1. Heavy-Ion Fusion Reactions

Ulrich Mosel

1. Introduction	3
2. Experimental Determinations and General Properties of Fusion Cross Sections	4
3. Entrance Channel Effects	10
3.1. Phenomenological Analyses of Fusion Cross Sections	10
3.2. Trajectory Calculations	12
3.3. Fusion Cross Sections at Low Energies	14
3.4. Fusion Cross Sections at High Energies, Critical Distance Models	16
4. Limitations of Fusion Cross Sections by the Yrast Line	19
4.1. Phenomenological Analyses	19
4.2. Determination of the CN Yrast Line	21
4.3. Statistical Yrast Line Effects	23
5. TDHF Descriptions of Fusion	26
6. Effects of Deformation on Fusion Cross Sections	29
6.1. Dynamic Deformations, Fusion of Heavy Nuclei	29
6.2. Static Deformations	36
7. Resonances in Fusion Cross Sections	41
8. Conclusions and Outlook	44
Acknowledgments	45
References	46

2. Heavy-Ion Radiative Capture

Andrew M. Sandorfi

1. Introduction	53
1.1. Historical Perspective	53
1.2. General Considerations	57
2. High-Energy Gamma Decays to Bound States	59
2.1. Techniques for Studying Fusion Followed by High-Energy γ Decays	60
2.2. Techniques for Studying Fission Following High-Energy γ Absorption	64

2.3.	Fusion/Fission Resonances in ^{24}Mg	67
2.4.	Comparison between Fusion/Fission in ^{24}Mg and Other Reactions	73
2.5.	Statistical Model Analysis of ^{24}Mg Resonances	76
2.6.	Fusion/Fission Resonances in ^{28}Si	81
2.7.	Radiative Capture in Other Heavy-Ion Systems	89
2.8.	Summary	90
3.	Radiative Capture to and along the Yrast Line	91
3.1.	Mechanisms for Decay without Particle Emission	91
3.2.	Activation Measurements	94
3.3.	Direct Detection of Fusion Products	97
3.4.	Summary	100
4.	Future Directions	100
5.	Review Update	103
	Acknowledgments	109
	References	109

3. Damped Nuclear Reactions

Wolfgang U. Schröder and John R. Huizenga

1.	Introduction	115
2.	Elements of a Phenomenological Interpretation of Damped Reactions	121
2.1.	Elastic Scattering, Deflection Functions, and Cross Sections	122
2.2.	The General Form of the Damped-Reaction Cross Section	132
2.3.	Dynamical Models of Collective Motion	137
2.4.	Collective Modes of Mass Transfer in Damped Reactions	149
2.5.	Macroscopic and Microscopic Potential Energies	157
2.6.	Mesoscopic Dynamics and Induced Forces	181
2.7.	Stochastic Transport Theories	205
2.8.	Applications of Transport Equations	225
3.	Experimental Features of Damped Reactions and Their Implications	241
3.1.	Systematics of the Total Reaction Cross Section and Interaction Radius	241
3.2.	Kinematics and Fragment Multiplicity	252
3.3.	Angular Distributions of the Reaction Fragments	259
3.4.	Mass and Charge Transfer	311
3.5.	Dissipation of Kinetic Energy	384
3.6.	Transmutation of Angular Momentum	467
3.7.	Simultaneous and Sequential Multiparticle Processes	559
3.8.	Transition from Damped to Fusion Reactions	669
4.	Conclusions	688
	Acknowledgments	690
	References	691
