CONTENTS

Chapter 1. Basic Equations	
 The equations of electrodynamics	1
magnetic forces	9
3. Ohm's law	18
4. The equations of magnetohydrodynamics	31
5. The simplest integrals of magnetohydrodynamic equations	37
Chapter 2. Motion of an Incompressible Liquid	
1. The motion of a viscous electrically conducting fluid with linear cur-	
rent flow	42
2. Steady-state motion along a magnetic field	54
3. Wave motion of an ideal fluid	5 8
Chapter 3. Simple Wave Structures and Small Disturbances in an Ideal Gas	
1. Weak discontinuities	64
2. Simple waves	70
3. Small disturbances	79
Chapter 4. Surfaces of Discontinuity in an Ideal Gas	
1. Classification of surfaces of strong discontinuity	84
2. Evolution of magnetohydrodynamic shock waves	88
3. Solution of the shock wave conditions in a perfect gas	95
Chapter 5. Nonstationary Motions of an Ideal Gas	
1. Problem of the flat piston	108
2. Disintegration of an arbitrary discontinuity	113
3. Propagation of weak shock waves and weak discontinuities in space	121
4. One-dimensional symmetric motion: homogeneous deformations about	
an axis of symmetry	126
Chapter 6. Stationary Motion of an Ideal Gas	
1. Characteristics of the magnetohydrodynamic equations for stationary	
flow	131
2. Linear problems	134
3. Stationary simple waves	146

VIII CONTENTS

Chapter 7. Stationary Motion of a Nonideal Gas	
 Flow in current tubes Structure of magnetohydrodynamic shock waves 	
Chapter 8. The Flow of a Conducting Fluid Past Magnetized Bodies	
1. The flow of an ideal fluid past magnetized bodies	180
2. Fluid of finite electrical conductivity flowing past a magnetized body.	184
APPENDIX I. The Structure of Shock Waves	194
APPENDIX II. The Structure of a Magnetohydrodynamic Shock Wave in a	
Gas with Anisotropic Conductivity	206
