

Contents

v Preface

Chapter 1: Ion sources

- 1–11 Gas and vapour ion sources for low-energy accelerators
INVITED *G Sidenius*
- 12–17 Molten metal field ion sources
R Clampitt and D K Jefferies
- 18–23 Self-accelerating microwave ion and plasma sources
G Mourier, P Boulanger, J Peyraud and J L Delcroix
- 24–28 Intense halogen negative ion source
J Pelletier and C Pomot
- 29–33 Plasma and beam characteristics of FEBIAD – a low-intensity, high-efficiency ion source
R Kirchner
- 34–39 A highly effective source of inert gas ions
T D Radjabov and A G Kadirov
- 40–43 Duoplasmatron sputter source for multiply charged ions of solids
R Keller and M Müller
- 44–49 A new target ion source system for investigation of short-lived nuclei
N Takahashi, T Matsuo, K Miseki and H Matsuda

Chapter 2: Accelerator equipment

- 50–62 Intense ion beams for implantation
INVITED *R G Wilson*
- 63–69 A new accelerator for multiply charged ions at low energy
J G Bannenberg, S Doorn and F W Saris
- 70–77 A high-current ion source for implantation applications
N Williams
- 78–83 Discharge characteristics and beam quality of a Freeman-type ion source in low-pressure arc operation: applications to ion beam deposition
K Miyake, K Yagi and T Tokuyama

- 84–89 Ion extraction system of the Kyoto beam–plasma type ion source
J Ishikawa, F Sano, H Tsuji and T Takagi
- 90–95 On the successful upgrading of a ‘Scandinavian’ low-output isotope separator to an energy of 300 kV
A Johansen, K Persson and L Sarholt-Kristensen
- 96–102 Preparation of sputter electrodes for multiply charged heavy-ion sources
K Leible and B H Wolf
- 103–108 Adaptation of an alkali metal ion source on a low-energy VdG-type electrostatic accelerator
M Lambert, J P Thomas and J P Buchet
- 109–116 Energy resolution, stability and calibration of a 400 kV implantation-type accelerator studied using (p, γ) nuclear reactions
M Croset, D Dieumegard, A Grouillet and G Amsel

✓ Chapter 3: Ion beam detection and applications

- 117–124 Calorimetric measurements of the neutral beam present in a 500 keV ion implanter
P L F Hemment
- 125–130 Remote ion beam position measurement from random beam modulation
M S Hodgart, A Andrews and R W Haining
- 131–135 A new technique for rapid analysis of light-ion track fields
L Faïman
- 136–141 Low-energy, mass-analysed ion beam deposition
K Yagi, K Miyake and T Tokuyama
- 142–150 Film formation by ionised-cluster beam deposition
T Takagi, I Yamada and A Sasaki
- 151–155 *In situ* ion etching in a scanning electron microscope and its application to the study of dental restorations
R S Dhariwal, P C Ball, E A Marsland and R K Fitch

Chapter 4: Excitation, ionisation and charge transfer

- 156–168 Excited state populations of beams: preparation, measurement and control
INVITED *H B Gilbody*
- 169–174 Highly charged ions: production and charge exchange
A Müller and E Salzborn

- 175–184 Charge transfer cross sections in high-flux, low-energy accelerators
K Leyland, D G Armour, G Carter and J H Freeman
- 185–189 An apparatus for the investigation of the interaction between ion beams and gases
M Becker, M Heilgeist and G K Wolf
- 190–200 Colliding-beam studies of atomic collision processes
 INVITED *M F A Harrison*

Chapter 5: Ion beam transport

- 201–211 The role of space charge in beam transport
 INVITED *J E Osher*
- 212–221 The ion beam as a drifting gas
J D Lawson
- 222–227 Space-charge neutralisation of ion beams
A J T Holmes
- 228 Ion beam propagation across magnetic fields
J T Crow, A T Forrester and D M Goebel
- 229–235 Properties of an ionised-cluster beam from a vaporised-cluster ion source
T Takagi, I Yamada and A Sasaki
- 236–242 Development of energetic neutral beams to the megawatt power level for controlled thermonuclear research
E Thompson
- 243–248 Transport of intense low-energy ion beams
 INVITED *P H Rose and D F Downey*

Chapter 6: Ion optics

- 249–256 Electrostatic lenses
 INVITED *F H Read*
- 257 A low-energy, high-perveance, quiescent ion source
A T Forrester, J T Crow and D M Goebel
- 258–264 Ion optics of the inhomogeneous-field Wien filter: theory and experiment
D Ioanoviciu and C Cuna
- 265 Large, dense and uniform plasma for multi-ampère beam formation: the multiDUOPIGatron
C Lejeune, J P Grandchamp and J Aubert

- 266–281 Ion optics for surface analysis
INVITED *H Liebl*
- 282–286 Beam emittance of the duoplasmatron as a function of the discharge modes
J Aubert, C Lejeune and P Tremelat

Chapter 7: Scattering of ion beams by surfaces

- 287–297 Scattering of ion beams from surfaces
INVITED *W Heiland and E Taglauer*
- 298–304 A 2–100 keV, UHV ion impact spectrometer for ion–solid interaction studies
J A Van den Berg, D G Armour and L K Verheij
- 305–312 An accelerator system for producing two-component beams for studies of interactive surface effects
M Kaminsky, S K Das, R Ekern and D C Hess
- 313–320 Surface analysis using the double-scattering effect
E S Mashkova and V A Molchanov
- 321 Author Index
