PART ONE: GENERAL PRINCIPLES, CHARACTERISTICS AND CONSTRUCTION

1	PRINCIPLES OF VALVE OPERATION	3
	THE VALVE AS AN ELECTRONIC SWITCH	3
	The Function of the Valve; Electronics; The Discharge; Cold-cathode and Hot-cathode Valves.	
	CURRENT AS A FLOW OF ELECTRONS AND IONS	4
	Charge Transfer; Current in a Metallic Conductor; Electron Emission, or Escape, from the Cathode; Current Conduction in Space; Types of Gas Discharge; Comparison of Conduction in Vacuum, Gas Discharges and Metal; Control; Anode and Cathode: Direction of Current.	
	MOVEMENTS OF THE PARTICLES	13
	Random and Drift Motions; The Gas Molecules; The Charged Particles; Diffusion and Recombination; Ionization and Deionization; Ion Bombardment.	
2	GENERAL CHARACTERISTICS OF ARC-DISCHARGE VALVES	17
	CLASSIFICATION	17
	THE HOT-CATHODE RECTIFIER	17
	Construction; Arc-back (or Backfire); Gas-filling.	
	THE HOT-CATHODE THYRATRON	23
	Construction; Control; A.C. Circuits; Phase Control; Grid-Voltage Swing.	
	THE IGNITRON	31
	Construction and Operation; Operation of the Ignitor.	
	THE EXCITRON	34
	ALKALI-VAPOUR RECTIFIERS AND THYRATRONS	36

	<i>Page</i>
3 DESIGN AND CONSTRUCTION	38
INTRODUCTION	38
THE HOT-CATHODE VALVE	39
The Envelope; The Oxide-Coated Cathode; The Directly-Heated Cathode; The Indirectly-Heated Cathode; Cathode Heater Supply; The Dispenser Cathode; The Anode; The Grid; The Shield-Grid; Ionization and Deionization—Design Considerations; Loss of Control; Leads and Connections; Exhaust; Gas Filling; Temperature Dependence; Cathode-heating Time; Arc Drop; Pressure Range; Voltage-ratings; Ionization and Deionization; Alkali Vapour Fillings.	
THE IGNITRON	77
General Construction; The Envelope and Water Jacket; The Anode; Anode Insulation; The Cathode; The Ignitor; Baffles; Auxiliary Anodes; Grids; Exhaust.	
THE EXCITRON	93
 PART TWO: PHYSICAL PROCESSES IN THE DISCHARGE	
4 SECTION 1: ELECTRON EMISSION	101
GENERAL THEORY AND CLASSIFICATION	101
Electrons in Metals; Work Function; Emission; Emission Agencies.	
PHOTO-ELECTRIC EMISSION	105
The Photon; Energy Transfer; Photo-Emission in Photo-electric Cells; Photo-emission in the Arc Discharge.	
THERMIONIC EMISSION	108
Thermal Motion of Electrons in Metal; Richardson-Dushman Equation; Practical Cathodes.	
EMISSION PROCESSES IN ARC-DISCHARGE DEVICES	110
Hot Cathodes (Oxide-coated); Cathode Spot on a Mercury Pool; Electron Emission at other Electrodes; Emission at the Ignitron Ignitor.	
4 SECTION 2: EXCITATION AND IONIZATION PROCESSES	116
PROCESSES INVOLVED	116
Electron Orbits; Electron Energies; Transitions; Metastable Atoms; Sources of Excitation and Ionization Energy; Excitation and Ionization by Collision.	
COLLISIONS BETWEEN PARTICLES	122
Probability of Impact Ionization; Cumulative Ionization; Ionization in a Magnetic Field; Motion of an Electron in a Magnetic Field.	

CONTENTS		XV
		<i>Page</i>
4	SECTION 3: ELECTRICAL DISCHARGES—FORMS AND CHARACTERISTICS	127
	CLASSIFICATION	127
	POTENTIAL DISTRIBUTION, FIELD AND SPACE CHARGE	127
	THE VACUUM DISCHARGE	129
	Examples of the Vacuum Discharge; Control of Current Flow.	
	THE GAS DISCHARGE: STAGES IN DEVELOPMENT	133
	Characteristics of the Townsend Discharge; The Transition from Townsend to Glow Discharge; The Transition from Glow to Arc Discharge.	
	CONDITIONS FOR DEVELOPMENT OF A SELF- SUSTAINING DISCHARGE	136
	Paschen's Law.	
	THE GLOW DISCHARGE	140
	Characteristics; Applications of the Glow Discharge.	
	THE ARC DISCHARGE	147
	Comparison with Glow Discharge; The Hot-Cathode Arc; The Arc Discharge in Relation to the External Circuit; Practical Examples of the Arc Discharge.	
4	SECTION 4: SPACE-CHARGE SHEATHS AND PROBE ANALYSIS	150
	SPACE-CHARGE CURRENT	150
	POSITIVE-ION SPACE-CHARGE SHEATHS	152
	Occurrence; Dimensions; Ion Sheath at the Cathode; Ion Sheath at the Grid; Ion Sheath at the Anode; The Use of Probes in the Study of Gas Discharges.	
	NOTE ON ELECTRON VELOCITY DISTRIBUTION	160
5	PHENOMENA ASSOCIATED WITH THE ARC DIS- CHARGE	163
	DISTRIBUTION OF THE PARTICLES	163
	Particles Involved; Neutral Gas Molecules; The Charged Particles; Electron and Ion Temperatures; Ambipolar Diffusion; Boundary Conditions; Arc Starvation; Thermal Noise; Noise in the Gas Discharges.	
	VOLTAGE BREAKDOWN	175
	Initiation of Discharge; Impulse Ratio; Paschen's Law and the Long-path Effect.	

	<i>Page</i>
CATHODE SPOTS	177
The Arc Cathode-Spot on Mercury—Characteristics; Current Density; Instability of the Cathode Spot; Mechanical Effects at a Mercury Cathode; Anchoring of Cathode Spot on Mercury Pool; Motion of the Arc Spot in a Magnetic Field; Formation of Unwanted Cathode Spots.	
RECOMBINATION OF THE CHARGED PARTICLES	185
Recombination on Solid Surfaces; Accelerated Deionization at Anodes and Grids.	
ARC-BACK	187
Statistical Probability; Mechanism; Arc-back by Voltage Break-down; Arc-back at Commutation.	
SPUTTER	191
Transfer of Energy of Ions; Sputter in Glow Discharges; Sputter in Arc Discharges.	
GAS CLEAN-UP	195
Forms of Gas Clean-up; Chemical Clean-up; Adsorption; Absorption; Glass and Ceramic Surfaces; Replenishment; Temporary Clean-up.	
6 CHARACTERISTICS OF THE ARC DISCHARGE	205
FUNCTIONS OF GAS PRESSURE AND DENSITY	205
ARC VOLTAGE DROP	205
Variation with Arc Current; Variation with Operating Conditions.	
CONTROL	213
Striking Voltage; Grid-Control Characteristics; Loss of Grid Control; Grid Current (before Arc Conduction); Grid Current (during Arc Conduction).	
IONIZATION TIME	221
Two Stages; Delay Period; Current Build-up Period; Methods of Reducing Ionization Time.	
DEIONIZATION TIME	225
Diffusion of Charged Particles; Deionization Time as a Characteristic; Effective Deionization Time; Measurement of Deionization Time.	
PART THREE: THE VALVES IN USE	
7 THE ARC DISCHARGE VALVE AS A CIRCUIT COMPONENT	233
INTRODUCTION	233
Applications; Factors Important to the Valve; Single-phase and Polyphase Rectifier Circuits; General Characteristics; Parallel Operation of Arc-Discharge Valves; Commutation.	

CONTENTS

xvii

	<i>Page</i>
HALF-WAVE RECTIFICATION	239
Non-inductive Load; Battery Charging; Capacitor Load; Controlled Rectification; Inductive Load ($R + L$); Switching Transients; Shape of Current Pulse; Purely Inductive Load (L).	
BI-PHASE RECTIFICATION	249
The Circuit; Non-inductive Load; Inductive Load ($R + L$); Transient Conditions on Switching-on; Commutation in Bi-phase Circuits.	
THREE-PHASE RECTIFICATION	258
Three-phase Star Connection (<i>a</i>) Uncontrolled Rectification; Commutation; Inverse Voltage; (<i>b</i>) Controlled Rectification; Three-phase Double-star Connection.	
BRIDGE CIRCUITS FOR RECTIFICATION	264
Single-phase Bridge; Three-phase Bridge.	
CURRENT AND VOLTAGE RELATIONSHIPS IN SOME STANDARD RECTIFIER CONNECTIONS	268
RECTIFICATION AND INVERSION	269
Commutation.	
VOLTAGE OUTPUT REGULATION	275
Components of Regulation; Regulation during Rectification; Regulation in Biphasic Circuits; Regulation during Inversion.	
A.C. CONTROL	283
Inverse-parallel Connection; Three-phase to Single-phase Frequency Changer Circuits.	
PULSING CIRCUITS	294
The Relaxation Circuit; Capacitor Discharge—Single Pulses; Exponential Discharge; Recurrent Square-wave Pulses.	
THE PARALLEL INVERTER	302
SWITCHING DUTY	305
Parallel Connection with Mechanical Switch.	
CONDITIONS AT COMMUTATION	311
Importance of Conditions at Commutation; Arc-back Factor; Commutation Factor; Rate of Current Fall; Approximate Calculation of Final Current-Slope at Commutation; Effects of Reactance and Phase Retard; Commutating Reactors; Rise of Inverse Voltage.	
ARC-BACK—PROTECTIVE MEASURES	316

	<i>Page</i>
8 CONTROL CIRCUITS	321
GRID CONTROL	321
Forms of Grid Control; Screening and Deionizing Grids; Control Grids—Voltage Requirements; Negative Hold-off Voltage; Loss of Control due to Voltage Surges; Arc Initiation.	
GRID CONTROL CIRCUITS	326
On/Off Control; Continuous Control.	
PHASE-SHIFTING BRIDGE CIRCUITS	334
GENERATION OF VOLTAGE OF PEAKED WAVE FORM	338
AUXILIARY ANODE CIRCUIT	341
IGNITOR CIRCUITS	344
General Requirements; Anode Firing; Separate Excitation.	
TYPICAL EXAMPLE OF CONTROL CIRCUITS	349
9 RATINGS AND SPECIFICATIONS AND THEIR INTERPRETATION	354
INTRODUCTION	354
Valve Ratings; Ratings Related to Arc Voltage-drop; Ratings Related to Movement of Charged Particles; Forms of Failure; Standardized Ranges; Overload Ratings—Rectifier Ignitrons; Determination of Rating Limits; Factors Specified in Ratings.	
ANODE CURRENT RATINGS	359
Ratings to be Specified; Mean-Current Rating—Relation to Temperature; Mean-Current Rating—Commutation Limits with Phase Control; Mean Current—Relating Measurement to Rating; Averaging-time and Duty-cycle; Root-Mean-Square Value of Current; Peak Value of Current; Fault Current; Minimum Current; Rate of Current Change—Current Rise; Rate of Current Change—Current Fall.	
ANODE VOLTAGE RATINGS	370
Anode Voltage—Maximum Forward; Anode Voltage—Maximum Inverse; R.M.S. Voltage Rating.	
OPERATING FREQUENCY	372
COMMUTATION	372
Arc-back Factor; The Commutation Factor.	
AUXILIARY ANODE RATINGS	373
GRID RATINGS	374
Control Characteristic; Grid Current; Grid-Circuit Resistance; Negative Grid Voltage before Conduction; Negative Grid Voltage during Conduction; Positive Grid Voltage and Current.

IGNITOR REQUIREMENTS		380
Specifications and Interpretation.		
THE RATING OF IGNITRONS FOR A.C. CONTROL		381
Circuit Relationships; Rating based on Arc Characteristics;		
Rating Tables; Empirical Basis for Rating; Examples of		
Ratings; Rating of Ignitrons for Intermittent Rectifier Duty.		
10 GENERAL NOTES ON OPERATION AND MAIN-		
TENANCE		395
INTRODUCTION		395
CHOICE OF VALVE		395
Hot-Cathode v. Pool-Cathode Valves; Choice of Hot-Cathode		
Thyratron.		
INSTALLATION		397
Method of Mounting; Cleanliness; Screening from External		
Fields; Water-Cooling; Condensation Temperature in Mercury		
Vapour Valves; Anode Pre-heating; X-ray Screening.		
THE HOT CATHODE		403
Heating Supplies; Cathode Heating Time.		
THE GRID CIRCUIT		404
THE ANODE CIRCUIT		405
VALVE LIFE		407
Maintenance; Periodic Tests of Valve Characteristics; Inspection		
for Suspected Faults.		
APPENDICES		
1 UNITS		413
Momentum; Force; Three Kinds of Force; Gravitational Units;		
Magnetic and Electrostatic Units; Two Systems of Electrical		
Units; Four Units of Charge; Current-Three Units. Energy:		
Potential Energy; Electrical Potential; Energy in Electron		
Volts; Kinetic Energy; Power; Capacity.		
2 FIELDS OF FORCE		421
Field Strength; Flux; Charge, Field Strength and Potential.		
3 GASES AND VAPOURS		425
Pressure; Pressure and Density; Quantity of Gas: the Gramme-		
Molecule (or Mole); Pressure p , Volume V and Temperature T ;		
Distribution of the Velocities of the Particles; Mean Free Path-		
Neutral Molecules and Charged Particles.		
4 PARTICLE CONCENTRATIONS		433
Boltzmann's Relation.		
5 PHYSICAL CONSTANTS		436
INDEX		437
