ACKNOWLEDGMENT	xi
TABLE OF SYMBOLS	xvii
CHAPTER	
I. INTRODUCTION TO THE KINETIC THEORY OF GASES	1
Nature of a Gas—Molecular Collisions—General Gas Laws—Boltzmann's Relation—Molecular Velocity Distribution—Equipartition of Energy—Number of Particles Crossing Unit Area in 1 Sec.—Mean Free Paths of Molecules and Electrons—Distribution of Free Paths—Diffusion of Gases.	
II. MOTION OF IONS AND ELECTRONS	29
Mean Free Paths of Ions and Electrons—Interception of Positive Ions—Mobility of Gaseous Ions—Mobility of Electrons—Diffusion of Ions—Ionic Motion in Electric Field and Concentration Gradient—Circuit Current Produced by Charge Motion.	
III. ATOMIC STRUCTURE AND RADIATION	59
Bohr Atom—Structure of More Complex Atoms—Ionization—Energy States—Energy-level Diagrams—Metastable States.	
IV. IONIZATION AND DEIONIZATION	78
Ionization—Ionization by Electron Collision—Positive-ion Collision Ionization—Ionization by Radiation—Thermal Ionization—Cumulative Ionization—Deionization—Recombination and Attachment—Recombination Coefficient—Deionization by Diffusion.	
V. EMISSION OF ELECTRONS AND IONS BY SOLIDS	106
Introduction—Thermionic Emission—Electron Emission by Electron Bombardment—Electron Emission by Positive-ion Bombardment—Electron Emission by Metastable Atoms—Field Emission—Photoelectric Emission—Emission of Positive Ions.	
VI. SPACE CHARGE AND PLASMA	123
Space-charge Effects—High-vacuum Space Charge—High-pressure Space Charge—Plasma—Plasma Oscillations—Probe—Theory.	

CHAPTER	CONTENTS	PAGE
VII.	FIELD-INTENSIFIED IONIZATION AND BREAKDOWN OF GASES.	143
	Townsend Discharges—Field-intensified Ionization by Electrons—Electron Ionization Coefficient—Optimum Pressure for Field-intensified Ionization by Electrons—Cumulative Ionization—Law of Similitude—Spark Breakdown—The Sparking Potential—Space-charge Distortion—Spark-gap Testing—Spark-breakdown Field Strength—Ideal Plane Electrodes—Effects of Impurities on Spark Breakdown—High-frequency Sparks—Surge Breakdown—Mechanism of Spark Breakdown—Lightning—Lichtenberg Figures.	
VIII.	GLOW DISCHARGES	205
	Self-sustained Discharges—Conditions for Existence and Stability of Discharges—Similarity Relations—Low-pressure Glow Discharge—Cathode Phenomena and Negative Glow—Analysis of the Cathode-drop Region—Abnormal Glow—Cathode Sputtering—Faraday Dark Space—Positive Column—Analysis of the Positive Column—Anode Phenomena—Dynamic Characteristics of the Glow Discharge—High-pressure Glow—Corona—Critical Corona Gradient—Direct-current Corona Current—Point Discharges—Corona Space Charge—Corona Loss—Alternating-current Corona Analysis.	
IX.	ELECTRIC ARC	290
	General Properties of Arcs—Characteristic Arc Relations—Cathode Phenomena—Glow-arc Transition—Low-pressure Arc Column—Analysis of the Low-pressure Arc Column—Properties of the High-pressure-arc Positive Column—Analysis of the High-pressure Arc Column—Anode Phenomena—Oscillations in Direct-current Arcs—Alternating-current Arcs—Reignition of the Alternating-current Arcs—Welding Arcs.	
X.	CIRCUIT INTERRUPTION	371
	Interruption of Direct Current—Extinction of Alternating-current Arcs—Circuit Interrupters—Alternating-current Switch Energy—Fuses—Expulsion Protector Tubes—Lightning Arresters.	
XI.	GAS-DISCHARGE RECTIFIERS	417
	General Principles—Mercury-pool Rectifiers—Cathode-spot Ignition and Maintenance—Backfires—Grids—Steel-tank Rectifiers—Hot-cathode Rectifiers—Grid-controlled Rectifier, or Thyatron—Magnetically Controlled Arc Tubes—Glow-discharge Rectifiers—High-pressure Arc Rectifier.	
XII.	RECTIFIER CIRCUIT THEORY	472
	Single-phase Rectification—Full-wave Rectification—Polyphase Rectification—Voltage and Current Harmonics—Utility Factor	

CHAPTER	CONTENTS	PAGE
	—Commutation—Grid Control of Polyphase Rectifiers—Phase Equalization—Inversion—Rectifier Power Relations.	
XIII.	GAS-DISCHARGE LIGHT SOURCES.	512
	Illumination—Glow-discharge Tubes—Carbon Arc—Low-pressure Vapor Arc Lamps—High-pressure Vapor Arc Lamps—Fluorescent Lamps.	
XIV.	CATHODE-RAY OSCILLOGRAPHS	547
	Introduction—Beam Sources—Electron Dynamics—Electrostatic Deflection of Electrons—Magnetic Deflection of Electrons—Focusing of Cathode Rays—Magnetic Focusing—Electrostatic Focusing—Gas Focusing—Cathode-ray Recording.	
	PROBLEMS	569
	APPENDIX A—FUNDAMENTAL CONSTANTS	577
	APPENDIX B—MATHEMATICAL TABLE	578
	APPENDIX C—ATOMIC PROPERTIES OF THE ELEMENTS.	579
	APPENDIX D—ATOMIC ENERGY STATES	584
	APPENDIX E—STANDARD SPHERE-GAP SPARKOVER VOLTAGES	586
	APPENDIX F—AIR-DENSITY CORRECTION FACTORS FOR SPHERE GAPS	588
	APPENDIX G—SUGGESTED EXPERIMENTS.	589
	GENERAL REFERENCES	593
	INDEX.	595
