

# Contents

v Preface

## Chapter 1: Optics and beam transport

- 1–12 Beam transport for ion implantation  
INVITED *J G Bannenberg*
- 13–19 Transport of multiple beams  
*G A Cottrell and A J T Holmes*
- 20–25 Low-energy ion beam transport by permanent magnets  
*K N Leung, K W Ehlers and E B Hooper Jr*

## Chapter 2: Recent developments in heavy-ion accelerators

- 26–35 Design criteria for ion implantation equipment for surface treatment  
INVITED *G Dearnaley and P D Goode*
- 36–41 High-current ion implanter for industrial use  
*N Sakudo, K Tokiguchi, H Koike and I Kanomata*
- 42–47 A 200 kV heavy-ion accelerator for radiation damage research and its use for studies of radiation-enhanced diffusion and segregation  
*A D Marwick, R C Piller and J E Hobbs*
- 48–53 A 400 kV proton beam facility for the study of silicon semiconductor detector surfaces and of the stopping power of biological materials  
*A K M M Haque, D G Hasko, H Nikjoo, D Hossain and A Mohammadi*
- 54–59 The RF quadrupole linac: a new low-energy accelerator  
*R W Hamm, K R Crandall, C W Fuller, L D Hansborough, R A Jameson, E A Knapp, M D Machalek, J M Potter, G W Rodenz, R H Stokes, J E Stovall, D A Swenson, T P Wangler and S W Williams*
- 60–65 Advances and limitations of commercial ion-implantation equipment  
*H Glawischnig*
- 66–76 Recent developments in low-velocity linacs for HIF  
*R A Jameson*

## Chapter 3: Beam detection and measurement

- 77–90 Beam detection and dose measurement  
INVITED *P L F Hemment*

- 91–94 Thin silicon films for ion beam monitoring  
*R Badalec and H Runge*
- 95–99 Electrostatic scanning of a few mA ion beam: application to an ion implanter  
*J Camplan, J Chaumont and R Meunier*
- 100–105 A new dose control technique for ion implantation  
*G Ryding and M Farley*

**Chapter 4: Low-energy ion beam systems for surface studies**

- 106–117 Low-energy ion beam systems for surface analytical and structural studies  
INVITED *G C Nelson*
- 118 Scanning ion source for static SIMS and depth profiling  
*J Tümpner, O Ganschow and A Benninghoven*
- 119–123 The determination of surface structures by low-energy ion scattering  
*A J Algra, S B Luitjens, E P Th M Suurmeijer and A L Boers*
- 124–131 Quantitative analysis of III–V compounds, using low-energy ion-scattering spectrometry (ISS)  
*A Barcz, M Croset and L M Mercandalli*

**Chapter 5: High-current ion sources, neutral injection, charge transfer**

- 132–138 Species and impurity measurements in intense neutral beams in DITE tokamak  
*D Stork and S J Fielding*
- 139–142  $H^-$  and  $D^-$  production in plasmas  
*M Bacal, A M Bruneteau, W G Graham, G W Hamilton and M Nachman*
- 143–149 Low-energy  $D^+$  beam transport for the production of  $D^-$  by double electron capture  
*R Geller, C Jacquot, P Ludwig, P Sermet, H G Gustavson, R Pauli and J C Rocco*
- 150–157 Heavy-ion beams for inertial fusion  
INVITED *T F Godlove and W B Herrmannsfeldt*
- 158–162 Spark-resistant design for high-voltage high-current accelerating columns  
*J D Hepburn, M R Shubaly and J Ungrin*
- 163–170 Measurements of power loadings in four-electrode ion beam extraction systems  
*A J T Holmes and T S Green*
- 171–176 Production of  $H^-$  and  $D^-$  by backscattering from surfaces  
*P J Schneider, K H Berkner, W G Graham, R V Pyle and J W Stearns*
- 177–181 Charge transfer cross sections of argon ions colliding with argon atoms  
*J Aubert, S Bliman, N Chan-Tung, R Geller, B Jacquot and D van Houtte*

- 182–187 A model for  $H^-$  and  $D^-$  production by hydrogen backscattering  
*J R Hiskes and P J Schneider*

**Chapter 6: Physical and chemical effects on ion-bombarded surfaces including deposition and etching**

- 188–200 Ion-activated growth of special film phases  
INVITED *C Weissmantel, K Bewilogua, H-J Erler, H-J Hinneberg, S Klose, W Nowick and G Reisse*
- 201–207 Wear and oxidation studies in iron implanted with tin  
*I J R Baumvol, R E J Watkins, G Longworth and G Dearnaley*
- 208–213 Factors influencing the nucleation of silver on plastic  
*C A Bishop, R P Howson and M I Ridge*
- 214–219 The preparation and properties of reactively sputtered amorphous Si and III–V compounds  
*I P Thomas, M Hargreaves, D P Turner, M J Thompson and J Allison*
- 220–228 Glow discharge excitation and surface treatment in low-pressure plasmas  
INVITED *L Holland*
- 229–234 Preparation and optical properties of transparent carbon films prepared in various hydrocarbon atmosphere RF plasmas  
*P G Turner, R P Howson and C A Bishop*
- 235–240 A low-energy ion source for p-type doping in MBE  
*R M Park, C R Stanley and R Clampitt*
- 241–245 Pattern delineation by ion beam milling  
*R N Castellano*
- 246–251 The influence of redeposition on the evolution of surface shape during ion etching  
*S S Makh, R Smith and J M Walls*
- 252–261 Theory of redeposition of sputtered flux onto surface asperities  
*J Belson and I H Wilson*
- 262–270 The surface topography of germanium after bombardment with germanium ions  
*I H Wilson*

**Chapter 7: Recent developments in ion source technology**

- 271–283 High-brightness high-current ion sources  
*T S Green*
- 284–291 A direct extraction  $H^-$  ion source  
*P E Gear and R Sidlow*

- 292–296 Studies of field-emission gallium ion sources  
*A J Dixon and A von Engel*
- 297–303 Multiply charged ion beams of solids from sputter duopIGatrons  
*J-P Gilles and C Lejeune*
- 304–308 Electron cyclotron resonance source for heavy multiply charged ions  
*S Dousson, R Geller and B Jacquot*
- 309–315 Properties and discharge mechanisms of a saddle-field ion source  
*L Pomathiod, D Henry, Y Arnal and R Boswell*
- 316–321 Liquid metal field-emission sources and their applications  
*P D Prewett and D K Jefferies*
- 322–327 Improvement of multiply charged ion production for pulsed duoplasmatron  
or duopIGatron  
*C Lejeune and J-P Gilles*
- 328–332 A proton source for the high-intensity Lamb-shift-type polarised ion source  
*A Isoya and T Inoue*
- 333–338 A high-current DC heavy-ion source  
*M R Shubaly*
- 339–344 Experimental analysis of the correlation between the beam–plasma interface  
and the beam emittance of a duoplasmatron  
*J Aubert, C Lejeune and P Nugues*
- 345–351 Pressure dependence and stability of the extracted ion current in arc-  
discharge-type heavy-ion sources  
*E Pasztor*
- 353 Author Index
