Table of Contents

Preface.

XI

Chapter I - Tensor Distributions.

1.1. –	Tensor distributions over a pseudo-Riemannian	
	manifold	1
1.2. –	Covariant derivative of a tensor distribution	4
1.3. –	The distributions Y^+ , Y^- and $\overline{\delta}$ corresponding to a	
	hypersurface	6
1.4. –	Tensor discontinuities relative to a hypersurface	10
1.5. –	Generalization of ∇T^{D}	12
1.6. –	The case of continuous tensors	14

Chapter II - Maxwell's equations and electromagnetic waves over a curved space-time.

11.1. –	Space-time	18
11.2. –	Singular 2-form	19
11.3. –	Maxwell's equations and the formal Cauchy problem	21
11.4. –	Maxwell's equations and potential-vector	25
11.5. –	Ordinary electromagnetic waves	28

Chapter III - Einstein's equations and the Leray theorem.

111.1. –	The system of Einstein equations	33
111.2. –	Harmonic quantities	38
111.3. –	Einstein's equations and harmonic charts	41
111.4. –	Strictly hyperbolic matrices	44
111.5. –	Leray systems	47
111.6. –	The Einstein equations in the exterior case	49
111.7. –	The case cf pure matter	53

Chapter IV - Gravitational and electromagnetic shock waves.

IV.1. –	Gravitational shock waves	60
14.2	Singular double 2-form	64
IV.3. –	Einstein's equations in the weak sense, Conditions of	
	shock	68
17.4. –	A geometric consequence	76
IV.5. -	Propagation of discontinuities	77
14.6. –	Consequences	81
14.7. –	Electromagnetic shock waves	84
17.8	Propagation of discontinuities for an electromagnetic	
	shock wave	87
17.9. –	Gravitational shock wave in an electromagnetic field	91
IV.10. –	Gravitational and electromagnetic shock waves (with	
	Maxwell tensor)	94

Chapter V - Relativistic hydrodynamics.

V.1	Equations of relativistic hydrodynamics	98
V.2	Characteristic hypersurfaces of the hydrodynamic	
	system	102
V.3	A Leray system and the Cauchy problem	107
V.4	Sonic waves	114
V.5	Main property of the rays in hydrodynamics	116
V.6. –	Thermodynamic hypothesis	121

Chapter VI - The equations of magnetohydrodynamics.

VI.1	Electromagnetic field with induction	124
VI.2	Maxwell equations and energy tensor of Minkowski	128
VI.3. –	The case of the magnetohydrodynamics	129
VI.4	The main equations of relativistic	
	magnetohydrodynamics	131
VI.5	The equation of continuity and the system of the	
	lines of flow	133
VI.6. –	Magnetosonic waves and Alfven waves	135
VI.7	Magnetosonic speeds and Alfven speeds	140
VI.8	Representations of the wave cones in \mathbb{R}^3	144
VI.9	Main property of the rays associated to the	
	magnetosonic waves	150
VI.10	Property of the rays associated to the Alfven waves	156

Chapter VII - Magnetohydrodynamic shock waves.

VII.1	The main system of the shock waves	159
VII.2. –	Analysis of the shock equations	162
VII.3. –	New form of the shock equations for $\ell^{\alpha} \ell_{\alpha} \neq 0$	168
VII.4. –	Alfven shocks	170

Chapter VIII - Hugoniot's function and applications.

VIII.1. –	Relativistic Hugoniot's relation for $\ell^{\alpha} \ell_{\alpha} \neq 0$	174
VIII.2. –	Differential of Hugoniot's function	177
VIII.3. –	Differential of S along a straight line $(\ell^{\alpha}\ell_{\alpha} \neq 0)$	179
VIII.4. –	The case where $\ell^{\alpha}\ell_{\alpha} = 0$ is impossible	182
VIII.5. –	Orientation of shock wave fronts in the time	185
VIII.6. –	Thermodynamic inequalities for the shocks	186
VIII.7. –	Isentropic curves and Hugoniot's curve	191
VIII.8. –	Speeds of shock waves	195
VIII.9. –	Isentropic curves and weak shocks	197
VIII.10	The case $\tau'_s > 0$	199
VIII.11	The case $\tau_s' < 0$	202
VIII.12	Conclusions	210

Annex I - Shock waves and alfven waves.

Al.1	Singular shocks	211
Al.2. –	Compatibility between shock waves and Alfven	
	wayes	220

TABLE OF CONTENTS

Annex II - Magnetosonic rays.

AII.1	Directions of the rays	226
AII.2	Action of δ on the direction of the ray	229

Annex III - Classical approximations of the relativistic shock equations.

Bibliography		235
AIII.2	Classical approximation	232
AIII.1	The frame connected with the shock	232

Note - Approach to a quantum theory of fields for a curved space-time.

I -	Tensor	propagators	237
-----	--------	-------------	-----

NI.1. –	Orientations over a space-time	237
NI.2. –	Global hyperbolicity	239
NI.3. –	Bitensors and Dirac bitensors	240
NI.4. –	Linear differential-tensor operators associated with $\ {\bf g}$	242
NI.5	Elementary Kernels and propagators	244
NI.6. –	Tensor propagators relative to the space-time of	
	Minkowski	249
NI.7. –	Propagators relative to the operator $(\Delta + y)$	252

II - Applications to quantization problems over a curved space-time.

NII.1. –	Commutator for vector Meson	256	
NII.2. –	Commutator for a free electromagnetic field	258	
NII.3. –	Commutator for a varying gravitational field with mass	259	
NII.4. –	Commutator for a varying gravitational field without		
	mass term	265	
NII.5. –	Creation. Annihilation operators	267	
NII.6. –	Dirac field	272
