## **New Variational-Lagrangian Irreversible Thermodynamics with Application to Viscous Flow, Reaction–Diffusion, and Solid Mechanics**

*M. A. Biot*

I. Introduction	2
II. Restructured Thermodynamics of Open Systems and the Concept of Thermobaric Transfer	6
III. New Chemical Thermodynamics	9
IV. Homogeneous Mixtures and Reformulation of the Gibbs–Duhem Theorem	13
V. Nontensorial Virtual Work Approach to Finite Strain and Stress	16
VI. Thermodynamic Functions of Open Deformable Solids	19
VII. The Fluence Concept	21
VIII. The Nature of Entropy Production and Its Evaluation	23
IX. The Principle of Virtual Dissipation	30
X. General Lagrangian Equations	35
XI. Dynamics of Viscous Fluid Mixtures with Reaction–Diffusion and Radiation Pressure	36
XII. Dynamics of Solids with Elastoviscous Stresses and Heat Conduction, and Thermoelasticity	44
XIII. Inhomogeneous Viscous Fluid with Convected Coordinates and Heat Conduction	51
XIV. Lagrangian Equations of Heat Transfer and Their Mechanical Interpretation, and a Mass Transfer Analogy	56
XV. Deformable Solids with Thermomolecular Diffusion and Chemical Reactions	59
XVI. Thermodynamics of Nonlinear Viscoelasticity and Plasticity with Internal Coordinates and Heredity	62
XVII. Dynamics of a Fluid-Saturated Deformable Porous Solid with Heat and Mass Transfer	64
XVIII. Linear Thermodynamics near Equilibrium	68
XIX. Linear Thermodynamics of a Solid under Initial Stress	73
XX. Linear Thermodynamics and Dissipative Structures near Unstable Equilibrium	78
XXI. Thermoelastic Creep Buckling	81
XXII. Lagrangian Formulation of Bifurcations	82

XXIII.	Generalized Stability Criteria for Time-Dependent Evolution Far from Equilibrium	82
XXIV.	Creep and Folding Instability of a Layered Viscous Solid	85
XXV.	Coupling of Subsystems and the Principle of Interconnection	86
XXVI.	Completeness of the Description by Generalized Coordinates. Resolution Threshold and Lagrangian Finite Element Methods	88
XXVII.	Lagrangian Equations in Configuration Space. Internal Relaxation, Order-Disorder Phenomena, and Quantum Kinetics	89
	References	89

## Incompatible Elements and Generalized Variational Principles

*Wei-Zang Chien*

I.	Introduction	94
II.	Generalized Variational Principle Related to Incompatible Elements of Small-Displacement Linear Elasticity	94
III.	Generalized Variational Principle of Incompatible Elements for the Plane Problems in Elasticity	118
IV.	Generalized Variational Principle for Plate Elements of Bending	127
V.	Conclusions	152
	References	153

## Galactic Dynamics and Gravitational Plasmas

*C. C. Lin and G. Bertin*

I.	Introduction	156
II.	Observations	158
III.	Density Wave Theory of Spiral Structure	164
IV.	Dynamic Mechanisms	171
V.	Theory of Discrete Spiral Modes	175
VI.	Dynamic Approach to Classification of Galaxies	182
VII.	Concluding Remarks	185
	References	187

## Strange Attractors in Fluid Dynamics

*John Miles*

I.	Introduction	189
II.	The Spherical Pendulum	193
III.	Lorenz's Convection Model	199
IV.	The Howard-Malkus-Welander Convection Model	202
V.	Mathematical Routes to Turbulence	204

## Contents

vii

VI. Conclusions	212
References	212

### **Nonlinear Ship Waves**

*Hideaki Miyata and Takao Inui*

I. Introduction	215
II. Nonlinear Waves Generated by Ships	218
III. Characteristics of Waves around Wedge Models	242
IV. Modified Marker-and-Cell Method	264
V. Computed Waves around Wedge Models	274
VI. Concluding Remarks	287
References	287

### **The Mechanics of Rapid Granular Flows**

*Stuart B. Savage*

I. Introduction	290
II. Preliminary Discussion of Some Granular Flow Regimes	292
III. Flows in Vertical Channels and Inclined Chutes	302
IV. Rheological Test Devices and Experiments	321
V. Theories for Rapid Granular Flows	335
VI. Concluding Remarks	358
References	359
