Forms of the stress tensor for reference 97
3.10 Summary 97

4 The Fluid Equations—Basic Ideas of Viscous Flow in Magnetohydrodynamics 101

4.1 Introduction 101
4.2 The fundamental equations of viscous flow 102
4.3 Flow under the action of electromagnetic body forces . 106
4.4 Some comments on boundary conditions 107
4.5 Terminal voltage and equivalent circuits 108
4.6 Forms of the basic equations for reference 110
4.7 Strain rate tensor and stress tensor relationships for reference 116

5 The Fluid Equations—Energy and Thermodynamics 118

5.1 Introduction 118
5.2 Thermodynamics of incompressible fluids 119
5.3 Thermodynamics of compressible fluids 123
5.4 Energy equation of magnetohydrodynamics 125
5.5 Energy equation in terms of enthalpy 130
5.6 Energy equation for a perfect gas 131
5.7 Energy equation in terms of entropy 131
5.8 The second law and irreversible thermodynamics. . . 132
5.9 Extension to dispersive and nonlinear media 132
5.10 The mechanical energy equation and combination with the thermodynamical relationships 134
5.11 Forms of the dissipation function for reference . . . 136

6 The Fluid Equations—Magnetohydrodynamic Approximations, Equations, and Parameters 140

6.1 Introduction 140
6.2 The general magnetofluidmechanic problem 140
6.3 The MHD approximation 144
6.4 Equations under the MHD approximation 148

6.5 Dimensional and inspectional analysis. 150
6.6 Normalization of the MHD equations and fundamental parameters. 152
6.7 Observations on conductivity 155
6.8 Very high-frequency phenomena 156
6.9 Magnetic transport 157
6.10 Alfvén waves 159
6.11 Bernoulli's equation in MHD 161
6.12 Kelvin's circulation theorem in MHD 162
6.13 The static MHD pinch 163
6.14 A note on units 164

7 Incompressible Viscous Magnetohydrodynamic Flow 167

7.1 One-dimensional MHD Poiseuille flow 167
7.2 Magnetic field boundary conditions 183
7.3 One-dimensional MHD Couette flow 188
7.4 Two-dimensional MHD channel flow 195
7.5 Rectangular channel with insulating walls. 203
7.6 Rectangular channel with ideally conducting walls . . 215
7.7 Rectangular channel with conducting wall perpendicular to the applied magnetic field 228
7.8 MHD flow in circular cross section pipes 241
7.9 Two-dimensional MHD Couette flow in an insulating channel. 247
7.10 Flow between two coaxial rotating cylinders with a radial magnetic field 254
7.11 Very viscous flow and applications. 259
7.12 Magnetohydrodynamic lubrication flow between parallel rotating discs 260
7.13 An electrically controlled MHD viscous coupler . . . 268
7.14 The magnetohydrodynamic inclined slider bearing with a transverse magnetic field. 272
7.15 The magnetohydrodynamic inclined slider bearing with a tangential magnetic field. 281
7.16 The application of the MHD pinch to a thrust bearing . 287

8 Plane Waves in Fluids 299

8.1 Introduction 299
8.2 Plane waves in a perfect gas. 302
8.3 Plane waves in liquids 318

8.4 Plane waves including displacement current 320
8.5 Transverse waves in a moving fluid 331
8.6 Interactions at a fluid interface 337
8.7 Interaction at the interface of a moving fluid in the presence of a magnetic field 342
8.8 Interaction at a moving interface of a moving fluid in the presence of a magnetic field 347
8.9 Experiments—studies of MHD waves 353
8.10 Conclusions 353

9 Transient and Alternating Incompressible Viscous MHD Flow . 360

9.1 Introduction 360
9.2 An electrodynamic plate problem 361
9.3 Time-varying two-dimensional MHD channel flow . . 370
9.4 Oscillating MHD one-dimensional Poiseuille flow . . 375
9.5 Transient MHD one-dimensional Poiseuille flow. . . 385
9.6 The Rayleigh problem in magnetohydrodynamics . . 399
9.7 Transient MHD flow in a rectangular channel with conducting walls perpendicular to the applied magnetic field. 428
9.8 The development of MHD Poiseuille flow in an infinite channel. 435

10 Discontinuities and Shock Waves 450

10.1 Introduction 450
10.2 Normal MHD shocks 452
10.3 Oblique shocks and discontinuities. 457
10.4 Oblique shock solutions 461
10.5 The Rayleigh line diagram 466
10.6 Stress tensor formulation 471
10.7 Shock structure 473
10.8 Conclusions 473

11 One-Dimensional Compressible Flow 477

11.1 Introduction 477
11.2 One-dimensional channel flow 478
11.3 Negative E_z pump-generator mode. 485
11.4 Constant area flow, $Q = 0$, E_z/B_0 negative 489
11.5 Channels of varying area 495

11.6 The constant area generator. 497
11.7 The vortex generator. 505
11.8 MHD thermal convection 516

12 Magnetoaerodynamics 530

12.1 Introduction 530
12.2 Qualitative description of magnetohydrodynamics . . 533
12.3 Small conductivity, $Rm \ll 1$ 543
12.4 Large conductivity, $Rm \gg 1$ 549
12.5 Perturbation theory of thin airfoils. 561
12.6 Boundary layer theory 568
12.7 Hypersonic flow 578

13 Waves in Bounded Media 582

13.1 Introduction 582
13.2 Transverse wave propagation between parallel plates . 583
13.3 Pressure wave propagation between parallel planes . . 597
13.4 Electromagnetic induction pumping 601
13.5 Induction stirring in furnaces 606

Appendix 1. **Tables of Properties and Constants 617**

Appendix 2. **Relativistic Formulation of Magnetohydrodynamics . 623**
