

## CONTENTS

CONTRIBUTORS TO VOLUME II . . . . .	v
PREFACE. . . . .	vii

### On the Statistical Theory of Isotropic Turbulence

BY TH. VON KÁRMÁN AND C. C. LIN, *Columbia University, New York, New York, and the Massachusetts Institute of Technology, Cambridge, Massachusetts*

I. Relation between Correlation and Spectral Theories. . . . .	2
II. Consideration of Similarity. . . . .	6
III. Proposed Theory . . . . .	11
IV. Detailed Study of the Early Period . . . . .	16
V. Conclusion. . . . .	18
References . . . . .	19

### The Laminar Boundary Layer in Compressible Flow

BY G. KUERTI, *Harvard University, Cambridge, Massachusetts*

I. Introduction . . . . .	23
II. The Basic Equations. . . . .	23
III. The Simple Problem. . . . .	29
IV. The Mathematics of Boundary Layer Theory. . . . .	37
V. Results . . . . .	69
References . . . . .	91

### Bending of Curved Tubes

BY R. A. CLARK AND E. REISSNER, *Massachusetts Institute of Technology, Cambridge, Massachusetts*

I. Introduction . . . . .	93
II. Formulation of the Problem . . . . .	97
III. The Equations for Bending of a Tube with Uniform Circular Cross Section . . . . .	99
IV. Trigonometric Series Solution for the Tube with Uniform Circular Cross Section. . . . .	102
V. Asymptotic Solution for the Tube with Uniform Circular Cross Section. . . . .	109
VI. The Equations for Bending of a Tube with Uniform Elliptical Cross Section. . . . .	117
VII. Asymptotic Solution for the Tube with Uniform Elliptical Cross Section . . . . .	118
References . . . . .	122

**Recent Developments in Inverse and Semi-Inverse Methods in the Mechanics of Continua**

By P. F. NEMÉNYI, *Naval Research Laboratory, Washington, D. C.*

I. Introduction . . . . .	123
II. Motion of Incompressible Inviscid Fluids. . . . .	124
III. Flow of a Viscous Incompressible Fluid . . . . .	126
IV. Gas Flows . . . . .	130
V. Elastostatics . . . . .	136
VI. Plasticity. . . . .	141
VII. Significance and Heuristic Value of the Inverse and Semi-Inverse Methods of Mechanics. . . . .	145
References . . . . .	148

**Theory of Filtration of Liquids in Porous Media**

By P. YA. POLUBARINOVA-KOCHINA, *Corresponding Member of the Academy of Sciences of the U.S.S.R., Moscow, U.S.S.R.*, AND S. B. FALKOVICH, *Moscow, U.S.S.R.*

I. Fundamental Equations of Steady Motion . . . . .	154
II. Motion of Soil Waters without a Free Surface. . . . .	157
III. Motions with a Free Surface—Zhukovsky's Function . . . . .	163
IV. Motion with a Free Surface. Velocity Hodograph . . . . .	165
V. The Seepage Line. . . . .	171
VI. General Case of the Velocity Hodograph. . . . .	175
VII. Application of the Analytic Theory of Differential Equations. . . . .	176
VIII. Inverse Methods . . . . .	182
IX. Other Methods . . . . .	187
X. Filtration in Multilayer Soils. . . . .	193
XI. Filtration of Oil. . . . .	201
XII. Three-Dimensional Problems. . . . .	206
XIII. Unsteady Flows. . . . .	210
References . . . . .	217
