

## Contents

*List of Contributors*  
*Preface*

vii  
ix

### **1 High Resolution Lithography**

GEORGE R. BREWER

I. Introduction	2
II. The Need for an Improved Lithography	3
III. Electron-Beam Lithography	11
IV. Technical Benefits of High Resolution Lithography	18
V. Limitations on Electron-Beam Lithography	24
VI. Economic Factors	42
VII. Status and Future of the Technology	51
VIII. The Contents of This Book	55
References	56

### **2 Electron-Beam Processes**

JAMES S. GREENEICH

I. Introduction	60
II. Electron Scattering in Solids	61
III. Resist Images	79
IV. Electron-Resist Characteristics	93
V. Processing with Electron Resists	108
VI. Electron-Beam Alignment	127
VII. Summary	136
References	137

**3 Electron-Beam Lithography Machines**

DONALD R. HERRIOTT AND GEORGE R. BREWER

I. General Description	142
II. The Electron-Optical Column	144
III. Machine Design and Operating Strategies	173
IV. State-of-the-Art Machine Characteristics	196
References	213

**4 Device Fabrication by Electron-Beam Lithography**

RICHARD C. HENDERSON

I. Background	217
II. Comparison of Photo- and Electron-Beam Lithography	219
III. Characteristics of Electron-Beam Lithography	223
IV. Electron Devices Made with Electron-Beam Lithography	236
V. Processing Constraints on Electron-Beam Lithography	250
VI. Summary	254
References	255

**5 Mask Fabrication by Electron-Beam Lithography**

J. P. BALLANTYNE

I. Introduction	260
II. Mask Fabrication Requirements	262
III. Mask Fabrication Methods	269
IV. Choice of Materials	277
V. Processing	284
VI. Performance	295
VII. Outlook	303
References	305

**6 Replication Techniques**

JACQUES TROTEL AND BERNARD FAY

I. Introduction	309
II. Physics of Replication Systems	312
III. Description of Replication Systems	318
IV. Comparison among the Several Replication Methods	352
References	354
