

## Contents

<i>Part 1</i> INTRODUCTION TO THE PHYSICS OF HIGH PRESSURE PLASMA	9
1.1 Properties of Plasma in Thermodynamic Equilibrium (B. GRYCZ)	11
1.1.1 Plasma and Thermodynamic Equilibrium	11
1.1.2 Thermodynamic Description of the Ideal Gas	16
1.1.3 Dissociation Equilibrium	25
1.1.4 Ionization Equilibrium	31
1.1.5 Dissociation and Ionization Equilibrium in Gas Mixtures	38
1.2 Non-Equilibrium Processes in Plasma (B. GRYCZ)	47
1.2.1 Deviations from Thermodynamic Equilibrium	47
1.2.2 Fundamentals of the Kinetic Theory of Transport Phenomena	53
1.2.3 Fundamental Concepts of the Phenomenological Thermodynamics of Irreversible Processes	64
1.2.4 Conduction of Electricity in a Plasma	73
1.2.5 Diffusion and Ambipolar Diffusion	81
1.2.6 Viscosity	89
1.2.7 Heat Conduction	91
1.2.8 Relaxation and Recombination	97
1.3 Fundamentals of Plasma Dynamics (B. GRYCZ)	102
1.3.1 The Subject of Plasma Dynamics	102
1.3.2 The Equations of Electromagnetism	104
1.3.3 Equations of Gas Dynamics	113
1.3.4 Fundamentals of Magnetohydrodynamics	120
1.3.5 Fundamentals of Similarity Theory in Plasma Physics and Magnetohydrodynamics	128
1.3.6 The Plasma-to-Solid Interface	134

1.4 Radiation of Plasma (B. GROSS)	138
1.4.1 Intensity of Spectral Lines Emitted by Plasma	138
1.4.2 The Intensity of Continuous Radiation Emitted by Plasma	148
1.4.3 Self-Inversion of Lines Radiated from a Plasma	155
1.4.4 Broadening of Lines Emitted from Plasma	157
1.4.5 Radiation of a Non-Homogeneous Plasma Layer	164
1.5 Plasma Diagnostics (B. GROSS)	167
1.5.1 Calculating the Plasma Temperature of a Water-Stabilized Electric Arc	167
1.5.2 Computing the Composition of the Plasma in a Water-Stabilized Arc	171
1.5.3 Computing the Composition of the Plasma in an Arc Freely Burning in the Air	176
1.5.4 Calculating the Thermal Conductivity of the Plasma in an Arc Freely Burning in the Air	178
1.5.5 Calculating the Electric Conductivity of the Plasma in a Water-Stabilized Arc	184
1.5.6 Measuring Plasma Temperatures	191
1.5.7 Measuring Electron Density	204
References (Part 1)	208
<b>Part 2 TECHNICAL SOURCES OF PLASMA (K. MIKLÓSSY)</b>	<b>213</b>
2.1 Historical Introduction	215
2.1.1 Chemical Reactions	215
2.1.2 Solar Furnaces	217
2.1.3 High Temperatures Obtained by Resistance Heating	221
2.1.4 High-Frequency Heating	221
2.1.5 The Electric Arc	221
2.1.6 Short-Lived Processes	231
2.2 Physical and Technical Principles of Plasma Torches	232
2.2.1 Historical Development of the Stabilized Arc	232
2.2.2 The Electric Arc	237
2.2.3 Parts of the Arc	244
2.2.4 The Cathode	245
2.2.5 The Anode	248
2.2.6 The Arc Column (Thermal Plasma)	250
2.2.7 The Stabilized Arc	256
2.2.8 High-Frequency Plasma Generators	260
2.2.9 Radial Temperature Distribution of Plasma and Its Relation to Thermal Conductivity	263

2.2.10 Static Characteristic and Electric-Field Gradient in the Stabilized-Arc Column	268
2.2.11 Efficiency of Plasma Torches in Converting Electrical into Thermal Energy	270
2.2.12 Igniting the Arc	272
2.3 Design Principles and Construction of Czechoslovak Plasma Torches	275
2.3.1 Introduction	275
2.3.2 General Design Principles for Plasma Torches	275
2.3.3 Design Principles for Plasma-Torch Components	282
2.3.4 Designs of Plasma Torches	294
2.3.5 Current Sources and their Characteristics	301
2.4 Foreign Designs of Plasma Torches	304
2.4.1 Plasma Torches Manufactured in the USA	304
2.4.2 Plasma Torches Made in the USSR	317
2.4.3 The State of Development Work in the GDR	319
2.4.4 Development Work in Poland	323
References (Part 2)	325
<b>Part 3 TECHNICAL APPLICATION OF PLASMA</b>	<b>329</b>
3.1 Metal Cutting with Plasma Torches (K. MIKLÓSSY)	331
3.1.1 Introduction	331
3.1.2 Metal Cutting with Stabilized-Arc Plasma	333
3.1.3 Heat Balance of Metal Cutting with Plasma	341
3.1.4 Technology of Metal Cutting by Means of Plasma Torches	345
3.1.5 Economic Comparison of Various Cutting Methods	361
3.1.6 Safety Precautions	363
3.2 Plasma Torches Used for Surfacing (K. MIKLÓSSY)	365
3.2.1 Introduction	365
3.2.2 Applying Protective Coatings by Plasma Torches	365
3.2.3 Spray-Coating with Plasma—Technique and Equipment	369
3.2.4 Factors Affecting the Quality of Spraying	372
3.2.5 Spray-Coating Materials and their Properties	380
3.2.6 Hard Facing with Metals by Plasma Torches	386
3.3 The Plasmodynamic Conversion of Heat into Electrical Energy (Z. CHALUPA)	392
3.3.1 Introduction	392
3.3.2 Electroplasmodynamic Generators	394

3.3.3 Simplified Description of the Magnetohydrodynamic Conversion of Energy	397
3.3.4 The System of Magnetohydrodynamic Equations	403
3.3.5 Electric Conductivity of Partly Ionized Plasma	411
3.3.6 Anisotropy of Electric Conductivity in the Plasma	420
3.3.7 Configuration of Magnetoplasmadynamic Generators	425
3.3.8 A.C. Magnetoplasmodynamic Generators	428
3.3.9 Using Magnetoplasmodynamic Generators in Power Plants	433
3.4 High Temperature Chemical Synthesis in the Gaseous Phase (A. FIEDLER)	439
3.4.1 Introduction	439
3.4.2 Contemporary Problems of High-Temperature Synthesis	441
3.4.3 Direct Synthesis of Nitric Oxide	444
3.4.4 Production of Acetylene by Cracking of Saturated Hydrocarbons in the Electric Arc	449
3.4.5 Direct Synthesis of Organo-Silicon Compounds	457
3.4.6 Plasma Torches	460
3.5 Prospects of Plasma in Technical Applications (K. MIKLÓSSY)	464
References (Part 3)	472
