

CONTENTS

Editors' Introduction	ix
Preface	xi
Dedication	xv
Credits	xvii
1 THE ROLE OF RECIRCULATION IN ELECTRON ACCELERATION	1
1.1 Introduction	1
1.2 Nuclear and High Energy Physics Applications of Recirculating Electron Accelerators	5
1.2.1 The need for high duty factor	5
1.2.2 Some typical recirculating accelerator projects	6
1.2.3 Synchrotron and storage ring injectors	10
1.3 Medical Applications of Recirculating Electron Accelerators	11
1.3.1 Radiation therapy	11
1.3.2 Radio-nuclide production	14
2 THE CONVENTIONAL MICROTRON	15
2.1 Basic Principles	15
2.2 Injection and Beam Dynamics	17
2.3 Microwave Systems	19
2.4 Limitations of the Microtron	20
3 LINEAR ACCELERATORS AND RECIRCULATION	23
3.1 General Considerations	23
3.2 Properties of Linear Accelerators	24

3.3	Economics of Recirculation	33
3.4	Problems of Low and Medium Duty Factor Recirculation	36
3.5	Problems of High Duty Factor Recirculation	38
3.6	Beam Breakup	40
3.7	Superconducting Linacs	42
3.7.1	Motivation	42
3.7.2	Practical details	43
3.7.3	Performance of superconducting structures	45
3.7.4	Limitations	47
3.7.5	Performance of a superconducting linac	51
3.8	High Duty Factor Room Temperature Linacs	52
3.8.1	Introduction	52
3.8.2	Disk and washer structure	53
3.8.3	Biperiodic slot coupled structure	54
3.8.4	Side coupled structure	55
4	RACE-TRACK MICROTRONS	57
4.1	Basic Configurations	57
4.2	Design of the Standard Race-Track Microtron	58
4.3	The Bicyclotron and the Hexatron	61
4.4	Reflex Geometries	64
4.5	Injection and Extraction	66
4.6	First Orbit Geometries	70
4.7	Miscellaneous and Curious Designs	72
5	SOME REPRESENTATIVE RACE-TRACK MICROTRON PROJECTS	75
5.1	University of Western Ontario	75
5.2	University of Illinois	77
5.2.1	History	77
5.2.2	MUSL-1	78
5.2.3	MUSL-2	81
5.3	University of Mainz	82
5.3.1	The MAMI project	82
5.3.2	MAMI-A	83
5.4	University of Wisconsin	88
5.5	National Bureau of Standards/Los Alamos National Laboratory	91

6	INDEPENDENT ORBIT RECIRCULATION	95
6.1	Motivation and Basic Principles	95
6.2	The Stanford University-High Energy Physics Laboratory Superconducting Recyclotron	96
6.2.1	Configuration and economics	96
6.2.2	Basic design equations	97
6.2.3	Practical details	100
6.3	The Wuppertal/Darmstadt Rezyklotron	105
6.4	The Massachusetts Institute of Technology-Bates Recirculator	107
7	BEAM DYNAMICS I: PHASE STABILITY AND ENERGY RESOLUTION	111
7.1	Phase Space and Transfer Matrix	111
7.2	General Stability Conditions	114
7.3	Phase Motion	116
7.3.1	The race-track microtron	116
7.3.2	Polytrons	121
7.3.3	The recyclotron	122
7.4	Second Order Effects and Energy Resolution	125
7.5	Limits to Phase Stability – Non-linear Phase Oscillations	129
7.6	Synchrotron Radiation	138
8	BEAM DYNAMICS II: TRANSVERSE MOTION	141
8.1	Transverse Stability Condition	141
8.2	Beam Optics	142
8.2.1	The race-track microtron	142
8.2.2	The bicyclotron and hexatron	148
8.2.3	The recyclotron	153
8.3	Focusing in the Linac	159
9	BEAM DYNAMICS III: BEAM BREAKUP	161
9.1	Mechanisms of Beam Breakup	161
9.1.1	Regenerative beam breakup	161
9.1.2	Cumulative beam breakup	162
9.2	Transverse Modes of Accelerating Structures	163
9.3	Theories of Recirculative Regenerative Beam Breakup	166
9.3.1	Travelling wave model	166

9.3.2	“Short cavity” model	169
9.3.3	Standing wave model	170
9.4	Confirmation of the Standing Wave Theory	172
9.4.1	Recirculated beam measurements	172
9.4.2	Accelerating structure measurements	173
9.4.3	Results	174
9.5	Extension of Beam Breakup Theories to Multiple Orbits	176
9.6	Suppression of Recirculative Regenerative Beam Breakup	177
9.6.1	Accelerating structure design	177
9.6.2	Active feedback	180
9.6.3	Recirculation geometry	181
9.6.4	Head-to-tail recirculation	181
9.6.5	Beam optics design	182
9.7	Estimation of Beam Breakup Characteristics for Various Accelerator Designs	183
9.8	Approximate Formulae for Beam Breakup Starting Currents	188
10	DESIGN STUDIES FOR CW ELECTRON ACCELERATORS FOR NUCLEAR PHYSICS	191
10.1	Nuclear Physics Requirements	191
10.2	Storage Ring Pulse Stretchers	192
10.3	Proposals for Accelerators with Maximum Energy up to 1 GeV	194
10.3.1	University of Illinois cascaded race-track microtron	194
10.3.2	National Bureau of Standards cascaded race-track microtron	198
10.4	Proposals for Multi-GeV Accelerators	201
10.4.1	Massachusetts Institute of Technology–Bates Laboratory long range expansion program	201
10.4.2	Southeastern Universities Research Association 4 GeV pulse stretcher	202
10.4.3	Argonne National Laboratory GeV microtron project	204
Appendix A.	List of Institutes	211
Appendix B.	Recirculating Electron Accelerator and Pulse Stretcher Projects and Proposals	215
Appendix C.	Accelerator Conferences	223
