

# CONTENTS

*Preface* vii  
*Symbols* xiii

<b>1. Introduction.....</b>	<b>1</b>
1.1 Principal Characteristics of an MHD Generator and Areas of Application	1
1.2 A Short History of MHD Energy Conversion	4
1.3 Basic Concepts	9
1.4 Magnetic Reynolds Numbers	11
<b>2. Ionization and Conductivity.....</b>	<b>17</b>
2.1 Charge Neutrality	18
2.2 Thermal Ionization	19
2.3 Current	22
2.4 Conductivity: An Elementary Derivation	23
2.5 Scalar Conductivity Including Electron-Ion Collisions	24
2.6 Generalized Ohm's Law	27
2.7 Ion Slip	31
2.8 Power Relations in the Presence of the Hall Effect and Ion Slip	34
<b>3. Fluid Mechanics.....</b>	<b>37</b>
3.1 Basic Equations	38
3.2 Interaction Length	40
3.2.1 Optimum Mach Number	41

3.3	Overall Generator Efficiency	43
3.4	Polytropic Efficiency	43
3.5	Relation between Overall and Polytropic Efficiency	44
3.6	Local Static or Electrical Efficiency	45
3.7	Relation between Electrical and Polytropic Efficiency	46
3.8	Efficiency Including Wall Heat Transfer and Friction	47
3.9	Boundary Layers	48
3.10	Special Solutions of the Equations of Motion	51
3.10.1	Constant-velocity Duct	51
3.10.2	Constant-Mach Number Duct	52
3.10.3	Constant-temperature Duct	53
3.10.4	Constant-pressure Duct	54
3.10.5	An Approximation for Variable Conductivity	55
3.11	A Method for Numerical Hand Calculation	56
<b>4.</b>	<b>Hall and Ion Slip Effects—Engineering Consequences</b>	<b>59</b>
4.1	Segmenting—Faraday Generator	59
4.2	Hall Generator	61
4.3	Diagonal Connection	64
4.4	Finite Segmenting	66
4.4.1	Wedge Electrodes	69
4.5	Electrode Width Less than Channel Width	71
4.6	Nonuniform Gases	74
4.6.1	Fluctuating and Isotropic Nonuniformity	78
4.7	Waves	82
<b>5.</b>	<b>Nonequilibrium Ionization</b>	<b>91</b>
5.1	Two-temperature Model	92
5.2	Energy-loss Mechanisms	93
5.3	Energy-input Mechanisms	94
5.3.1	Joule Dissipation	96
5.4	Recombination	99
5.4.1	Ionization	103
5.5	Stability of Nonequilibrium Ionization	103
5.5.1	Spoke Instability	104
5.5.2	Small Perturbation Analysis of Electrothermal Disturbances	106
5.5.3	Discussion	110
<b>6.</b>	<b>Magnet Design</b>	<b>115</b>
6.1	Introduction	115
6.2	Crescent Coil Cross Section	117
6.3	Rectangular Coil Cross Section	120
6.4	Superconducting Coils	123
6.5	Structure Weight	127
6.6	Specific Mass of a Generator	127

**7. Miscellaneous Design Considerations..... 133**

- 7.1 Geometric Variations 133
- 7.2 Constant Loading in Hall and Diagonal Generators 135
- 7.3 Magnitude of the Hall Voltage 137
- 7.4 Heat Transfer, Friction, and Duct  $L/D$  138
- 7.5 End Effects 139
- 7.6 Channels with Circular Cross Section 141
- 7.7 Diffuser Losses 142
- 7.8 Choice of Working Gases—Closed Cycles 143
  - 7.8.1 Seeding 144
- 7.9 Scaling Laws for a Straight Channel 145
  - 7.9.1 Temperature Dependence 148
- 7.10 Scaling Laws for a Disk Channel 149
- 7.11 Generation of Alternating Current 151
- 7.12 Insulating Wall Construction 152
  - 7.12.1 Composite Walls 157
- 7.13 Electrodes 158

**8. Applications..... 163**

- 8.1 Cycles 164
- 8.2 Public Utility Power: Chemical Fuels 172
- 8.3 Rocket Generators: High-power Short-duration Electric Power Sources 175
- 8.4 Public Utility Power: Nuclear Fuels 178
- 8.5 Aerospace Applications 180
  - 8.5.1 Cavity Reactors 180
  - 8.5.2 Radiating Power Plants 185
  - 8.5.3 Propellant-cooled Propulsion Systems 189

**Appendix A. Transport Properties in a Multicomponent Gas..... 197**

**Appendix B. Calculated Curves of Conductivity and Hall Parameter.... 199**

**Appendix C. Magnetic Field Strength in Some Miscellaneous Coil Geometries 223**

**Appendix D. Constants, Conversion Factors, and Numeric Formulas for Thermal Velocities, Viscosity, and Reynolds Number..... 225**

**Appendix E. Graph for the Calculation of Generator Performance..... 229**
