1. TDHF Calculations of Heavy-Ion Collisions

K. T. R. Davies, K. R. S. Devi, S. E. Koonin, and M. R. Strayer

Abstract	3
1. Introduction	3
2. The TDHF Equations	4
2.1. Derivation and Properties of TDHF	5
2.2. The Effective Interactions	7
3. Geometry of the TDHF Models	9
3.1. Three-Dimensional TDHF Calculations	10
3.2. Axially Symmetric Two-Dimensional Models	11
3.3. The 2D Frozen Approximation	15
4. Fusion Cross Sections	17
4.1. Force and Symmetry Dependence of Fusion Cross Sections	19
4.2. General Fusion Characteristics in TDHF Calculations	23
4.3. Summary	40
5. Heavy-Ion Scattering	41
5.1. Light and Intermediate Systems	43
5.2. Heavy Systems ($A \geq 210$)	51
5.3. Summary	62
6. Nonequilibrium Emission	63
6.1. Alpha-Particle Emission at Scission	63
6.2. Prompt Emission of Fast Nucleons	69
6.3. Summary	77
References	78

2. The Use of Statistical Models in Heavy-Ion Reactions Studies

Robert G. Stokstad

Abstract	83
1. Introduction	83

2. The Nuclear Level Density	87
2.1. Introduction	87
2.2. Methods for Obtaining the Level Density	88
2.3. The Equidistant-Level Model	88
2.4. Shell Effects and Residual Interactions	92
2.5. Measurements of Level Densities and Comparison with Theory	98
2.6. Compilations of Level-Density Parameters	104
2.7. Summary	106
3. The Decay of an Equilibrated Nucleus	108
3.1. Introduction	108
3.2. Modes of Decay	109
3.3. The Hauser-Feshbach Formulas	120
3.4. A Consistent Treatment of Fission and Evaporation	121
3.5. Practical Calculations, Computer Codes	123
3.6. Summary	126
4. Illustrative Applications	127
4.1. Introduction	127
4.2. Compound Nucleus Reactions	128
4.3. Noncompound Reactions	174
4.4. Summary	188
Acknowledgments	190
References	190

3. Heavy-Ion Resonances

Karl A. Erb and D. Allan Bromley

1. Introduction	201
2. Coulomb Barrier Resonances	203
3. Resonances Above the Coulomb Barrier	222
3.1. Gross Structure in Elastic Scattering	222
3.2. Gross Structure in Reaction Channels	232
3.3. Intermediate-Width Resonances	239
4. Anomalous Scattering and Reactions at Extreme Angles	245
4.1. Elastic and Inelastic Scattering	245
4.2. Deep Inelastic Scattering near $\theta_{\text{cm}} = 180^\circ$	251
4.3. Transfer Reactions at Extreme Angles	254
5. Structure in Heavy-Ion Fusion Yields	256
6. Resonances in Heavier Systems	287
Bibliography	301
References	301

4. High Angular Momentum Phenomena

Ikuko Hamamoto

1. Introduction	313
2. Maximum Angular Momentum and Rotational Frequency	317

3. Way of Building Angular Momentum and Moments of Inertia	323
4. Shape of Yrast States	331
5. One-Particle Motion in Rotating Potential	339
5.1. Collective Rotation	339
5.2. Rotation Around the Symmetry Axis	347
6. An Example of Analyses of Observed One-Particle Motion in Collectively Rotating Potential— ^{160}Yb and ^{161}Yb	349
7. Difficulty in Cranking Model in Description of Band Crossings	361
8. Backbending and Interaction Between Bands	362
9. Pair-Field and Rotation	369
10. High-Spin Yrast Isomers	373
10.1. High-Spin Isomers near $N = 82$	374
10.2. High-Spin Isomers in Pb Region	378
10.3. High- K Isomers in Hf Region	380
11. Continuum γ Rays and Nuclear-Structure Information from Yrast-like Transitions	382
Acknowledgments	389
References	390

5. Polarization Phenomena in Heavy-Ion Reactions

Kenzo Sugimoto, Masayasu Ishihara, and Noriaki Takahashi

1. Introduction	397
2. Theory of Polarization Observables and Measurements	400
2.1. Density Matrix and Spherical-Tensor Moments	400
2.2. Polarization in Nuclear Reactions	407
2.3. Angular Distribution of Radiation from Oriented Nuclei	414
3. Experimental Methods	442
3.1. Polarized Heavy-Ion Beams and Targets	442
3.2. Detection of Polarization	464
4. Polarization of Product Nuclei in Heavy-Ion Reactions	483
4.1. Asymmetry in Beta Decay of Projectile-like Fragments	483
4.2. Circular Polarization of Gamma Rays from Reaction Products	493
4.3. Polarization Measurements by Other Methods	499
4.4. Angular Momentum Transfer in Quasi-Elastic and Deep-Inelastic Collisions	506
5. Heavy-Ion Reactions Induced by Polarized Beams	519
5.1. Experiments with Vector-Polarized Lithium Ions	519
5.2. Shape Effects in Reactions with Aligned Heavy Ions	521
References	528

6. Magnetic Moments of Short-Lived Nuclear Levels

Gvirol Goldring and Michael Hass

1. Introduction	539
2. Rigid Magnetic Fields	546
3. Recoil in Gas	551

4. Polarized Multicollision Hyperfine Fields	557
4.1. The Tilted-Foil Technique	558
4.2. Transient Fields	569
5. Conclusion	577
Acknowledgments	578
Note Added in Proof	578
References	578
Index	583
