

CONTENTS

Introduction	xi
J.P. Thomas	
PART I	
ION BEAMS: PRODUCTION AND INTERACTION WITH MATTER	
Energy Loss of Charged Particles	3
W.K. Chu	
Some General Considerations of Ion Beam	
Production and Manipulation	35
J.H. Freeman	
PART II	
SURFACE STUDIES: keV RANGE IONS	
Applications of Low-Energy Ion Scattering	65
H.H. Brongersma, L.C.M. Beirens, and	
G.C.J. van der Ligt	
Ion Beam Induced Light Emission: Mechanisms	
and Analytical Applications	81
W.F. van der Weg	
Complementary Analysis Techniques: AES, ESCA	101
J. Tousset	
PART III	
IN-DEPTH ANALYSIS	
Fundamental Aspects of Ion Microanalysis	143
G. Blaise	

Ion Induced X-rays: General Description	239
F. Folkmann	
The Evolving Use of Electrons, Protons and Heavy Ions in the Characterisation of Materials	283
J.A. Cairns	
Backscattering of Ions With Intermediate Energies	303
H. Verbeek	
Backscattering Analysis With MeV ^4He Ions	333
J.W. Mayer, M-A. Nicolet, and W.K. Chu	
Microanalysis by Direct Observation of Nuclear Reactions	367
A. Cachard, J.P. Thomas, and E. Ligeon	
PART IV	
SOLID STATE STUDIES USING CHANNELING EFFECTS	
Channeling: General Description	405
J.A. Davies	
Flux Peaking - Lattice Location	429
P. Mazzoldi	
Analysis of Defects by Channeling	455
E. Rimini	
Application of MeV Ion Channeling to Surface Studies	483
J.A. Davies	
GENERAL CONCLUSIONS	
General Conclusions	499
Participants	505
Index	513
