

CONTENTS

PREFACE	ix
---------	----

ONE · TECHNIQUES

1:1	The development of the subject	1
1:2	Dimensional analysis	3
1:3	Vector analysis	5
1:4	Normal modes of oscillation and instability	12
1:5	Variational methods and instability	20
1:6	Linearizing an expression	24
1:7	Tensors	26
	Exercises I	32

TWO · FUNDAMENTAL IDEAS IN HYDRO- STATICS AND HYDRODYNAMICS

2:1	Introduction	39
2:2	The equations of inviscid hydrodynamics	40
2:3	Hydrostatics and the equilibrium of gases	47
2:4	Steady motion of incompressible inviscid liquids	50
2:5	Viscous motion	63
2:6	Compressible fluids	67
2:7	Surface waves	79
	Special references for Chapter II	83
	Exercises II	84

THREE · ELECTROMAGNETIC EFFECTS

3:1	Maxwell's equations	89
3:2	The Lorentz force and its transformations	91
3:3	Ohm's Law	95
3:4	The induction equation	97
3:5	The mechanical equations	98
3:6	The Poynting vector	98
3:7	The boundary conditions	103
3:8	Simplification of the magnetohydrodynamic equations by dimensional analysis	110
3:9	The motion of tubes of force in a perfectly conducting medium	112
3:10	Dynamical principles	115
	Exercises III	115

FOUR · MOTION OF A FLUID IN A
UNIFORM MAGNETIC FIELD

4:1	Alfvén waves	121
4:2	Reflection and transmission of Alfvén waves at a discontinuity in the density	125
4:3	The acoustic and hydromagnetic modes of wave propagation in an infinitely conducting plasma	127
4:4	Hydromagnetic oscillations	130
4:5	Fitting an external magnetic field	133
4:6	Dispersion of surface currents when there is a normal magnetic field	136
4:7	Effects of finite conductivity on hydromagnetic waves	138
4:8	Hydromagnetic waves in a uniformly rotating liquid	141
	Exercises IV	144

FIVE · STEADY STATES AND EQUILIBRIUM
CONFIGURATIONS

5:1	Magnetohydrostatic equilibrium	148
5:2	Simple equilibrium states	149
5:3	A variational property of the magnetic field	153
5:4	Similarities between magnetohydrostatic equilibria and hydrodynamic steady states	155
5:5	Magnetohydrodynamic steady states of an inviscid infinitely conducting fluid	158
5:6	Corpuscular flux problems	159
5:7	Laminar flow of a conducting viscous liquid between parallel walls with a transverse magnetic field	166
	Exercises V	170

References for Chapters III, IV and V	174
