CONTENTS

Preface

Chapter 1. Einstein Equations and Leray Theorem		
1.	Einstein Equations	1
2.	Elementary Analysis of the Cauchy Problem	2
3.	Harmonic Coordinates	4
4.	Einstein Equations in Harmonic Coordinates	7
5.	Strictly Hyperbolic Matrices	10
6.	Leray Systems	11
7.	The Exterior Case	14
8.	The Case of the Pure Matter	17
Chapter 2	2. Relativistic Hydrodynamics	23
9.	Thermodynamical Perfect Fliud	23
10.	The System of the Stream Lines	25
11.	Equation of Continuity and Conservation of the Matter	29
12.	Relativistic Helmholtz Equations	30
13.	The System of Relativistic Hydrodynamics	
	and its Characteristics	31
14.	Laplacian of the Current C	37
15.	Existence and Uniqueness Theorem	42
16.	Another Method	45
17.	Incompressible Thermodynamical Fluid	51
18.	Irrotational Motion	53
Chapter 3. Charged Fluid with a Null Conductivity		
19.	The Main Differential System for the Fluid	55
20.	The Equation of Continuity and the Differential	
	System of the Stream Lines	57

vii

viii		CONTR	ents
	21.	Relativistic Helmholtz Equations	60
	22.	Relations between Hydrodynamic Current and	
		Vorticity Tensor	62
	23.	The Operator $\Delta^{(h)}$	64
	24.	The Equations in Harmonic Coordinates with the	
		Lorentz Condition	65
	25.	Differential System of the Stream Lines Deduced for	
		the System (II)	68
	26.	Characteristics of the System-Analytic Cauchy Problems	70
	27.	Helmholtz Equations Deduced from the System (II)	73
	28.	Relations between Hydrodynamic Current and Vorticity	
		Tensor Deduced from the System (II)	74
	29.	Existence and Uniqueness Theorem	78
Cha	pter 4	4. Relativistic Magnetohydrodynamics	83
	30.	Electromagnetic Field with Induction	83
	31.	Maxwell Equations and Energy Tensor of Minkowski	87
	32.	The Case of the Magnetohydrodynamics	93
	33.	The Main Equations of Relativistic Magnetohydrodynamics	s 94
	34.	The Equation of Continuity and the Differential System	
		of the Stream Lines	96
	35.	Characteristics of the Relativistic Magnetohydrodynamics	100
	36.	Waves and Velocities of Propagation	107
	37.	Some Formulas with a Physical Interest	114
	38.	The Case of an Incompressible Fluid	116
	39.	Equations of the Helmholtz Type	118
	40.	Representation of the Wave Cones in R ³	122
	41.	Auxiliary Equations, Consequences of the Main System	127
	42.	The Equations Corresponding to f and $ \mathbf{h} ^2$	132
	43.	The Equations Corresponding to the u ^a	134
	44.	A Lemma	136
	45.	System (III) of Magnetohydrodynamics	143
Cha	pter 5	5. Shock Waves in Magnetohydrodynamics	150
-	46.	The Main System	150
	47.	Shock Equations	151
	48.	Tangential Shocks	153
	49.	Invariants of the Nontangential Shocks	154
	50.	Analysis of a Nontangential Shock	158
	51.	Analysis of the Alfven Shocks	162
	52.	The Vector \mathbf{U}^{β} for a Nontangential Shock	166
	53.	Relativistic Hugoniot Equation	169
	54.	Classical Approximation of the Relativistic	
		Magnetohydrodynamics	172

CONTENTS		ix
55.	Thermodynamics of the Shocks	176
56.	Shock Wave and Alfven Waves	180
57.	Compatibility of a Shock Wave with the Alfven Waves	182
58.	The Compressibility Conditions	186
Conclusion		191
References		193
Index		195
