CONTRIBUTORS TO VOLUME III	v
PREFACE	vii

Boundary Layer Problems in Applied Mechanics

By G. F. CARRIER, *Brown University, Providence, Rhode Island*

I. Introduction	1
II. The Ocean Current Problem	1
III. A Heat Transfer Problem	6
IV. A Convection Problem	9
V. The Relaxation Oscillations of the Van der Pol Oscillator	12
VI. Other Boundary Layer Problems	16
VII. General Remarks	16
VIII. Appendix	17
References	18

The One-Dimensional Isentropic Fluid Flow

By OTHAR ZALDASTANI, *Consulting Engineer, Boston, Massachusetts*

I. Introduction	21
II. The Basic Equations	23
III. General Integrals of the Equation $Z_{vv} - Z_{uu} = \theta(v)Z_v$	27
IV. The Initial Value Problem	33
V. Applications	47
References	58

Turbulent Diffusion: Mean Concentration Distribution in a Flow Field of Homogeneous Turbulence

By F. N. FRENKIEL, *Applied Physics Laboratory, The Johns Hopkins University, Silver Spring, Maryland*

I. Introduction	62
II. Statistical Description of a Turbulent Field	67
III. Fundamental Equation of Turbulent Diffusion	76
IV. Mean Concentration Distribution Produced by a Point Source of Diffusion	83
V. Mean Concentration Distribution Produced by an Infinite Line Source of Diffusion	95
VI. Differential Equations of Diffusion and Statistical Theory of Turbulence	98
Appendix	103
References	106

On Aerodynamics of Blasts

By H. F. LUDLOFF, *Department of Aeronautical Engineering, New York University, New York, N. Y.*

I. Introduction	109
II. The Diffraction of Very Weak Shocks around Wedges of Arbitrary Angle	112

III. Pressure and Density Fields behind Blasts Advancing over Arbitrary Flat Surfaces	117
IV. Head-on Encounter of a Shock with an Almost Perpendicular Wall	133
References	144

On the Presence of Shocks in Mixed Subsonic-Supersonic Flow Patterns

By GOTTFRIED GUDERLEY, *Wright Air Development Center, Dayton, Ohio*

Introduction	145
I. The Nonexistence of Solutions for Certain Boundary Value Problems of the Mixed Type	146
II. Physical Considerations	167
References	184

Vortex Systems in Wakes

By L. ROSENHEAD, *University of Liverpool, Liverpool, England*

I. Object of the Review	185
II. General	186
III. The Vortex Line Pair	186
IV. The Double Row of Vortices	188
V. Three-Dimensional Disturbances	191
VI. Other Problems	192
VII. Three-Dimensional Wake	192
VIII. Conclusion	193
References	193

Some Recent Results in the Theory of an Ideal Plastic Body

By HILDA GEIRINGER, *Wheaton College, Norton, Massachusetts*

I. Definition and Derivation of a General Plane Problem	199
II. On the General Plane Problem	212
III. Examples of Complete Problems	270
References	292

Non-Autonomous Systems

By ALBERT I. BELLIN, *Harvard University, Cambridge, Massachusetts*

I. Introduction	295
II. The Topological Transformation	296
III. Stability of Periodic Solutions	298
IV. Indices of Fixed Points	301
V. Systems of Class D	304
VI. The Equation: $\ddot{x} + f(x) = Fg(\sin \omega t)$	308
VII. The Equation: $\ddot{x} + \alpha^2 x = \phi(x, \dot{x}, k, e, t)$	310
VIII. The Equation: $\ddot{x} + k\dot{x} + \omega^2(1 + \alpha x) = 3v \cos at$	314
References	319
