CONTRIBUTORS TO VOLUME V . . . . .	v
PREFACE . . . . .	vii

## Supersonic Air Ejectors

BY J. FABRI AND R. SIESTRUNCK, *Office National d'Études et de Recherches  
Aéronautiques, Paris*

I. Introduction . . . . .	1
II. Aerodynamic Flow Patterns in Jet Ejectors . . . . .	2
III. Experimental Verification . . . . .	13
IV. Optimum Jet Ejector Design . . . . .	30

## Unsteady Airfoil Theory

BY A. I. VAN DE VOOREN, *National Aeronautical Research Institute, Amsterdam*

I. Introduction . . . . .	36
II. The Fundamental Equations . . . . .	37
III. The Oscillating Airfoil in Two-dimensional Subsonic Flow . . . . .	44
IV. The Oscillating Airfoil in Three-dimensional Subsonic Flow . . . . .	52
V. The Oscillating Airfoil in Supersonic Flow (Supersonic Edges) . . . . .	59
VI. The Oscillating Airfoil in Supersonic Flow (Subsonic Edges) . . . . .	65
VII. Non-linear Approximations . . . . .	72
VIII. Indicial Functions . . . . .	77
IX. References . . . . .	84

## The Theory of Distributions

BY CHARLES SALTZER, *Case Institute of Technology, Cleveland, Ohio, and General Electric  
Company, Electronics Laboratory, Syracuse, New York*

I. Introduction . . . . .	91
II. The Theory of Distributions . . . . .	92
III. The Singularity Functions and the Finite Part of An Integral . . . . .	95
IV. A Heuristic Approach . . . . .	98
V. Fourier Series and the Poisson Transformation . . . . .	99
VI. Ordinary Differential Equations . . . . .	102
VII. Applications to Fourier Transforms . . . . .	104
VIII. Fourier Transforms of Distributions . . . . .	104
IX. Generalized Harmonic Analysis and Stochastic Processes . . . . .	107
X. Conclusion . . . . .	109
References . . . . .	110

## Stress Wave Propagation in Rods and Beams

BY H. N. ABRAMSON, H. J. PLASS, AND E. A. RIPPERGER, *Southwest Research Institute,  
San Antonio, Texas, and The University of Texas, Austin, Texas*

I. Introduction . . . . .	111
II. Longitudinal Waves. . . . .	113
III. Flexural Waves . . . . .	151
References . . . . .	188

**Problems in Hydromagnetics**

BY EDWARD A. FRIEMAN AND RUSSELL M. KULSRUD, *Princeton University,  
Princeton, New Jersey*

I. Introduction . . . . .	195
II. Fundamental Equations . . . . .	196
III. General Processes . . . . .	198
IV. Stability of Hydromagnetic Equilibria . . . . .	204
V. Hydromagnetic Waves . . . . .	216
References . . . . .	231

**Mechanics of Granular Matter**

BY H. DERESIEWICZ, *Columbia University, New York, New York*

I. Introduction . . . . .	233
II. Geometry of a Granular Mass . . . . .	236
III. Some Recent Results of Contact Theory . . . . .	251
IV. Mechanical Response of Granular Assemblages . . . . .	267
V. Suggestions for Further Research . . . . .	300
References . . . . .	303

**Condensation in Supersonic and Hypersonic Wind Tunnels**

BY P. P. WEGENER AND L. M. MACK, *Jet Propulsion Laboratory, California  
Institute of Technology, Pasadena, California*

I. Equilibrium Condensation Limits . . . . .	307
II. Condensation of Water Vapor in Supersonic Nozzles . . . . .	320
III. Condensation in Steam and Hypersonic Nozzles . . . . .	343
IV. Diabatic Flows and Thermodynamics of Condensation . . . . .	365
V. Kinetics of Condensation . . . . .	403
VI. Experimental Methods . . . . .	433
References . . . . .	440
Author Index . . . . .	449
Subject Index . . . . .	456
