List of symbols	xiii
1. Introduction	1
REFERENCES	2
2. Processes of generation, attachment, and recombination of charged species	3
PART I. HOMOGENEOUS GAS-PHASE	3
Kinetic theory	3
<i>Ionization processes</i>	6
(i) Ionization by collision	7
(ii) Electron transfer	8
(iii) Ionization by transfer of excitation energy	10
(iv) Chemi-ionization	10
Electron attachment, charge exchange, and clustering	10
<i>Electron attachment</i>	10
(i) Radiative attachment	11
(ii) Three-body attachment	11
(iii) Dissociative attachment	12
<i>Charge exchange processes</i>	13
Electron transfer	13
Charge transfer with chemical rearrangement	14
<i>Clustering</i>	16
Recombination	16
(i) Three-body recombination	17
(ii) Dissociative recombination	19
(iii) Mutual neutralization	20
Thermal ionization in the gas phase	20
PART II. GAS-SOLID SYSTEMS	23
Electron emission from surfaces	23
<i>Thermionic emission</i>	23
(i) In the absence of applied fields	23
(ii) In the presence of applied fields	24
<i>Impact and photo-emission</i>	26
Thermal ionization of particles	27

Particle charging in regions of space charge	28
(a) <i>Charging without thermionic emission</i>	29
(i) Bombardment charging	29
(> 0.5 μm radius)	
(ii) Diffusion charging	31
(< 0.1 μm radius)	
(b) <i>Charging in presence of thermionic emission</i>	32
(i) Assisting fields	33
(ii) Adverse fields	34
REFERENCES	35
3. Combustion processes and burner systems	38
Definition and presentation of subject	38
THE FINAL STATE	40
REACTION IN FLAMES, THEIR MECHANISMS OF PROPAGATION AND BURNING	45
Propagation of pre-mixed flame	47
<i>Detonation</i>	53
<i>Augmented flames and high intensity combustion</i>	55
Diffusion flames	57
BURNERS	61
Burners for pre-mixed reactants; simple tubes	61
Burners producing freely stabilized flat flames (pre-mixed reactants)	66
Flat flames stabilized by heat losses (pre-mixed reactants)	68
Spherical flames (pre-mixed reactants)	70
Burners based on nozzles and on tubes of non-circular cross-section (pre-mixed reactants)	70
High-intensity burners (pre-mixed reactants)	71
Burners for stabilized detonations and electrically augmented flames (pre-mixed reactants)	75
' <i>Augmented flames</i> '	79
Burners for diffusion flames	92
Heterogeneous systems	96
<i>Reactants separate</i>	96
<i>Solid propellants</i>	100
REFERENCES	101
4. Effects of fields on ions, electrons, charged particles, and on their carrier gas	106
Dipoles	111
MOBILITY OF CHARGE CARRIERS	112
Molecular ions	113
<i>Mobility in mixtures of gases</i>	117

<i>Diffusion of ions</i>	117
Electrons	119
<i>Electron mobility and conductivity in gas mixtures</i>	121
<i>Electron temperature, mobility and conductivity at high (E/P)</i>	123
<i>Mobility in a magnetic field</i>	126
<i>Mobilities of droplets and particles</i>	127
ELECTRICAL BREAKDOWN IN GASES	136
FORCE ON NEUTRAL GAS: 'IONIC WIND'	141
REFERENCES	154
5. Experimental methods for the study of flame ionization	156
'INTERNAL' METHODS	158
Measurement of mobility	158
The measurement of conductivity, charge concentration, and electron temperature	161
<i>D.c. conductivity measurements</i>	161
<i>Langmuir probes</i>	163
(i) Collisionless theory	169
(ii) Collision dominated extra-sheath and collision-less sheath	171
(iii) Collision dominated sheath and extra-sheath	173
<i>Double probes</i>	176
Measurements using resonant circuits and propagating waves	178
<i>A.c. conductivity</i>	179
<i>Resonance of a.c. circuits</i>	182
<i>Propagation of electromagnetic waves through plasmas</i>	188
Reflection	189
Attenuation	190
Refractive index	192
'EXTERNAL' METHODS	193
Current densities	194
Identification of ions: mass spectra and mobility determination	200
Mobilities outside flame gases	207
REFERENCES	211
6. Ionization in flames	214
NATURAL FLAME IONIZATION	214
Occurrence, concentration, and identity of flame ions	214
Rates of ion generation and the influence of pressure, temperature, and composition	218
Recombination and ambipolar diffusion	223

Mechanism of ion formation and recombination	224
<i>Ion formation</i>	224
CHO^+	227
C_3H_3^+	228
<i>Charge recombination</i>	229
IONIZATION IN THE PRESENCE OF ADDITIVES	229
Non-equilibrium ionization of additives	229
Lead	229
Alkali metals	230
Halogens	233
Alkaline earths	233
Ionization augmented by applied electric fields	234
Equilibrium ionization of additives	235
<i>Homogeneous gas phase</i>	235
<i>Particle suspensions</i>	237
REFERENCES	239
7. Practical consequences and applications	242
MOVEMENT OF CHARGE CARRIERS	242
Electrolysis	242
<i>Large charge-carriers</i>	243
'Direct' generation of electricity	258
<i>MHD Generation of electricity</i>	259
Faraday generator	262
Hall generator	263
<i>EGD Generation of electricity</i>	270
Plate generator	271
Tube generator	273
<i>Calorelectric effect</i>	276
Movement of charge in methods of detection and measurement	278
<i>Movement of charge in oscillating fields</i>	282
MOVEMENT OF NEUTRAL GAS	285
Electric fields	285
Crossed current and magnetic field vectors	307
REFERENCES	311
8. Distribution of the electrical parameters and limitations to practical effects	315
THE DISTRIBUTIONS OF FIELD AND CHARGE	317
Within the reaction zone	317
(a) <i>Slow ion removal</i>	318
(b) <i>Saturation</i>	319
(c) <i>Sub-saturation</i>	320
(d) <i>Super-saturation</i>	322

<i>Effect of approximations</i>	323
Outside the flame	323
Maximum effects attainable by fields	330
THE USE OF MAGNETIC FIELDS	336
