	Acknowledgments	ix
1	Introduction	1
	1.1 Light – Man's Most Important Product	1
	1.2 Electric Discharge Lamps	2
	1.3 Features Common to All Electric Discharge Lamps	3
	1.4 Some Definitions	7
	1.5 Brief Outline	10
	References	10
2	Mercury-Rare-Gas Discharges and Fluorescent Lamps	11
	2.1 Introduction	11
	2.2 Basic Properties of the Low-Pressure Mercury-Rare-Gas Discharge	13
	References	46
3	Ignition or Starting of the Fluorescent Lamp Discharge	47
	3.1 Physical Phenomena Involved in Discharge Ignition	47
	3.2 Starting Circuits for Fluorescent Lamps	56
	3.3 The Penning Effect	63
	3.4 Field Concentration and Wall Effects	67
	References	70
4	The Electrodes	71
	4.1 Introduction	71
	4.2 Important Physical Processes at the Cathode	76
	4.3 Important Physical Processes at the Anode	109
	References	112

5	Mathematical Descriptions of the Positive Column of Fluorescent Lamps	114
	5.1 Introduction 114	
	5.2 The Pioneering Work of Carl Kenty 114	
	5.3 The Analysis of Waymouth and Bitter 116	
	5.4 The Analysis of Cayless 136	
	5.5 Comparison of Theories with Experiment 137	
	5.6 Noncircular Cross-Section Lamps 143	
	5.7 Theories on the Time-Dependent Discharge 149	
	References 149	
6	High-Pressure Mercury Lamps	151
	6.1 Introduction 151	
	6.2 Local Thermal Equilibrium and the Radial Temperature Variation 160	
	6.3 The Electrodes 174	
	6.4 Ignition 180	
	6.5 Phosphor-Coated Mercury Lamps 186	
	References 186	
7	Low- and High-Pressure Sodium Lamps	187
	7.1 Introduction 187	
	7.2 The Low-Pressure Sodium Lamp 187	
	7.3 The High-Pressure Sodium Lamp 196	
	References 205	
8	Metal Halide Arc Lamps	206
	8.1 Introduction 206	
	8.2 Characteristics of Lamps Based on the Metal Halide Principle 211	
	8.3 Influence of Metal Iodides on the Arc 216	
	8.4 The Effects of Arc Tube Geometry 231	
	References 234	

9	Electrode Behavior in Metal Iodide Lamps	235
	9.1 Introduction	235
	9.2 Behavior of Various Types of Metals in a Halogen Atmosphere	236
	9.3 Measurements of the Thorium Removal Rate	242
	9.4 Behavior of Other Metals	247
	9.5 Other Types of Electrodes	250
	9.6 Outlook for the Future	252
	References	253
10	Problems Unique to Metal Iodide Arc Lamps	254
	10.1 Introduction	254
	10.2 Starting	254
	10.3 Reignition Voltage	258
	10.4 Electrolysis	264
	10.5 Sodium Loss Processes	266
	10.6 Losses of Other Metals	277
	References	278
11	Theoretical Analysis of the Metal Iodide Arc	279
	11.1 Introduction	279
	11.2 Chemical Equilibria	279
	11.3 Radial Temperature Distribution	286
	11.4 A Critical Evaluation of the Status of the Theory	304
	References	306
12	Operating Circuits for Electric Discharge Lamps	307
	12.1 Introduction	307
	12.2 General Characteristics of AC Ballast Circuits	307
	12.3 Comparison of "Lead" and "Lag" Type Ballasting Circuits	322
	12.4 Ballast Requirements of Major Lamp Types	325
	12.5 Semiconductor Ballasts	334
	References	335
	Appendix A Ambipolar Diffusion	336
	Appendix B Probe Measurements in Plasmas	339
	Appendix C	346
	Index	349
