

Contents

1. Instrument Design and Description

G. E. Spangler and M. J. Cohen

1. Introduction	1
2. Equipment Description	3
3. Performance Description	9
3.1. Generation of Negative Sample Ions	9
3.2. Ion Extraction and Shutter Grid Operation	11
3.3. Separation of Ions by Mobility	13
3.4. Generation of the Ion Mobility Spectrum (Ion Arrival Time Spectrum)	14
4. Spectral Interpretation	15
4.1. Ion Mobility	15
4.2. Reaction Chemistry	17
5. Theoretical Description	19
5.1. Reactor Theory	19
5.2. Drift Theory	24
6. Sample Handling	27
6.1. Sample Wire Probe	28
6.2. Syringe Injection	29
6.3. Exponential Dilution Flask	30
6.4. Calibrated Standard Generators	31
6.5. Inlet Oven	31
6.6. Ambient Air Sampling	31
7. Plasma Chromatography as a GC Peak Identifier	32
7.1. Background of PC	34
7.2. Pure Sample into PC	34
7.3. Background of GC	34
7.4. Sample Injection—FID Response	35
7.5. PC Response	36
8. Plasma Chromatography and Mass Spectrometry	37
References	39

2. Ion Mobility: Its Role in Plasma Chromatography

E. A. Mason

1. Introduction	43
2. Kinetic Theory of Ion Transport	46

2.1. Summary of Main Results	46
2.2. Elementary Derivations	52
2.3. Ion-Molecule Forces and Mobility	57
2.4. Inelastic Collisions and Nonspherical Ion-Molecule Interactions	68
3. Applications to Plasma Chromatography	69
3.1. Consistency with Drift-Tube Data	69
3.2. Comparison with Polarization Limit	69
3.3. Variation of Electric Field Strength and Drift-Gas Pressure	73
3.4. Variation of Drift Gas	73
3.5. Multiply-Charged Ions	77
3.6. Mass-Mobility Correlation	80
3.7. Correlation with Vapor Diffusion Coefficients	83
3.8. Pulse Width and Shape	84
3.9. Ion-Molecule Reactions in the Drift Region	87
4. Concluding Remarks	89
References	90

3. Atmospheric Pressure Ionization

M. W. Siegel

1. Introduction	95
2. Rate Equations Describing API	96
2.1. Reagent Ion Production	97
2.2. Sample Ion Production	99
2.3. Sample Molecule Depletion	100
2.4. Summary of Processes	102
3. Application of Rate Equations to a ⁶³ Ni API Source	102
3.1. Primary Ionization	102
3.2. Diffusion	102
3.3. Recombination	103
3.4. Reagent Ion Density	103
3.5. Sample Ion Density	104
3.6. Sample Ion Current	105
3.7. Flow Rate Optimization	105
3.8. Source Radius Optimization	108
3.9. Meaning of "Small Sample Limit"	108
3.10. Sample Quantity vs. Sample Concentration	109
4. Summary, Conclusions, and Thoughts on Future Work	110
Notation	110
References and Notes	112

4. Characterization of Isomers by Plasma Chromatography

D. F. Hagen

1. Introduction	115
2. Sampling Requirements and Data Acquisition	116

2.1. Sampling Interfaces	116
2.2. Sample Size—Reactant Ion Level	118
2.3. Derivative Stabilization	119
2.4. Timing Factors	120
3. Molecular Ion Characteristics	121
3.1. Ion Behavior	121
3.2. Rearrangements of Molecular Ions	124
3.3. Ion Molecule, Size—Mass Relationships	126
4. Aromatic Positional Isomers	131
4.1. Substituted Toluenes and Chlorobenzoate Ester Homologs	131
4.2. Phthalate Ester Homologs	132
4.3. Trisubstituted Benzene Isomers	133
4.4. Isomeric Perfluidones and Methoxyperfluidones	134
4.5. Branched Chain Isomers	135
5. Cis-Trans Isomers	135
6. Polynuclear Aromatics	137
7. Aromatic Nitrogen Compounds	138
7.1. Dipyridyls, Phenyl Pyridines	138
7.2. Naphthalene Related Nitrogen Isomers	139
7.3. Picoline—Pyrazine Isomers	140
8. Concluding Remarks	140
References	141

5. Plasma Chromatography as a Gas Chromatographic Detection Method

Herbert H. Hill and Michael A. Baim

1. Ambient Pressure Ionization Detectors for Gas Chromatography	144
2. Sample Introduction	145
3. Qualitative Analysis	148
3.1. Moving Second Gate Method	149
3.2. Single-Scan Method	150
3.3. Signal Averaging Method	150
3.4. Qualitative GC Detection	150
4. Continuous Mobility Monitoring	157
5. Quantitative Analysis	161
5.1. Calibration Graphs	161
5.2. Precision	162
5.3. Accuracy	162
6. Interferences	163
6.1. Overload	164
6.2. Solvent Effects	165
6.3. Column Bleed	166
6.4. Matrix Interference	168
6.5. Residence Time	170
7. A Detector for Capillary Chromatography	171
References	175

6. Analysis of Toxic Vapors by Plasma Chromatography*R. J. Dam*

1. The Role of Plasma Chromatography in Toxic Gas Monitoring	177
1.1. Introduction	177
1.2. Advantages of Plasma Chromatography	178
1.3. Disadvantages of Plasma Chromatography	180
1.4. Selecting Suitable PC Monitoring Applications	183
1.5. PC Monitor Development Program at Du Pont	183
2. Plasma Chromatograph Calibration	184
2.1. Requirements of a Calibration Technique	184
2.2. Basic Concepts and Theory	185
2.3. Calibration Apparatus and Methods	189
2.4. Calibration Example	193
3. Sampling Systems	194
3.1. Design Goals	194
3.2. System Description	196
3.3. Measuring System Performance	198
3.4. System Enclosure	201
4. Instrument Control and Data Processing	201
4.1. General Considerations	201
4.2. Plasma Chromatograph Data Acquisition	203
4.3. Instrument Control and Hardware Status Monitoring	204
4.4. Software	205
5. Toxic Monitoring Applications	208
5.1. Workplace Characterization Improved	209
5.2. Instrument Proven Reliable	211
5.3. Maintenance Procedure	212
5.4. Future Work	213
<i>References</i>	213

7. Analysis of Semiconductor Devices and Microelectronic Packages by Plasma Chromatography/Mass Spectroscopy*T. W. Carr*

1. Introduction	215
2. Analysis of Organic Surface Contaminants	216
2.1. Introduction	216
2.2. Experimental Discussion	216
2.3. Discussion of Surface Analysis	219
3. Analysis of Water in Sealed Electronic Packages	225
3.1. Introduction	225
3.2. Negative Ion Measurements	225
3.3. Positive Ion Measurements	228
4. Analysis of Headspace Vapor of Sealed Packages	229
5. Plasma Chromatography as a Process Monitor	231
6. Extension of PC/MS to Small-Area Surface Analysis	233

7. Conclusion	234
<i>References</i>	234

8. Instrument Design and Automation*Roger F. Wernlund*

1. Introduction	237
2. Hardware	240
2.1. Central Processing Unit (CPU)	240
2.2. Peripherals	242
2.3. Interfacing	243
3. Software	244
3.1. Basic Data Acquisition	244
3.2. Basic Data Storage and Retrieval	245
3.3. Basic Data Reduction	245
3.4. Higher Level Command Structure	247
