

CONTENTS

Preface	
ORGANIZATION OF THE SYMPOSIUM	
INVITED PAPERS	
1. The general theory of electron emission and its recent experimental proof S.G.Christov	20
2. The mechanism of flashover across solid insulators in vacuum J.D.Cross	24
3. Investigation of cathode spot with high time & space resolution V.I.Rakhovsky	38
4. Cathode processes at electron explosion emission E.A.Litvinov, G.A.Mesyats, D.I.Prouskourovsky, E.B.Yankelevitch	55
5. A review of the development of self-focused flows in high current diodes G. Yonas	70
I. CONDUCTION PROCESSES	
1.1. Predischarges Phenomena	
1.1.1. The initiation of cathode induced vacuum breakdown by dynamic field emission (DF-emission) from microprotrusions J.Mitterauer, P.Till, A.Fraunschiel and M.Haider	83
1.1.2. Critical parameters of field emission at breakdown in UHV B.Jüttner, V.F.Puchkarov, W.Rohrbeck, H.Wolff	88
1.1.3. Impact of low speed microparticles on a target in a small electric field C.Textier	92

1.1.4. Experimental studies of the impact behaviour of low-velocity charged microparticles A.S.Brah, K.Fok, R.V.Latham	97
1.1.5. Desorption effects on electrical breakdown under pulse heating of wires in ultrahigh vacuum S.M.Karakhanov, V.V.Polyudov	101
1.1.6. Sorption phenomena in vacuum gap electrodes at high voltages A.L.Shapiro, A.S.Pokrovskaya-Soboleva, V.I.Razgouljaeva, L.K Mazyrova.	105
Breakdown Phenomena	
1.2.1. Current emission and electrical breakdown in vacuum using bismuth electrodes L.Altcheh and R.Hackam	108
1.2.2. Total voltage effect and enhanced electric macrofield strength in vacuum breakdown experiments N.Tatarinova	113
1.2.3. Influence of the anode temperature on the electrical breakdown of a vacuum gap M.M.Zilberman and V.F.Anisimov	117
1.2.4. Dynamics and heating of anode particles in vacuum breakdown D.Kenneth Davies and Manfred A.Biondi	121
1.2.5. On the anode surface markings resulting from DC breakdown in high vacuum R.K.P. Sinha	125
2.1.2.6. Problems of the forecasting of the electrical strength of pulse-voltage CM vacuum gaps A.A.Yemelyanov, I.I.Kalyatskiy, G.M.Kassirov, G.V.Smironov	130
1.2.7. Study of vacuum breakdown at very short distances D.Biau R.Haug	134

1.2.8.	Study of the transition to the breakdown in vacuum by perveance variations M.Goldman, R.Haug, P.Ravary	I39
1.2.9.	Anode plasma appeared at pulse breakdown of vacuum gap R.B.Baksht, V.I.Koshelev, N.A.Ratakhin, V.P.Stasyev, M.N.Timofeev	I44
1.2.10.	On local plasma diagnostics of vacuum breakdown V.V.Pickalov, N.G.Preobrazhensky, G.I.Smirnova	I48
1.2.11.	Mass spectrometric investigation of the low-current discharge plasma V.I.Derzhiev, A.V.Grechischnikov, G.I.Ramendik, J.V.Vasjuta, V.F.Ivanova	I52
1.2.12.	Vacuum electrical breakdown initiated by electron beam P.V.Poshekhonov, A.M.Ryzhkov, V.I.Solovyev.	I56
1.2.13.	Vacuum breakdown in non-uniform electric fields G.R.Govinda Raju and R.Hackam	I60
1.2.14.	Effect of ambient gas pressure on 60 HZ breakdown in vacuum T.K.Ganju and K.D.Srivastava	I65
1.2.15.	Breakdown voltage increase in a vacuum gap due to gas desorption from electrode surfaces A.S.Pokrovskaya-Soboleva, A.L.Shapiro, V.I.Razgoulyayeva, T.S.Borisova	I69

EMISSION AND SURFACE PHENOMENA

1.	Anomalous field emission sites on polished electrodes B.M.Cox and W.T.Williams	I76
----	--	-----

- 2.2. High intensity explosive emission
V.M.Zhukov, G.N.Fursev
- 2.3. Displacement of field emitters by vacuum
discharges
B.Jüttner, W.Rohrbeck
- 2.4. Behaviour of micropoints during high
voltage vacuum discharges
B.Jüttner, V.F.Putchkarjov, W.Rohrbeck
- 2.5. A simple scanning electron microscope
with carbon fibre emitter for in situ
observation of UHV-gaps
W.Rohrbeck, B.Jüttner, B.Siemroth
- 2.6. A method for in situ investigation of
clump-transport in UHV
P.Pech, H.Wolff, B.Jüttner, B.Altrichter,
J.Achtert
- 2.7. High current field emission whisker cathode
T.A.Poshekhonova, A.A.Nosov, V.M.Gennadyev,
N.P.Ovsyannikov, D.I.Nosova
- 2.8. About some estimates of the role of electrode
geometry in vacuum field-emission diodes
S.L.Bazhenov, V.G.Zhurbenko, V.A.Nevrovsky
- 2.9. On field crystal growth of refractory metals
in high vacuum
V.G.Pavlov, V.N.Shrednick
- 2.10. One of the ways to obtain the highest possible
field emission current density
V.G.Pavlov and V.N.Shrednick
- 2.11. On the mechanism of breakdown initiation:
protrusion growth by ion bombardment.
J.V.Cavaille, M.Drechsler
- 2.12. Field-emission microscopy of microdimensional
crystals
G.N.Fursev, V.M.Zhukov, Yu.Ya.Chibukov,
G.I.Yasnov, V.I.Grishanov, S.A.Polezhayev

13. Evolution of electrode microgeometry in strong electric fields G.N.Fursey, I.D.Ventova, L.M.Baskin, A.M.Kovnatsky, Yu.F.Matiusnichev, S.A.Polezhaev	226
14. Cathode surface microrelief formation at the explosive electron emission G.A.Mesyats, D.I.Proskourovsky, E.B.Yankelevitch	230
15. Liquid cathodes to study high voltage breakdown L.Pranevičius, S.Šeržentas, J.Bartašius	234
16. Drift of adsorbed electropositive atoms in non-uniform electric fields E.V.Klimenko, A.G.Naumovets	238

3. FLASHOVER ACROSS INSULATORS

1. Photography of pulse flashover of oxide coated insulators in vacuum K.D.Srivastava, J.D.Cross, C.R.Thayer	243
2. Flashover in vacuum A.A.Avdienko, N.I.Alinovski, M.D.Malev	247
3. Study of surface flashover of conical insulators using 3 ns risetime pulses R.A.Anderson	252
4. Investigation of an accumulation of a charge on dielectric and metal surfaces in vacuum under the action of flows of charged particles V.N.Koschienko	257
5. Investigation of the influence of a charge accumulated on a surface on the electric strength of insulators in vacuum O.I.Kondratov, V.N.Koschienko, I.P.Kuzekin	261

3.6. Changes on insulator surface under the influence of strong electric field in vacuum B.Mazurek & A.Tyman	265
3.7. AC flashover voltage in vacuum for different electrode diameters and different pressures A.Tyman	270
3.8. Breakdown of a liquid-dielectric vacuum- surface B.N.Yablokov	274
3.9. AC predischarges phenomena in vacuum for insulator-electrodes arrangement depending on insulator height Hanna Mościcka Grzesiak	278
3.10. Some investigation of high-voltage vacuum insulation N.Hamidov, U.A.Arifov, S.D.Isamuhamedov, M.G.Kelman, A.Agsamov	282
4. ELECTRICAL ARC IN VACUUM	
4.1. Ion velocities and the correlation between HF fluctuations of the arc voltage and the ion current in vacuum arcs W.M. de Cock and J.E.Daalder	288
4.2. Generation of ion mass flow in vacuum arcs J.E.Daalder	293
4.3. Ion currents in the vacuum arc Z.Zalucki, J.Kutzner	297
4.4. Cathode spot damage in gold films on sapphire substrates J.P.Brainard and D.W.Larson	303
4.5. On near-cathode region processes on film cathodes of the vacuum arc I.I.Beilis, G.A.Lubimov	308

4.6.	The energy balance of a vacuum arc in an axial magnetic field J.Foosnaes, W.G.J.Rondeel	312
4.7.	The threshold currents of an arc discharge S.A.Krat'ko, I.G.Nekrashevitch	317
4.8.	The connection of cathode drop with vacuum arc electrode erosion V.A.Lapshin, I.G.Nekrashevitch	321
4.9.	Droplet emission from vacuum arc spots E.Hantzsche	324
4.10.	Propagation of charges in vacuum arc in transverse magnetic field K.Stefaniak	328
4.11.	Determination of parameters of the powerful arc plasma by volt-ampere characteristics and inverse current V.I.Sysun, U.D.Hromoy, O.V.Oleschuk, A.M.Arsh	333
4.12.	"Shock"-electrical ionization wave in a weakly ionized plasma E.I.Asinovsky, A.V.Kirillin, V.V.Markovets, I.M.Vasiljak	336
4.13.	Numerical simulation of vacuum discharge plasma decay after the current cut-off A.A.Filyukov, A.Yu.Zakharov, G.I.Ramendik, V.I.Derzhiev	339
4.14.	About the heat-physical analogues of erosion processes during the action of charged particles on the metals N.B.Belan, H.I.Kostjuk, E.P.Mishelov, V.A.Pimkin, V.A.Tkachenko	343

5. APPLICATIONS

5.1. High-current Diode and Vacuum Tubes

- 5.1.1. The generation of intense electron beams in magnetically insulated diodes
A.A.Kolomensky, E.G.Krastelev,
V.A.Papadichev, B.N.Yablokov
- 5.1.2. Formation of powerful beam of relativistic electron in vacuum diode
E.L.Boyarintsev, V.A.Kornilov, V.M.Lagunov
- 5.1.3. Forming of hollow relativistic electron beams of microsecond duration
A.N.Didenko, I.Z.Gleizer, V.I.Smetanin,
A.A.Shatanov, V.I.Tsvetkov, Yu.P.Usov
- 5.1.4. Potential well formation of the front of a relativistic electron beam
V.M.Bistritsky, A.N.Didenko, Yu.P.Usov,
V.N.Shustova
- 5.1.5. Vacuum tubes for Elit type high voltage pulse accelerators
S.B.Vasserman, I.V.Kazarezov, E.I.Pokhlebenin,
V.M.Radchenko, N.I.Saputin, N.R.Skorodumov,
V.V.Schirokov
- 5.1.6. Electron beam parameter calculation in coaxial vacuum diode
S.Ya.Belomytsev, V.M.Sveshnikov, G.S.Popova
- 5.1.7. Collective acceleration of ions in vacuum diode
S.P.Bougaev, V.I.Koshelev, M.N.Timofeev
- 5.1.8. Electron beam production out of cathode flare plasma with limited emissivity
E.N.Abdullin, G.P.Bazhenov, S.P.Bougaev,
S.M.Chesnockov, O.B.Ladyzhenski

5.1.9. Vacuum diodes and apparatus generating nanosecond pulses of X-rays and fast electrons E.G.V.Aleksandrovitch, N.V.Belkin, K.F.Selensky, N.I.Komyak, E.A.Peliks, I.A.Troshkin, V.A.Zuckerman	383
5.1.10. Generation of high-power subnanosecond electron beams in diode with explosive emission B.M.Kovaltchuck, G.A.Mesyats, V.G.Shpack.	387
5.1.11. Flash X-rays time and spectral characteristics under conditions of vacuum discharge V.P.Abramov, V.I.Gorbunov, A.S.Kuleshov, V.K.Kuleshov, S.P.Vavilov	391
5.1.12. Voltage tests of the Daresbury ceramic tube submodule D.A.Eastham, A.E.Groome and P.S.Powell	395
5.1.13. DC high-voltage accelerator tube A.A.Avdienko, A.N.Krjutschkov, N.K.Kuksanov, M.D.Malev, R.A.Salimov, A.N.Scharapa	399
 2. Vacuum Switches	
5.2.1. On the controlled nanosecond power current vacuum switches P.N.Dashuk, P.G.Popov	403
5.2.2. Initial stages of controlled breakdown in high voltage heavy current vacuum switches G.S.Kichaeva, P.I.Shkuropat	406
5.2.3. Low inductance vacuum switch for 50 kV, 100 kJ capacitor bank system V.M.Fedorov, M.A.Shcheglov, V.N.Ponurov, P.P.Deichuly	410
5.2.4. A spectrograph for studies of discharges S.K.Händel and B.Sundbom	415
5.2.5. The study of some characteristics of the high current metal-vapour arc in the gap devices A.I.Vishnevsky, A.S.Vorobjev, S.S.Zaidman, V.I.Kryzhanovsky, A.I.Kuzmichov, J.D.Khromoj, A.I.Shendakov, L.N.Shmurov.	420

5.2.6	About the possibilities of construction of low voltage synchronous vacuum switches Marek Bartosik	424
5.2.7.	Influence of the arc and circuit parameters on the chopping current and overvoltages Z.Tarocinski. Z.Kolacinski	429
5.2.8.	Investigation of arc in contact systems of vacuum interrupters I.A.Lukatskaya, S.M.Selikatova	434
5.2.9.	Erosion mechanism of contact surfaces of vacuum high-voltage control switches A.S.Ivanikov, V.V.Oreshkin, P.Poshekhonov	438
5.2.10.	Determination of arc and arcless current breaking zones by fuse wire under vacuum Cz.Krolikowski, M.Strofinski	441
5.3. Insulation Techniques		
5.3.1.	Complex conditioning method in the vacuum electrical breakdown studies A.L.Radionovski, and D.S.Treshchikova	446
5.3.2.	High voltage breakdown during conditioning of X-ray tubes D.Peter, K.Reiber, P.Schreiber	450
5.3.3.	Increase of electric strength of high-voltage vacuum gaps by ion bombardment U.A.Arifov, T.U.Arifov, M.Y.Asliiddinova, D.D.Gruich, V.P.Peshekhonov, T.D.Radjabov	454
5.3.4.	Backfire, an upper load limit of rotating-anode X-ray tubes for medical diagnosis G.Appelt, H.Dietz, R.Friedel, E.Geldner	458

5.3.5. Hollow cathode glow discharge as a means of increasing electrical strength in vacuum gap P.N.Chistyakov, N.P.Dubinin	463
5.3.6. Influence of cathode sputtering on breakdown development in the high voltage discharge system E.V.Chickin, L.A.Levshuk, D.A.Noskov	467
5.3.7. Instabilities of vacuum electron devices caused by barkhausen-kurz oscillations J.Hennel, S.Pytkowski	471
