

CONTENTS AND SUBJECT INDEX

1. INTRODUCTION AND HISTORY	1
Historical Background	1
World Development	2
Special Applications	3
MHD Technology	4
MHD Generators as Heat Engines	4
MHD Heat Sources	6
MHD Cycles	7
Plasma Instabilities	7
Commercial Application of Open-Cycle Systems	8
Steam and Air Turbine Cycles	8
Costs of MHD-Steam Power Plants	10
Pollution-Control Features	10
Fuels for MHD Power Systems	11
MHD for Peak Power Applications	11
U.S. Research	12
Military Applications	12
Avco Work	13
Future Prospects	13
R&D in Other Countries	14
References	14
2. SOVIET MHD DEVELOPMENT	15
Technological Approaches	15
Differences in U.S.S.R. and U.S. Approaches	16
The Soviet U-02 Pilot Plant	17
The U-25 Pilot Plant	17
Design	17
Gas Dynamic Analyses	18
Oxidant Preparation System	21
Combustion Chambers	23
MHD Generator Channel	24
Steam Generator	38

Monitoring and Control System	39
Generator Design	39
Breakdown Theory	41
Predictions of Power Generation	41
Soviet Materials Testing	42
Enin-2 Test Facility	42
Kiev Test Facility	43
Comparison of U.S. and U.S.S.R. Facilities	44
Soviet Closed-Cycle MHD	44
Closed-Cycle Liquid Metal MHD in U.S.S.R.	46
U.S.S.R. Program Objectives	48
Conclusions	49
U.S. and U.S.S.R. State of the Art	51
Superconducting Magnet Sent to Soviets	52
References	52
3. WESTINGHOUSE OPEN-CYCLE MHD STUDY	54
Background	54
Parameters	55
Base Case 2	56
Variations on Base Case 2	62
Base Case 3	66
Variations on Base Case 3	68
Base Case 1	71
Variations on Base Case 1	76
Efficiency Calculations	78
Cost Calculations	79
Natural Resource Requirements	79
Capital and Installation Costs of Plant Components	79
Major Components for Three Base Cases	80
Balance of Plant	80
Analysis of Overall Cost of Electricity	80
Direct Coal Fired System (Base Case 2)	83
Integrated LBtu Gasifier (Base Case 3)	83
Carbonized Coal-Burning System (Base Case 1)	84
Variation of Parameters of Base Systems	84
Conclusions and Recommendations	84
Conclusions	84
Recommendations	85
References	85
4. GENERAL ELECTRIC OPEN-CYCLE MHD STUDY	86
Description of Cycle	86
Parameters	87
Analytical Procedures and Design Assumptions	93
Working Fluid	93
MHD Combustor	93
MHD Generator	93
High-Temperature Preheater	96
Cost Basis	100
Combustor	100
MHD Channel Assembly	100
Superconducting Magnet	100

High-Temperature Preheater	101
Seed Recovery and Processing	103
Results	103
Recommended Case	108
5. WESTINGHOUSE CLOSED-CYCLE MHD STUDY	109
Background	109
Parameters	110
Cycle and Component Description	110
Parametric Point Selection	115
Calculating Efficiency	118
Results of the Parametric Study	119
Capital and Installation Costs of Plant Components	123
Conclusions and Recommendations	124
References	125
6. GENERAL ELECTRIC CLOSED-CYCLE MHD STUDY	127
Description of Cycle	127
Parameters	128
Cycle Description	130
Base Case 1	131
Base Case 16	132
Base Case 3	134
Design Assumptions	134
Coal-Fired Applications	135
Parameter Variations	137
Argon and Cesium Purification	137
Generator Sizes	139
Cost Analysis	140
Results	141
Recommended Case	146
7. WESTINGHOUSE LIQUID-METAL MHD STUDY	147
Summary	147
Background	148
Parameters	150
Selection of Parametric Study Points	150
Discussion of Study Parameters	152
Description of LM-MHD/Steam Binary Cycle Configuration	152
Assumptions	159
Methodology	160
Results of the Parametric Study	160
Summary Tables	160
Description of Parametric Points	163
Analysis of LM-MHD/Steam Binary Plant Performance	164
Capital and Installation Costs of Plant Components	165
Cost Methodology	165
MHD Duct and Magnet Costs	165
Liquid-Metal Pumps and Subsystems Costs	167
Heat Transfer Equipment Costs	168
Costs of Gas Compressors and Motor Drives	169
Steam Turbine/Generator Costs	169
Sizing and Cost Algorithm Computer Program	169

Contents and Subject Index

Component Installation Costs	169
Summary of Component Costs for LM-MHD Study Cases.	171
Analysis of Overall Cost of Electricity.	172
Comparison of the Cost of Electricity for LM-MHD/Steam	
Binary Power Plant	172
All MHD Power Plants.	175
Conclusions and Recommendations	175
References.	178
8. GENERAL ELECTRIC LIQUID-METAL MHD STUDY.	180
Description of Cycle	180
Parameters.	181
Design Assumptions	184
MHD Generator.	184
Integrated Systems Model	185
MHD Component Designs	188
Design and Cost Basis	191
Results	192
Recommendations.	195
References.	196
9. H₂-O₂ COMBUSTION POWERED STEAM MHD SYSTEMS	197
Introduction	197
Cost Calculations.	198
Fuel Cost Projections	198
Energy Transportation Costs.	198
Oxygen Costs	201
Steam MHD System Performance	202
Capital and Operating Costs for Steam MHD Systems.	204
Comparison of Power Systems	206
Conclusions.	207
References.	209
10. SUMMARY OF MHD STUDIES	211
Review	211
ECAS Study of MHD	212
Summary of Performance and Costs for MHD Systems.	214
Open-Cycle MHD Systems.	214
Closed-Cycle, Inert-Gas Magnetohydrodynamic Systems.	215
Liquid-Metal Magnetohydrodynamic Systems.	215
Comparison of MHD Systems with Alternative Plants Studied	216
Open-Cycle Task 2 MHD Conceptual Plant Design	219
Performance and Cost	225
Conclusions.	228
References.	228
BIBLIOGRAPHY	229
