

Contents

1. Heavy Ions and Nuclear Fission

Yuri Ts. Oganessian and Yuri A. Lazarev

1. Introduction	3
2. Heavy Ions and Low-Energy Nuclear Fission	11
2.1. Spontaneous Fission and Stability of Very Heavy Nuclei	11
2.2. Fission of Nuclei far off β Stability	40
2.3. Unusual Fission Properties of Very Heavy Actinide Nuclei	53
2.4. Production of Low-Excited Compound Nuclei with $Z \geq 100$ in Heavy-Ion-Induced Reactions	75
2.5. Prospects of Heavy-Ion-Induced Reactions in Fission Studies of Transfermium Nuclei	92
3. Fission of Highly Excited and Rotating Nuclei	99
3.1. Fission of Heated Rotating Nuclei—Saddle-Point Properties	101
3.2. Fission of Cold Nuclei with High Angular Momenta: Theoretical Predictions and Experimental Prospects	132
3.3. Isobaric Charge and Mass Distributions of Fragments from Fission of Highly Excited Nuclei	145
4. Nuclear Fission and Nucleus–Nucleus Collisions: Salient Examples of Large-Scale Collective Nuclear Motion	184
4.1. Fission and Nucleus–Nucleus Collisions: Unifying Features	186
4.2. Fission and Deep Inelastic Transfer Reactions: Distinguishing Features	193
4.3. Fission, Fast Fission, and Compound Nucleus Formation: Distinguishing Features	205
5. Conclusion	220
Acknowledgments	220
Note added in Proof	221
References	221

2. Transuranium Nuclei

Glenn T. Seaborg and Walter D. Loveland

1. Introduction	255
1.1. General	255

1.2.	History of Discovery	257
1.3.	General References	261
2.	Nuclear Properties of the Transuranium Elements	262
2.1.	Nuclear Masses and Fission Barriers	262
2.2.	Spontaneously Fissioning Isomers	268
2.3.	Density of Levels Above the Fission Barrier	271
2.4.	Effect of Angular Momentum upon Fission Barriers	272
2.5.	Decay Properties of the Transuranium Nuclei	275
2.6.	Ground-State Spontaneous Fission Systematics	286
2.7.	Fission Fragment Energy and Yield Distributions	288
3.	Chemical and Physical Properties of the Transuranium Elements	293
3.1.	General Properties	293
3.2.	Chromatography of the Transuranium Elements	294
3.3.	Use of Transuranium Targets in Heavy-Ion Reaction Studies	294
3.4.	Health and Safety Aspects of Transuranium Element Use	296
4.	Identification of Transuranium Reaction Products	297
4.1.	General Considerations	297
4.2.	Chemical Methods	297
4.3.	The Helium Jet Drums, Tapes, and Wheels	298
4.4.	Magnetic Spectrometers, Velocity Filters	303
4.5.	Time of Flight (TOF), Decay in Flight (DIF), and Blocking Techniques	304
5.	Synthesis of Transuranium Elements	305
5.1.	General Considerations	305
5.2.	Deexcitation of Primary Reaction Products	306
5.3.	Deep Inelastic Transfer Reactions	308
5.4.	“Transfer” Reactions	313
5.5.	Complete Fusion Reactions	317
6.	Future Directions	320
6.1.	New Technical Developments	320
6.2.	Deep Inelastic Transfer and Incomplete Fusion Reactions	321
6.3.	Cold Fusion Reactions	321
6.4.	Secondary Beams	322
6.5.	Summary	322
	Note Added in Proof	323
	References	323

3. Superheavy Elements

Georgy N. Flerov and Gorgen M. Ter-Akopian

1.	Introduction	333
2.	Predictions for the Properties of Superheavy Elements	334
2.1.	Nuclear Properties	334
2.2.	Chemical Properties	338
3.	Attempts to Synthesize Superheavy Elements with Heavy-Ion Beams	339
4.	Searches for Superheavy Elements in Nature	346
4.1.	General Remarks	346
4.2.	Possibility of Producing Superheavy Elements by Nucleosynthesis	348
4.3.	Search for Superheavy Elements in Galactic Cosmic Rays	352

4.4.	Experimental Methods of Searches for Long-lived Superheavy Elements in Terrestrial and Extraterrestrial Samples	358
4.5.	The Physical and Chemical Aspects of the Search for SHE in Nature	370
5.	Conclusion	379
	Appendix A	381
	Appendix B	383
	Appendix C	385
	References	387

4. Relativistic Heavy-Ion Collisions: Experiment

Erwin M. Friedlander and Harry H. Heckman

1.	Introduction	403
2.	Observables and Experimental Techniques	405
2.1.	Definitions and Units	406
2.2.	Experimental Techniques and Their Observables	407
2.3.	Pseudo-observables	417
3.	Nuclear Physics in RHI Collisions	424
3.1.	Limiting Fragmentation	425
3.2.	Factorization	447
3.3.	Electromagnetic Dissociation	451
3.4.	Reaction Characteristics of the Midrapidity Region	455
3.5.	Source Sizes	490
4.	Particle Production in RHI Collisions	501
4.1.	Proton-Proton Collisions	501
4.2.	pA Collisions	507
4.3.	Particle Production in AA Collisions at Low and Moderate Energies	516
4.4.	Very-High-Energy Nucleus-Nucleus Interactions	532
4.5.	The Centauro Puzzle	543
4.6.	RHI Interactions and Extensive Air Showers	545
5.	Conclusions and Outlook	550
	References	553

5. Relativistic Heavy-Ion Reactions: Theoretical Models

Joachim A. Maruhn and Walter Greiner

1.	Introduction	565
1.1.	General Considerations	565
1.2.	Theoretical Orientation	567
1.3.	Hierarchy of Models	570
1.4.	The Hydrodynamical Approximation	573
2.	Hydrodynamic Models	577
2.1.	Introduction	577
2.2.	Hydrodynamical Model Predictions	585
2.3.	Further Developments	611

3. Microscopic Models 619

3.1. Overview 619

3.2. Cascade Models 624

3.3. Classical Dynamics Models 633

3.4. Hybrid Models 641

4. Global Equilibrium Models 651

4.1. The Fireball Model 651

4.2. The Firestreak Model 652

5. Formation of Composite Nuclei 654

5.1. Models 654

5.2. Comparison 659

6. Summary 662

6.1. Comparison to Experiment 662

6.2. Present Status 673

Acknowledgments 676

References 676

Note Added in Proof (Chapter 1) 681
