

## CONTENTS

PREFACE . . . . .	v
-------------------	---

### Recent Advances in the Mechanics of Boundary Layer Flow

BY HUGH L. DRYDEN, *National Bureau of Standards, Washington, D. C.*

I. Introduction . . . . .	2
II. Laminar Flow in Boundary Layers . . . . .	4
III. Stability of Laminar Boundary Layer Flow . . . . .	8
IV. Boundary Layer Suction . . . . .	23
V. Turbulent Flow in Boundary Layers . . . . .	25
Bibliography of Related Papers . . . . .	39

### Modern Trends in Nonlinear Mechanics

BY N. MINORSKY, *Stanford University, Stanford, California*

I. Topological Methods . . . . .	44
II. Analytical Methods . . . . .	67
III. Nonlinear Resonance and Associated Phenomena . . . . .	83
References . . . . .	102

### Survey of Papers on Elasticity Published in Holland 1940-1946

BY C. B. BIEZENO, *Technical University, Delft, Holland*

I. Publications of the Laboratory for Applied Mechanics of the Technische Hoogeschool at Delft . . . . .	108
II. Publications of the Nederlandsche Centrale Organisatie voor Toegepast Natuurwetenschappelijk Onderzoek (T.N.O.), the Hague . . . . .	149
III. Publications of the National Luchtvaartlaboratorium at Amsterdam . . . . .	154
IV. Books . . . . .	164
Bibliography . . . . .	167

### A Mathematical Model Illustrating the Theory of Turbulence

BY J. M. BURGERS, *Technical University, Delft, Holland*

I. Introduction . . . . .	171
II. The Equations Describing the Model System . . . . .	172
III. Laminar Solution of the System (1)-(2) . . . . .	175
IV. Stationary Turbulent Solutions of Equation (2) . . . . .	175
V. Spectrum of the Stationary Turbulent Solutions . . . . .	177
VI. Additional Remarks Concerning the Spectrum of the Stationary Solutions . . . . .	178
VII. Nonstationary Solutions of Equation (2) . . . . .	180
VIII. Application of Equation (2) to an Infinite Domain . . . . .	182
IX. Spatial Correlation in the Values of $v$ for an Isolated Domain of Coherence . . . . .	184
X. Application of Similarity Considerations . . . . .	185

XI. Continuation . . . . .	188
XII. Statistical Treatment, Based upon the Energy Balance, of the System Considered in Sections II-VII . . . . .	190
XIII. System with Two Components in the Secondary Motion . . . . .	192
XIV. Properties of the Turbulent Solutions . . . . .	194
XV. Concluding Remarks . . . . .	196

#### On Numerical Methods in Wave Interaction Problems

By HILDA GEIRINGER, *Wheaton College, Norton, Massachusetts*

I. The Problem . . . . .	202
II. Solution of the Boundary Value Problem for $t \leq t_0$ . . . . .	205
III. The Initial Values for the Computation Beyond the Collision . . . . .	211
IV. The Problem of Determining the Solution for $t > t_0$ and the Principle of the Proposed Numerical Method . . . . .	214
V. The Computations . . . . .	222
VI. Variable Entropy . . . . .	229
VII. J. von Neumann's Mechanical Model of Shock Motion . . . . .	233
VIII. The Computations . . . . .	239
IX. Procedure for Finding a Continuous Solution by Taking Viscosity into Account . . . . .	245

#### On Bergman's Integration Method in Two-Dimensional Compressible Fluid Flow

By R. v. MISES AND M. SCHIFFER, *Harvard University, Cambridge, Massachusetts*

Foreword . . . . .	249
Part I. General Theory . . . . .	250
1. Chaplygin's Equation and Its Transformation . . . . .	250
2. Computation of $f$ for Isentropic Flow . . . . .	252
3. Method of Generating Stream Functions . . . . .	254
4. The Domain of Convergence of the Development for $\psi^*$ . . . . .	257
5. Discussion of the Domain of Convergence of the Series Representing $\psi^*$ . . . . .	262
6. Behavior of the $G_n$ at $m = 1$ . . . . .	264
7. Recursion Formula for the Functions $r_n$ . . . . .	267
Part II. Simplified Pressure-Density Relation . . . . .	270
1. Definition of a Series Representing a Stream Function $\psi^*$ Regular in the Entire Half Plane . . . . .	270
2. The Physical Relations Corresponding to the Assumption $\bar{f} = C\lambda^{-2}$ . . . . .	273
3. Numerical Discussion . . . . .	279
Bibliography . . . . .	284
AUTHOR INDEX . . . . .	287
SUBJECT INDEX . . . . .	291
