<b>Preface</b>	ix
<b>Physical constants</b>	xi
<b>Units</b>	xi
<b>Conversion factors</b>	xi
<b>1. Introduction</b>	1
<b>2. The Basic Theory of the Electrical Conductivity of Gases</b>	5
2.1 Introduction	5
2.2 Thermal Ionization	5
2.3 The Saha Equation	10
2.3.1 Statistical Weights	12
2.3.2 Other Forms of the Saha Equation	13
2.4 Electron Density of Seed Gas Mixtures	14
2.5 Motion of Charged Particles in Magnetic and Electric Fields	20
2.6 Electrical Conductivity of Gases	23
2.7 Non-Equilibrium Ionization and Conductivity	32
2.7.1 Deionization or Recombination	37
2.8 Electrical Conductivity from the Thermionic Emission of Dust Particles	38
<i>References</i>	42
<b>3. Electrodynamics</b>	44
3.1 Simplified Electrodynamics of MHD Generators	44
3.2 The Hall Effect	45
3.2.1 The Hall Effect of Electrons	45
3.2.2 Hall Effect of Ions (Ion Slip)	50
3.3 Electrodynamics of MHD Generators	51
3.4 Basic MHD Generator Configurations	53
3.4.1 Continuous Electrode Faraday Generator	54
3.4.2 Segmented Electrode Faraday Generator	56
3.4.3 The Hall Generator	57
3.4.4 The Series or Cross-Connected Generator	58
3.4.5 Summary of the Applications of the Four Generator Configurations	60
<i>References</i>	63

vi	CONTENTS	
<b>4. MHD Duct Geometry</b>		64
4.1 Introduction		64
4.2 Derivation of the Magnetohydrodynamic Equations		64
4.2.1 Fluid Dynamic Equations		64
4.2.2 The Continuity Equation		65
4.2.3 Equation of Motion (Momentum of Force Equation)		66
4.2.4 Equation of Energy (Power Equation)		69
4.2.5 Electrodynamical Equations		70
4.2.6 Modified Ohm's Law		70
4.2.7 Maxwells Equations		70
4.2.8 Equation of State		70
4.2.9 Summary of Equations		70
4.3 Magnetohydrodynamic Approximations		72
4.4 Similarity Criteria		72
4.5 Quasi One-Dimensional MHD Equations		74
4.6 Steady-State Compressible Flow in Faraday-Type MHD Generators		75
4.6.1 Constant-Velocity MHD Generator		75
4.6.2 Other Types of MHD Generator		79
4.6.3 Constant-Area MHD Generator		79
4.6.4 Constant-Temperature MHD Generator		79
4.6.5 Constant Mach Number MHD Generator		80
4.6.6 Constant Pressure and Density MHD Generator		80
4.6.7 Summary of Steady-State Compressible Flow in Faraday-Type MHD Generators		81
4.7 MHD Generating Duct Optimization		81
References		85
<b>5. MHD Power Generation Cycles</b>		86
5.1 Short-Duration MHD Generators		86
5.2 Central Power Station MHD-Steam Generator Cycles		86
5.2.1 Fossil-fuel Fired		86
5.2.2 Nuclear MHD Power Generation (Gaseous System)		86
5.3 Liquid Metal MHD Generators		100
5.3.1 The Two-component Two-phase (Elliot) Cycle		101
5.3.2 The Two-phase One- or Two-component (Prem) Cycle		103
5.3.3 The Two-phase One-component (Petrick and Lee) Cycle		103
5.3.4 The Condensing-injector (Jackson and Brown) Cycle		103
5.3.5 The Condensing-injector (Staustrahlrohr) Cycle		104
5.3.6 Liquid Metal MHD Generators		105

	CONTENTS	vii
5.3.7 Conclusions		106
5.4 MHD Generator Conversion Efficiency		107
References		109
<b>6. Open-cycle MHD Power Generator Plant Components</b>		110
6.1 Introduction		110
6.2 High-temperature Air Heater		110
6.2.1 Recuperator Theory		110
6.2.2 Regenerator Theory		112
6.2.3 Selection of Air Heater for MHD Plant		114
6.2.4 Direct Air Heaters		116
(i) Stationary Matrix Regenerator		116
(ii) Liquid Slag Regenerator		116
6.2.5 Indirect Air Heaters		122
Ceramic Recuperator		122
6.2.6 Chemical Recuperation of Heat		122
6.3 Combustion Chamber		124
6.4 MHD Generating Duct		128
6.4.1 Electrodes		129
6.4.2 Interelectrode Insulation		134
6.4.3 Insulating Walls		134
6.4.4 Hall and Series Cross-connected Ducts		136
6.5 The Magnet		137
6.5.1 Origin of the Resistivity of Materials		137
(i) Resistance due to Electron Scattering		137
(ii) Magnetoresistance		139
6.5.2 Water-cooled Magnets		139
6.5.3 Cryogenic Magnets		139
6.5.4 Superconductivity		140
6.5.5 Protection		143
6.5.6 The AVCO Superconducting Magnet		144
6.6 Seed Recovery		145
6.7 A.C. Generation		151
6.8 MHD Generating Duct Losses		153
References		154
