## Preface 7

1. **Vortices in Plasma and Hydrodynamics** *by A. B. Mikhailovskii* 8
  - 1.1. Introduction 8
  - 1.2. Nonlinear Equations for Rossby Waves 12
  - 1.3. The Simplest Nonlinear Equations for Drift Waves 14
  - 1.4. Vector Vortical Structures 16
  - 1.5. Scalar Vortical Structures 18
  - 1.6. Further Development of Concepts Concerning Electrostatic Vortices in Plasma 19
  - 1.7. Electromagnetic Vortices 22
  - 1.8. Conclusion 24
2. **Oscillations and Bifurcations in Reversible Systems** *by V. I. Arnold and M. B. Sevryuk* 31
  - 2.1. Introduction 31
  - 2.2. Reversible Mappings 32
  - 2.3. Reversible Flows 33
  - 2.4. Integrable Reversible Mappings and Vector Fields 34
  - 2.5. Kolmogorov's Tori 35
  - 2.6. Weak Reversibility 37
  - 2.7. The Local Theory 37
  - 2.8. Weak Reversibility in a Local Situation 42
  - 2.9. Periodic Solutions 42
  - 2.10. Kolmogorov's Tori for Additional "Even" Coordinates 44
  - 2.11. The Local Theory for Additional "Even" Coordinates 45
  - 2.12. Application to Reversible Equations 48
  - 2.13. Non-Autonomous Reversible Systems 49
  - 2.14. The Lyapunov-Devaney Theorem 51
  - 2.15. The Resonance 1:1 52
  - 2.16. Further Resonances 1:N ( $N \geq 2$ ) 54
3. **Regular and Chaotic Dynamics of Particles in a Magnetic Field** *by R. Z. Sagdeev and G. M. Zaslavskii* 65
  - 3.1. Introduction 65
  - 3.2. Equations of Motion 67
  - 3.3. The Resonances of Longitudinal Motion 69
  - 3.4. The Overlapping of the Resonances of Longitudinal Motion 72
  - 3.5. A Kinetic Description 75
  - 3.6. Equations of Transverse Motion 78
  - 3.7. The Resonances of High-Energy Particles 83
  - 3.8. Resonances in a Weak Magnetic Field 84
  - 3.9. Generalization to a Wave Packet 85

3.10.	A Kinetic Description of Transverse Motion	86
3.11.	Quasi-Resonance Particles	88
	References	92
4.	<b>The Renormalization Group Method and Kolmogorov-Arnold Moser Theory</b> by <i>K. M. Khanin and Ya. G. Sinai</i>	93
4.1.	Introduction	93
4.2.	Rectification of the Nonlinear Rotation of a Circle	97
4.3.	Construction of Invariant KAM Curves by the Renormalization Group Method	110
	References	118
5.	<b>Nonlinear Problems of Turbulent Dynamo</b> by <i>Ya. B. Zel'dovich and A. A. Ruzmaikin</i>	119
5.1.	Introduction	119
5.2.	Nonlinear Mean Field Dynamo	121
5.3.	MHD Turbulence	130
	References	135
6.	<b>Problems of the Theory of Strong Turbulence and Topological Solitons</b> by <i>R. Z. Sagdeev, S. S. Moiseev, A. V. Tur, and V. V. Yanovskii</i>	137
6.1.	Introduction	137
6.2.	The Scaling Group and Functional Method	140
6.3.	"Null-Modes" and the Self-Similar Spectrum	152
6.4.	Invariant Properties of Hydrodynamic Models and Topological Solitons	163
	References	180
7.	<b>Self-Oscillations and Auto-Waves in Chemical Systems</b> by <i>A. M. Zhabotinskii</i>	183
7.1.	Introduction	183
7.2.	Experimental Studies	184
7.3.	Theoretical Studies	195
7.4.	Conclusion	207
	References	208
8.	<b>Auto-Waves in Biologically Active Media</b> by <i>V. I. Krinskii</i>	210
8.1.	Introduction	210
8.2.	Mathematical Description	211
8.3.	Local Sources of Auto-Waves	213
8.4.	Cardiac Disorders	215
8.5.	Mathematical Simulation of Auto-Wave Sources	216
8.6.	A Chemically Active Medium	216
8.7.	New Auto-Wave Modes	217
8.8.	Auto-Wave Sources in Three-Dimensional Active Media	217
8.9.	The Effect of Medium Parameters on Auto-Wave Sources	218
8.10.	An Anomalous Reverberator	219
8.11.	Theoretical Studies of Reverberators	220
8.12.	Conclusion	221
	References	222
