Editor's Introduction	xiii
Preface	xv
<u>Chapter 1</u>	
<u>ACCELERATORS AS PARTICLE AND RADIATION GENERATORS</u>	1
1.1 INTRODUCTION	1
1.1.1 Fundamental Definition of a Charged-particle Accelerator	1
1.1.2 Energy Range. History and Prevalence	1
1.1.3 Kinds of Particles Accelerated. Mass Ranges	5
1.1.4 Particle Acceleration in an Electric Field	11
1.1.5 Particles in a Magnetic Field	21
1.2 HIGH-VOLTAGE LINEAR ACCELERATORS	28
1.2.1 High-voltage Process Accelerators	30
1.2.1.1 Classification. Fundamental Parameters	30
1.2.1.2 Low-energy Accelerators	36
1.2.1.3 Medium-energy Transformer Accelerators	52
1.2.1.4 Dynamitrons	59
1.2.1.5 Cascade Accelerators (Cockroft-Walton Accelerators)	65
1.2.2 Van de Graaff Electrostatic Accelerators	70
1.2.3 High-power Pulsed Accelerators	80
1.2.3.1 General Requirements. Classification	80
1.2.3.2 Marx Accelerators	82
1.3 RADIO-FREQUENCY LINEAR ACCELERATORS	90
1.3.1 Electron rf Linear Accelerators	90
1.3.1.1 Basic Circuit of the Accelerator	90
1.3.1.2 Beam Structure. Choice of Parameters	93
1.3.1.3 Radio-frequency Utility Accelerators	96
1.3.1.4 Radio-frequency Accelerators for Research	102
1.3.2 Ion rf Linear Accelerators	106
1.4 CYCLOTRONS	111
1.4.1 Conventional Cyclotrons	111
1.4.2 Isochronous Cyclotrons	113

1.4.3	Synchrocyclotrons	118
1.5	BETATRONS	119
1.6	SYNCHROTRONS AND STORAGE RINGS	120
1.7	MICROTRONS	128
1.8	BREMSSTRAHLUNG RADIATION GENERATORS	129
1.8.1	Physical Fundamentals	129
1.8.2	Radiographic Accelerators	133
1.8.3	X-ray Generators for Radiation Processing	141
1.9	SYNCHROTRON RADIATION GENERATORS	146
1.9.1	Physical Fundamentals	146
1.9.2	Ancillary Magnets: Wigglers and Undulators	152
1.9.3	Generation of Synchrotron Radiation Sources	154
1.9.4	Construction of SR Sources	156
1.10	SUBMILLIMETRE RADIATION GENERATORS	160
1.11	NEUTRON GENERATORS	161
1.11.1	Classification. Physical Fundamentals	161
1.11.2	Neutron Tubes	169
1.11.3	Laboratory Neutron Generators	173
1.11.4	Spallation Neutron Generators	177
1.12	ION IMPLANTERS	184
1.12.1	Parameters and Fundamental Systems of Implanters	184
<u>Chapter 2</u>		
	<u>ACCELERATOR FACILITIES</u>	199
2.1	INTRODUCTION	199
2.2	RESEARCH FACILITIES	200
2.3	INDUSTRIAL FACILITIES	202
2.3.1	Facility Design	202
2.3.2	Product Handling Equipment	206
2.3.3	Dosimeters for High-dose Measurements	212
2.3.4	Control and Safety Systems	220
2.4	COMMERCIAL FACILITIES	224
2.5	RADIOLOGICAL PROTECTION	229
2.6	ECONOMICAL ASPECTS	234
<u>Chapter 3</u>		
	<u>FUNDAMENTALS OF ACCELERATOR TECHNIQUES</u>	239
3.1	RANGE AND GROWTH OF APPLICATIONS	239

3.2 RADIATION INTERACTIONS	241
3.2.1 High-energy Radiation	241
3.2.2 Fundamental Radiation Induced Reactions	244
3.2.3 Polymerization and Graft Copolymerization	247
3.2.4 Crosslinking and Degradation (Scission)	251
3.2.5 Radiation Dose Range. Dose Rate	253
3.2.6 Throughput Rate and Radiation Yield	256
3.3 PLANNING OF ELECTRON-BEAM PROCESSING	258
3.3.1 Electron Effective Penetration	258
3.3.2 Area Throughput Rate	266
3.3.3 Mass Throughput Rate	270
3.3.4 Processing Line Speeds	276
3.4 PLANNING OF BREMSSTRAHLUNG PROCESSING	279
3.5 QUALITY CONTROL IN RADIATION PROCESSES	283
3.6 SOME LEGAL ASPECTS	285

Chapter 4

<u>RADIOCHEMICAL ACCELERATOR TECHNIQUES</u>	288
4.1 RADIATION POLYMERIZATION	288
4.1.1 Bulk Polymerization	288
4.1.2 Polymerization of Biomedical Materials	289
4.1.3 Post-polymerization Processing	292
4.1.4 Graft Copolymerization	294
4.2 RADIATION CURING OF COATINGS	299
4.2.1 Basic Parameters and Range of Applications	299
4.2.2 Competitiveness of Electron Curing	301
4.2.3 Implementation of Curing Processes	302
4.3 RADIATION CROSSLINKING	313
4.3.1 Basic Parameters and Range of Applications	313
4.3.2 Crosslinking of Heat-shrinkable Materials	315
4.3.3 Production of Polyethylene Foam	318
4.3.4 Crosslinking of Wire and Cable Insulation	320
4.3.5 Future Techniques	329
4.3.6 Radiation Vulcanization	330
4.4 RADIATION DEGRADATION	332

4.5	PRODUCTION OF RADIOISOTOPES	333
4.5.1	Radionuclides in Medicine	333
4.5.2	Thin-layer Activation Techniques to Assess Wear	340
4.6	IDENTIFICATION OF NEW ELEMENTS	349

Chapter 5

	<u>RADIOMICROBIOLOGICAL ACCELERATOR TECHNIQUES</u>	355
5.1	MEDICAL STERILIZATION	355
5.1.1	History and Range of Applications	355
5.1.2	Microbiological Inactivation and Dose Range	358
5.1.3	Types of Sterilized Materials and Devices	363
5.1.4	Systems of Accelerator Sterilization	365
5.1.5	Economics of Sterilization	369
5.2	PRODUCTION OF ASEPTIC PACKAGING MATERIALS	374
5.3	RADIATION PRESERVATION OF FOOD	376
5.3.1	Methods of Food Irradiation	376
5.3.2	Present-day Situation and Future Trends	378
5.3.3	Prospects of Accelerator Use	381

Chapter 6

	<u>FUTURE RADIATION ACCELERATOR TECHNIQUES</u>	383
6.1	IMPLEMENTATION OF RADIATION ACCELERATOR TECHNIQUES	383
6.2	DISINFECTION OF DRINKING WATER	384
6.3	DISINFECTION OF WASTE WATER AND SEWAGE SLUDGE	386
6.3.1	Problems of Radiation Treatment of Waste Water and Sewage Sludge	386
6.3.2	Accelerator Systems for Sludge Disinfection	387
6.4	UTILIZATION OF SOLID WASTES	392
6.5	REMOVAL OF NOXIOUS POLLUTANTS FROM INDUSTRIAL EXHALATIONS	395

Chapter 7

	<u>MICROSTRUCTURE TECHNOLOGY USING ACCELERATORS</u>	399
7.1	MICROHOLES AND NUCLEAR TRACK FILTERS	399
7.1.1	Heavy Ion Track Etching	399
7.1.2	Nuclear Track Filters	403
7.2	HARD-ROCK TUNNELLING BY ELECTRON IRRADIATION	411

7.3 ACCELERATOR LITHOGRAPHY TECHNIQUES	414
7.3.1 Physical Fundamentals. Demand	414
7.3.2 Lithography with Synchrotron Radiation	419
7.3.3 Ion-beam Lithography	428
<u>Chapter 8</u>	
<u>ION IMPLANTATION</u>	433
8.1 RANGE OF APPLICATIONS AND CLASSIFICATION	433
8.2 PHYSICAL FUNDAMENTALS	435
8.3 IMPLANTATION INTO SEMICONDUCTOR DEVICES	440
8.3.1 Industrial Implantations	440
8.3.2 Types of Implanted Semiconductor Devices	446
8.4 IMPLANTATION IN INSULATORS	452
8.5 IMPLANTATION IN METALS	457
8.5.1 Implantation Techniques	457
8.5.2 Modification of Tribomechanical and Anticorrosion Properties	464
<u>Chapter 9</u>	
<u>ACCELERATOR RADIOGRAPHY AND MICROSCOPY</u>	469
9.1 ACCELERATOR RADIOGRAPHY	469
9.1.1 Bremsstrahlung Radiation Radiography	470
9.1.2 Neutron Radiography	494
9.2 ACCELERATOR MICROSCOPY	506
9.2.1 Electron Microscopy	506
9.2.2 Synchrotron Radiation Microscopy	516
9.2.3 Ion Microscopy	519
<u>Chapter 10</u>	
<u>ACCELERATOR TECHNIQUES IN MATERIALS STUDIES</u>	523
10.1 RESEARCH CAPABILITIES USING ACCELERATOR IONS	523
10.2 ACCELERATOR MICROBEAMS	525
10.3 METHODS OF ELASTIC ION SCATTERING	531
10.4 TECHNIQUE OF PARTICLE-INDUCED CHARACTERISTIC X-RAY EMISSION	541
10.5 NUCLEAR-REACTION TECHNIQUES	552
10.5.1 Fundamentals of Ionic Reactions	552
10.5.2 Examples of Nuclear-Reaction Uses	556

10.5.3 Photoactivation	559
10.5.4 Neutron Activation	560
10.6 ACCELERATOR MASS SPECTROMETRY	560
<u>Chapter 11</u>	
<u>ACCELERATORS IN THE POWER INDUSTRY</u>	565
11.1 ACCELERATOR CONVERSION OF NUCLEAR FUEL	566
11.1.1 World Energy Situation	566
11.1.2 Physical Fundamentals of Fuel Conversion	568
11.1.3 Conversion Systems	571
11.2 ACCELERATOR NUCLEAR FUSION	579
11.2.1 Physical Fundamentals of Accelerator Thermonuclear Fusion	579
11.2.2 Accelerator Fusion Systems	587
11.3 MATERIALS STUDIES IN NUCLEAR POWER INDUSTRY	593
11.3.1 Fundamental Problems	593
11.3.2 Basic Mechanisms of Radiation Damage	597
11.3.3 Irradiation with Accelerator Neutrons	601
11.3.4 Radiation Damage Simulation with Ion Beams	602
11.3.5 Determination of Hydrogen and Helium Content in Materials	615
REFERENCES	621
LIST OF FIRMS	638
INDEX	640
