Preface	v
1. The Physical Characteristics of Electric Discharges	1
<i>Alexis Bell, Department of Chemical Engineering, Massachusetts Institute of Technology</i>	
1.1. Introduction	1
1.2. Direct-Current Discharges	2
1.3. High-Frequency Discharges	9
2. Techniques for the Generation of Continuous High-Temperature Gas Flows	13
<i>Richard R. John, AVCO Space Systems Division, Research and Technology Laboratories</i>	
2.1. Introduction	13
2.2. Joule-Heating Energy-Transfer Processes	14
2.3. MPD Energy-Transfer Processes	22
2.4. Applications	24
3. Chemical Uses of Induction Plasmas	26
<i>Thomas B. Reed, Lincoln Laboratory, Massachusetts Institute of Technology</i>	
3.1. Plasma Chemistry	26
3.2. Induction Plasma Generation	28
3.3. Comparison of Induction and Electrode Plasma Generation	30
3.4. Gas-Solid Reactions	30
3.5. Gas-Phase Reactions	32

4. Chemical Syntheses in Radio-Frequency Plasma Torches	35
<i>Claude P. Beguin, James B. Ezell, Antonio Salvemini, James C. Thompson, David G. Vickroy, and John L. Margrave, Department of Chemistry, Rice University</i>	
4.1. Introduction	35
4.2. Design of the Plasma Torch	36
4.3. Diameter of the Discharge	37
4.4. Diameter of the Tube	40
4.5. Initiation of the Discharge	41
4.6. The Generator and Its Match with the Load	42
4.7. Measurement of the Power Delivered to the Plasma	43
4.8. Design of the Plasma Reactor	44
4.9. Synthesis of NO	46
4.10. Preparation of Chlorofluorocarbons	49
5. Plasma Diagnostics	54
<i>J. Charles Ingraham and Sanborn C. Brown, Physics Department, Massachusetts Institute of Technology</i>	
5.1. Microwave Plasma Diagnostics	54
5.2. General Plasma Diagnostic Techniques	82
6. Chemical Reactions in a Microwave Discharge	87
<i>Raymond F. Baddour and Peter H. Dundas, Department of Chemical Engineering, Massachusetts Institute of Technology</i>	
6.1. Introduction	87
6.2. General Considerations	88
6.3. Application of Microwave Techniques	90
6.4. Mechanism of Microwave Discharge	90
6.5. Conditions for a Cold Plasma	92
6.6. Chemical Rearrangements and Syntheses	92
6.7. General Discussion	96
7. Nitrogen Fixation	99
<i>Robert S. Timmins and Paul R. Ammann, Avco Corporation</i>	
7.1. Introduction	99
7.2. Nitric Oxide	100
7.3. Hydrogen Cyanide	111
7.4. Cyanogen	119
7.5. Arc Operation	124
7.6. Process Applications	127
Appendix	128

8. Reaction of Graphite and Hydrogen Above 2000°K	132
<i>John T. Clarke, Brookhaven National Laboratory</i>	
8.1. Introduction	132
8.2. Thermodynamic Calculations of the Equilibrium of Carbon and Hydrogen	133
8.3. Equilibration in the Graphite-Hydrogen System	139
8.4. Experimental Work on the Reaction of Graphite and Hydrogen	140
8.5. Work Applicable to the Determination of the Equilibrium Composition	140
8.6. Work Applicable to the Kinetics of the Reaction of Graphite and Hydrogen	146
8.7. Mechanism of the Reaction of Vaporized Graphite with Hydrogen	152
8.8. An Application of Graphite Filament Studies to the Production of Acetylene	154
9. Fluorine Reactions in Plasma	157
<i>Barry R. Bronfin, Research Laboratories, United Aircraft Corporation</i>	
9.1. Introduction	157
9.2. Fluorocarbon Synthesis in a High-Intensity Arc	160
9.3. Nitrogen Fluoride Synthesis in a Plasma Jet	171
9.4. Fluoride Syntheses in Electric Discharges	184
9.5. Future Work	194
Index	201
