

CONTENTS

	PREFACE	V
1.	INTRODUCTION	1
2.	THEORETICAL FUNDAMENTALS OF LOW-TEMPERATURE PLASMA	9
2.1	Thermally induced random motions of particles	9
2.1.1	Distribution of particle velocities	11
2.1.2	Effective cross sections of particles	13
2.1.3	Mean free path of particles	15
2.2	Elementary processes	17
2.2.1	Excitation of atoms and molecules	21
2.2.1.1	Excitation by collision with an electron	23
2.2.1.2	Excitation by collision with an atom or ion	25
2.2.1.3	Excitation by a light quantum	25
2.2.2	Dissociation	25
2.2.3	Ionization of atoms and molecules	31
2.2.3.1	Ionization by collision with an electron	34
2.2.3.2	Ionization by collision with an atom or ion	35
2.2.3.3	Ionization by a light quantum	36
2.2.3.4	Autoionization	37
2.2.3.5	Surface ionization	38
2.2.3.6	Cumulative ionization	39
2.2.3.7	Thermal ionization	39
2.2.3.8	Negative ions	42
2.2.3.9	Transfer of electrical charges	43
2.2.4	The Saha equation	43
2.2.4.1	Degree of ionization and electron concentration	46
2.2.5	Recombination	46
2.2.5.1	Recombination coefficients	47
2.2.5.2	Lifetimes of electrons and ions	49
2.3	Thermodynamic equilibrium of plasma in an electrical discharge	50
2.3.1	Partition functions	52

2.3.1.1	Partition function for translational motion	54
2.3.1.2	Partition function for rotational and vibrational energy	54
2.3.1.3	Partition function for electron excitation	55
2.3.2	Definitions of the thermodynamic properties of plasma	55
	References	56
3.	ELEMENTARY PROCESSES EXPLOITED IN PLASMA METALLURGY	57
3.1	Physical interactions of ions and electrons with an electrically insulated surface	58
3.1.1	Thickness of the plasma sheath	60
3.1.2	Transport of active particles across the thermal boundary layer and plasma sheath	62
3.1.3	Thermodynamic contribution of active particles to the energy balance of metallurgical reactions	63
3.1.4	Effects of active particles on the kinetics of metallurgical processes	68
3.2	Chemical reactions in plasmas, involving excited molecules, atoms, ions and radicals	69
3.2.1	Reactions of particles present in their atomic state in low-temperature plasmas	70
3.2.1.1	Reactions of atomic hydrogen	71
3.2.1.1.1	Reactions of atomic hydrogen with metals	72
3.2.1.1.2	Reactions of atomic hydrogen with oxygen	73
3.2.1.1.3	Reactions of atomic hydrogen with carbon	74
3.2.1.1.4	Reactions of atomic hydrogen with carbon monoxide	74
3.2.1.1.5	Reactions of atomic hydrogen with halogens and hydrogen halides	75
3.2.1.1.6	Reactions of atomic hydrogen with nitrogen, ammonia and hydrazine	75
3.2.1.1.7	Reduction of oxides by atomic hydrogen	75
3.2.1.1.8	Reactions of atomic hydrogen with inorganic halogenides	75
3.2.1.2	Reactions of atomic oxygen	76
3.2.1.2.1	Reactions of atomic oxygen with metals	77
3.2.1.2.2	Reactions of atomic oxygen with hydrogen	77
3.2.1.2.3	Reactions of atomic oxygen with carbon monoxide and carbon	78
3.2.1.2.4	Reactions of atomic oxygen with sulphur and its oxides	80
3.2.1.2.5	Reactions of atomic oxygen with halogens	81
3.2.1.2.6	Reactions of atomic oxygen with CCl_4	82
3.2.1.2.7	Reactions of atomic oxygen with silicon	83
3.2.1.3	Reactions of atomic nitrogen	83
3.2.1.3.1	Reactions of atomic nitrogen with oxygen	84
3.2.1.3.2	Reactions of atomic nitrogen with molecular hydrogen	85
3.2.1.3.3	Reactions of atomic nitrogen with carbon monoxide and carbon	85

3.2.1.3.4	Reactions of atomic nitrogen with sulphur and its compounds	86
3.2.1.4	Reactions of atomic chlorine with other elements	87
3.2.1.4.1	Reactions of atomic chlorine with inorganic substances	87
3.2.2	Reactions forming complex ions and compounds	88
	References	94
4.	GASES EMPLOYED IN PLASMA METALLURGY	97
4.1	Thermodynamic and transfer properties of plasma-forming gases	98
4.2	Argon	104
4.2.1	Thermodynamic properties of an argon plasma	105
4.2.1.1	Calculation of the partition function	106
4.2.1.2	Determining the composition, by particle kinds, of an argon plasma	109
4.2.1.3	Reduction of ionization potential in an argon plasma	113
4.2.1.4	Calculation of thermodynamic properties	113
4.2.2	Transfer properties of an argon plasma	119
4.2.3	Preparation of argon	120
4.2.4	Reducing the contents of admixtures in inert gases	126
4.2.4.1	Chemical methods for cleaning inert gases	127
4.2.4.2	Physico-chemical methods for cleaning inert gases	132
4.2.4.3	Physical methods for cleaning inert gases	134
4.2.4.4	Scheme of an argon cleaning system for plasma furnaces	135
4.3	Hydrogen	144
4.3.1	Thermodynamic properties of a hydrogen plasma	146
4.3.2	Transfer properties of a hydrogen plasma	157
4.3.3	Preparation of pure hydrogen	158
4.4	Nitrogen	160
4.4.1	Thermodynamic properties of a nitrogen plasma	162
4.4.2	Transfer properties of a nitrogen plasma	171
4.5	Oxygen	173
4.5.1	Thermodynamic properties of an oxygen plasma	174
4.5.2	Transfer properties of an oxygen plasma	175
4.6	Air	177
4.6.1	Thermodynamic properties of an air plasma	179
4.6.2	Transfer properties of an air plasma	179
	References	181
5.	LOW-TEMPERATURE PLASMA SOURCES FOR METALLURGICAL PURPOSES	185
5.1	Fundamentals of low-temperature plasma generation	187
5.2	Classification of discharges by the phenomena in the electrode and interelectrode regions	188

5.2.1	Characteristics of arc discharges as regards motions of active particles between the electrode and the processed material surface that forms a counter-electrode	190
5.2.2	Effects associated with the motion of active particles close to the surface of a charge forming the cathode	193
5.2.3	Effects associated with the motion of active particles close to the surface of a charge forming the anode	194
5.2.4	Characteristics of thermal plasma in the arc column	195
5.3	Simple circuit diagrams of metallurgical plasma torches	197
5.3.1	Characteristics of torches with non-transferable arcs	198
5.3.2	Characteristics of torches with transferable arcs	212
5.3.2.1	Forces acting on the plasma stream in transferable-arc torches	217
5.3.2.2	Factors influencing the heat transfer efficiency in transferable-arc torches	221
5.4	Combined circuit schemes for plasma torches	222
5.5	Design of non-transferable arc torches for metallurgical purposes	227
5.6	Design of transferable-arc torches for metallurgical purposes	230
5.7	Special types of plasma torches for metallurgical purposes	238
5.8	An a.c. high-voltage torch for metallurgical applications	239
5.9	Plasma torches for operation in a vacuum	241
	References	249
6.	CLASSIFICATION AND THERMODYNAMICS OF THE BASIC PLASMA METALLURGICAL PROCESSES.	251
6.1	Plasma in states of thermal equilibrium and non-equilibrium	251
6.2	Homogeneous and heterogeneous systems incorporating a plasma	252
6.2.1	Heterogeneous systems in the absence of an externally applied electric field	254
6.2.2	Heterogeneous systems in the presence of an applied electric field	256
6.3	Thermodynamics of heterogeneous reactions involving a plasma	258
6.3.1	Definitions of thermodynamic quantities and related terms	258
6.3.2	Thermochemistry of metallurgical processes	262
6.3.2.1	Heat capacities	262
6.3.2.2	Heats of reaction	264
6.3.2.3	Reaction heats of conventional and of plasma systems	265
6.3.2.4	Reaction heats of plasma systems exposed to an applied electric field	270
6.3.2.5	Temperature dependence of reaction heats in plasma metallurgy processes	273
6.3.3	Entropy of systems	274
6.3.3.1	Entropy changes during conventional and plasma metallurgical reactions	276

6.3.3.2	Entropy changes during plasma reactions in the presence of an applied electric field	280
6.3.3.3	Temperature dependence of the entropy of systems	282
6.3.4	Gibbs energy (free enthalpy) of systems	283
6.3.4.1	Changes in Gibbs energy during metallurgical reactions	284
6.3.4.2	Changes in the standard Gibbs energy during conventional and plasma metallurgical reactions	285
6.3.4.3	Temperature dependence of changes in the Gibbs energy	288
6.3.5	Chemical affinity	289
6.3.6	Chemical equilibria in metallurgical reactions.	289
6.3.6.1	The principle of action and reaction	294
6.3.7	Temperature dependences of equilibrium constants	295
6.3.8	Thermal decomposition of compounds	297
6.4	Fundamentals of the kinetics of metallurgical reactions.	298
6.4.1	Kinetics of homogeneous metallurgical reactions	299
6.4.1.1	Temperature dependences of reaction rates	301
6.4.1.2	The collision theory of reaction rates	302
6.4.1.3	The theory of activated complexes	305
6.4.2	Kinetics of heterogeneous metallurgical reactions	307
6.4.2.1	Reactions in the kinetic, diffusion and transition domains.	308
6.5	Absorption and release of gases by molten metals in plasma processing	310
6.5.1	Reactions involving the absorption or release of gases	310
6.5.2	Gas absorption and liberation mechanisms	312
6.5.3	Energy balances of the absorption of gases in various states	317
6.5.4	Energy balances of the liberation of gases from molten metal	320
6.5.5	Effects of an electric field on the absorption of gases	320

7.	PRINCIPLES AND TECHNIQUES OF PLASMA METALLURGY	327
7.1	Potential fields of application	327
7.2	Thermodynamic and kinetic fundamentals of plasma metallurgy	333
7.3	Plasma processing of metal-bearing raw materials	337
7.3.1	Distillation and sublimation processes	341
7.3.2	Thermal decomposition processes.	342
7.3.2.1	Production of zirconium dioxide from zircon sands	343
7.3.2.2	Thermal dissociation of uranium hexafluoride	347
7.3.3	Halogenation processes	351
7.3.4	Carbothermal reduction processes	353
7.3.4.1	Plasma augmentation of carbothermal reduction processes	355
7.3.4.2	The Plasmared, Plasmasmelt and Plasmazink processes	357

7.3.5	Reduction of oxides by a hydrogen plasma	365
7.3.6	Reduction of halides by a hydrogen plasma.	369
7.3.6.1	Reduction of uranium from uranium hexafluoride	371
7.3.6.2	Production of metal powders by the reduction of halides	373
7.4	Plasma steelmaking and steel remelting techniques	376
7.4.1	Hearth-type plasma smelting furnaces	377
7.4.2	Plasma-augmented induction smelting furnaces	384
7.4.3	Composition of steels and alloys produced in hearth-type plasma furnaces.	385
7.4.4	Desulphurization and dephosphorization in hearth-type plasma furnaces.	387
7.4.5	Evaporable of undesirable metals	391
7.4.6	Plasma remelting furnaces with vertical crystallizers	395
7.4.6.1	Refining effect of remelting in plasma furnaces with vertical crystal- lizers	401
7.4.6.2	Removal of inclusions in plasma remelting units with vertical crystal- lizers	409
7.4.7	Prospects for plasma technology in secondary steelmaking operations	413
7.4.8	Prospects for plasma technology in primary steelmaking operations .	417
7.4.9	Nitrogen alloying of steel	425
7.5	Plasma processing of non-ferrous metals and alloys	430
7.5.1	Plasma remelting of copper	431
7.5.2	Refining of reactive and remelting of non-ferrous metals	432
7.5.3	Effects of plasma remelting on the magnetic properties of permalloy- type materials	436
7.5.4	Production of high-purity metals and of alloys with closely defined analyses.	445
7.5.4.1	Effects of plasma remelting on noble metals and alloys	449
7.5.4.2	Refining and production of structural materials for high-temperature service	452
7.6	The outlook for the future of plasma metallurgy.	458
