Foreword	xi
Introduction.....	xiii

Chapter 1 Engineering Technical Problems of Developing MHD Power Plants

1.1	Introduction.....	1
1.2	Present Stage of Investigations and Future Developments.....	3
1.2.1	Future Application of MHD Conversion in Power Generation.....	5
1.2.2	Basic Results of Investigations of the Development of the First Commercial-Scale, Coal-Combusting, MHD Energy System in the U.S.S.R....	12
1.2.2.1	The U-02 Facility.....	12
1.2.2.2	The U-25 Experimental, Commercial-Scale Facility.....	14
1.2.2.3	U-25B Facility.....	28
1.2.3	Investigations of Certain MHD Facilities Intended for Other Purposes.....	29
1.2.4	Development of the First Commercial-Scale MHD Power Plant.....	32
1.3	Thermal Loops and Layout of MHD Power Systems.....	33
1.3.1	Thermodynamic and Basic Thermal Schemes of an MHD Facility.....	34
1.3.2	Systems Plan.....	35
1.3.3	Methods of Obtaining High Initial Temperature.....	37
1.3.4	Using Generator Exhaust Gas Heat in Low-Temperature Cycles.....	40
1.3.5	Preheating and Oxygen Enrichment of Oxidizer in Binary MHD Power Systems.....	43
1.3.6	Compression of the Oxidizer.....	51
1.3.7	Methods of Utilizing Low-Potential Heat.....	54
1.3.8	System and Layout of the MHD Power System.....	57
1.4	Engineering Problems of Developing an MHD Power System.....	62
1.4.1	Combustor	62
1.4.2	MHD Generator Channel.....	68
1.4.3	Superconducting Magnet System.....	73
1.4.4	Inverter System.....	77
1.4.5	Oxidizer Preparation System.....	80
1.4.5.1	High-Temperature Air Preheaters.....	80

1.4.5.2	Oxidizer Compression.....	84
1.4.5.3	Oxygen Enrichment of Air.....	84
1.4.6	Steam Generator.....	85
1.4.7	Seed System.....	90
1.4.8	Protection of the Biosphere.....	94

Chapter 2 Calculation of MHD Channel Flows

2.1	Introduction.....	105
2.2	Axial (Longitudinal) Problems of Electrodynamics.....	106
2.2.1	Variational Problem of Electrodynamics.....	106
2.2.1.1	Formulation of the Variational Problem.....	107
2.2.1.2	Variational Problems of the End Effect in an MHD Channel.....	113
2.2.2	Numerical Solution of Linear Electrodynamic Problems.....	122
2.2.2.1	Problem Formulation and Parametrization of Numerical Solution.....	122
2.2.2.2	Optimal Loading of an MHD Channel.....	127
2.2.2.3	The Effects of Nonuniform Loading of a Segmented MHD Channel.....	139
2.3	Traverse Electrodynamic Problems.....	148
2.3.1	Problem Formulation.....	149
2.3.2	Variational Problem of the Potential and Current Distribution over the Cross Section of an MHD Channel.....	152
2.3.2.1	Problem Formulation.....	152
2.3.2.2	Optimal Potential Distribution in the MHD Channel.....	156
2.3.3	The Influence of Plasma Nonuniformities on the Characteristics of Frame MHD Channels.....	161
2.3.3.1	Problem Formulation.....	161
2.3.3.2	Integral Nonuniformity Parameters.....	163
2.3.3.3	Rectangular Channel with One-Dimensional Conductivity Nonuniformity.....	170
2.3.4	Numerical Analysis of Electrodynamics in the Cross Section of a Frame MHD Channel.....	174
2.3.4.1	Problem Formulation and the Method of Solution.....	175
2.3.4.2	Rectangular Channel.....	176
2.3.4.3	Oval Channel.....	181
2.4	Two-Dimensional Inviscid Flows in an MHD Channel.....	183
2.4.1	Problem Formulation.....	183
2.4.2	Supersonic MHD Flows.....	186

2.4.3	Subsonic MHD Flows.....	192
2.5	Quasi-One-Dimensional (Hydraulic Approximation and Engineering Methods of Calculating Flow Parameters in an MHD Generator Channel.....	198
2.5.1	The Basic Equations of the Quasi-One-Dimensional Approximation.....	199
2.5.2	Gasdynamic Structure of the Model.....	202
2.5.3	Calculation of Friction and Heat Transfer.....	205
2.5.4	Electrodynamic Flow Model for an MHD Generator Channel.....	209
2.5.5	Incorporating Certain Real Effects.....	219
2.5.5.1	The Effect of Finite Segmentation.....	220
2.5.5.2	Discharge Constriction at the Electrode.....	223
2.5.5.3	End Effects.....	231
2.5.5.4	Current Leakage to Channel Side Walls.....	236
2.5.5.5	Transverse Pressure Gradient.....	242
2.5.6	Level of Description.....	246
2.5.7	Experimental Data Processing Using the Quasi- One-Dimensional Approximation.....	252
2.5.8	Calculation of a Flow in a Channel of a Commercial- Scale MHD Generator.....	260

Chapter 3 Characteristics of a Nonideal MHD Generator

3.1	Introduction.....	271
3.2	The Influence of Various Factors of the Characteristics of a Real MHD Generator.....	273
3.2.1	Nonideal Behavior of an MHD Channel.....	274
3.2.2	Certain Characteristics of the U-02 and “Start” Experimental Facilities.....	275
3.2.3	Transverse Plasma Conductivity Nonuniformity.....	281
3.2.4	Nonideal Behavior of Insulation.....	284
3.2.5	Joint Influence of Plasma Conductivity Nonuniformity and Nonideal Behavior of Insulation.....	289
3.2.6	No-Load Voltage in an MHD Generator.....	291
3.2.7	Direct Experimental Verification of Current Circulation in an Nonuniform Flow Caused by the Hall Effect.....	292
3.2.8	Other Factors.....	295
3.2.8.1	Nonideal Behavior of Electrode Segmentation.....	296
3.2.8.2	Nonuniformity in Flow Rate and Transverse Plasma Conductivity.....	298
3.2.8.3	Near-Electrode Potential Drop.....	299

3.2.9	Protrusion of Electrodes into the Flow. Transverse Current Nonuniformity.....	301
3.2.10	Simplest Model that Takes into Account the Current Flow to the Insulation Walls.....	306
3.3	Simplified Model and Methods of Calculating Local Characteristics of an MHD Generator taking into Account Three-Dimensional Current Distribution in Channels.....	308
3.3.1	Construction of the Computational Model.....	309
3.3.2	Special Cases.....	317
3.3.2.1	Low Near-Electrode Potential Drop.....	317
3.3.2.2	The “ $J_z = 0$ ” Model.....	318
3.3.2.3	The “ $E_z = 0$ ” Model.....	319
3.3.2.4	Infinite Surface Conductivity of Horizontal Walls of an MHD Channel ($\sigma_y \rightarrow \infty$).....	320
3.3.3	Comparison of the Results with the Experimental Data and an Exact Solution of the Problem.....	320
3.4	Nonideal Behavior of Large-Scale MHD Channels.....	325
3.4.1	The Influence of Various Factors on the Characteristics of a Commercial-Scale MHD Generator.....	325
3.4.2	Permissible Level of Surface Conductivity of MHD Channel Walls.....	327
3.4.3	Nonideal Insulation and Efficiency of an MHD Generator.....	329
3.5	Certain Aspects of Optimizing Parameters of an MHD Generator.....	333
3.5.1	Optimal Flow Rate.....	333
3.5.2	Certain Aspects of Optimum Wall Temperature of an MHD Channel.....	340
3.5.3	Optimal Ratio of the Sides of an MHD Channel Cross Section.....	343
3.6	Conclusions.....	352
	Appendix.....	355

Chapter 4 Plasma Diagnostics in MHD Generators

4.1	Introduction.....	365
4.2	Spectroscopic Diagnostics of Spatially Nonuniform Gas (Theory).....	367
4.2.1	On the Application of Kirchhoff’s Law for a Description of Emission of Alkali Atoms in Combustion Products.....	371

4.2.2	Emission Source Function of Resonance Lines of Alkali Atoms in MHD Generators.....	375
4.2.3	Determination of the Concentration of Atoms with the Aid of Self-Reversed Spectral Lines.....	379
4.2.4	Measurement of the Temperature of a Spatially Nonuniform Gas.....	382
4.2.5	Temperature Fluctuations in the Gas.....	387
4.3	Spectroscopic Gas Temperature and Atom Concentration Measurements in Equilibrium MHD Generators.....	396
4.3.1	Devices for Measuring Temperature by the Generalized Self-Reversal Method.....	396
4.3.2	Emission Intensity Fluctuations.....	406
4.3.3	Measurement of Concentration of Alkali Metal Atoms.....	408
4.4	Feasibility of Diagnostics of Combustion Products with Alkali Seed by Means of an HCN Laser.....	410
4.4.1	Experimental System and Measuring Methods.....	413
4.4.2	Experimental Verification of the Feasibility of Using an HCN Laser in Combustion Products with Alkali Seed.....	420
4.5	Local Measurement of the Electron Temperature with Cold Electric Probes.....	424
4.5.1	The Influence of the Temperature of the Probe on the Temperature Being Measured in the Case of High Electronic Thermal Conductivity.....	428
4.5.2	The Influence of the Temperature of the Probe on the Temperature Being Measured When the Electron Temperature is Equal to That of Heavy Particles.....	441
4.5.3	Experimental Investigation of the Influence of the Temperature of the Probe on the Temperature Measurements.....	444
4.5.4	Experimental Investigation of the Relative Distribution of the Gas Temperature Near the Surface of the Probe.....	452

Chapter 5 Phenomena in the Near-Electrode Region of a Constricted Discharge

5.1	Introduction.....	465
5.2	Present State of the Problem.....	466
5.3	Near-Cathode Region of Arc Discharge in Electrode Materials Vapors.....	475
5.3.1	Analysis of the Theory.....	475
5.3.2	Model and the System of Equations.....	484

5.3.3	Investigation of the Solution of the System of Equations.....	498
5.3.3.1	Solid Cathode.....	498
5.3.3.2	Film Cathode.....	511
5.3.3.3	Method of Autographs.....	527
5.4	Constricted Discharge on Metal Electrodes in an MHD Generator Channel.....	533
5.4.1	Theoretical Analysis.....	534
5.4.2	Model and Solution of the System of Equations.....	539
5.4.3	Erosion Processes on the Cathode.....	562
	List of Series Volumes.....	583
