
CONTENTS

Preface	xi
1 Mass Spectrometers	1
1-1 Inlet Systems	1
1-2 Ion Sources	4
A. Electron impact	4
B. Chemical ionization	5
C. Field ionization	7
D. Field desorption	8
E. Plasma desorption	8
1-3 Mass Analysis	9
A. Magnetic-sector instruments	9
B. Quadrupole mass spectrometers	14
C. Time-of-flight mass spectrometers	16
D. Ion-cyclotron resonance spectrometers	17
1-4 Recording and Presentation of Mass Spectra. Resolving Power	19
1-5 Mass Marking and Precise Mass Measurement	21
References	25
2 Ionization and Energy Transfer	27
2-1 Electron Impact	27
A. Ionization and appearance energies	27
B. Energy distributions in molecular ions	37
C. Internal conversions and radiative transitions	40

2-2 Chemical Ionization	43	6 Electron-Impact Mass Spectra	117
A. Proton transfer	44	6-1 Molecular Ions. Isotope Abundances	117
B. Reagent ion capture	45	6-2 Common Fragment Ions	122
C. Charge transfer	45	6-3 Aliphatic Compounds	127
D. Negative ions	47	A. Saturated hydrocarbons	127
2-3 Field Ionization and Field Desorption	48	B. Carbonyl compounds. The even-electron rule	128
3 Kinetics of Unimolecular Reactions	50	C. Alcohols, ethers, and amines	134
3-1 Ion Source and Analyzer Residence Times	51	D. Alkyl halides	137
3-2 Metastable Ions	53	E. Relative fragment-directing ability of common functional groups in aliphatic compounds	138
A. Metastable transitions in the second field-free region	53	6-4 Aromatic Compounds	142
B. Metastable transitions in the first field-free region	57	6-5 Natural Products	146
C. Metastable transitions in the third field-free region	62	A. Molecular formula determination	146
D. The shapes of metastable peaks	62	B. The shift rule	147
3-3 Reaction Rates and the Mass Spectrum	65	C. Fragment-directing derivatives	150
A. Fundamental assumptions	65	D. Analysis of biopolymers	153
B. Competing reactions	67	6-6 Organometallic Compounds	168
C. Factors affecting ion abundances	71	A. Isotope patterns	168
3-4 Field Ionization Kinetics	77	B. Thermal decomposition	169
4 Energetics of Unimolecular Reactions	80	C. Fragmentation processes	170
4-1 Thermochemical Data	80	D. Detection of polymeric species	172
A. Negligible reverse activation energies	80	6-7 Skeletal Rearrangement	172
B. Large reverse activation energies	88	6-8 Temperature and Ion Abundances	174
4-2 Potential Energy Profiles	91	6-9 "In-Beam" Mass Spectrometry	174
4-3 Rate-Determining Isomerizations	93	7 Alternative Methods of Ionization. Applications	178
4-4 Primary Deuterium Isotope Effects	96	7-1 Positive-Ion Chemical Ionization	178
4-5 Collisional Activation	98	7-2 Negative-Ion Chemical Ionization	186
4-6 The Stevenson–Audier Rule	100	7-3 Field Ionization and Field Desorption	189
5 Bimolecular Reactions	104	7-4 Californium-252 Plasma Desorption	194
5-1 Mechanisms of Ion-Molecule Reactions	105	8 Analysis of Mixtures	196
5-2 Methods for Observing Bimolecular Reactions	107	8-1 Introduction	196
A. Ion-cyclotron resonance	108	8-2 Gas Chromatography–Mass Spectrometry (GC/MS)	197
B. Flowing afterglow	108	A. The hardware	197
C. High-pressure ion sources	109	B. Applications	201
5-3 Acid-Base Behavior	110	C. Multiple-ion detection	203
5-4 Addition and Substitution Reactions	111	8-3 Liquid Chromatography–Mass Spectrometry (LC/MS)	206
A. Association reactions	112	A. The hardware	206
B. Substitution reactions	113	B. Applications	208
		8-4 Collisional Activation	209
		8-5 Quantitative Mass Spectrometry	211

9 Computer Techniques	216	
9-1 Introduction	216	
9-2 Data Acquisition and Processing	218	
A. Acquisition	218	
B. Calibration	219	
C. Interscan reporting	220	
D. Data manipulations	221	
E. Output of spectra	223	
F. High resolution	224	
9-3 Gas Chromatography–Mass Spectrometry–Computer Systems	226	
9-4 Library Searching	228	
A. Comparison of mass spectra	229	
B. Types of search	229	
C. Structural recognition programs	232	
10 Specific Analytical Applications	235	
10-1 Biomedical Applications	235	
A. Metabolism studies	236	
B. Pharmacology and toxicology	237	
C. Protein sequencing	239	
10-2 Environmental Analysis	240	
A. Atmospheric pollution	241	
B. Water pollution	242	
C. Residue analysis	242	
10-3 Flavors and Perfumes	243	
11 Isotopic Labeling	246	
11-1 Synthesis of Isotopically Labeled Organic Compounds	246	
A. Incorporation of deuterium	246	
B. Incorporation of ^{13}C	248	
C. Incorporation of ^{18}O	249	
D. Incorporation of ^{15}N	250	
11-2 Reactions of Isotopically Labeled Organic Ions	251	
A. Site-specific rearrangements	251	
B. Site-exchange reactions	252	
11-3 Deuterium Isotope Effects	255	
11-4 Biological Applications of Isotope Labeling	259	
12 Choosing a Mass Spectrometer System	262	
12-1 Defining the Applications	262	
A. Type of sample	262	
B. Information required	263	
C. Physicochemical applications	263	
D. Future applications	264
