PREFACE

vii

Slow Variations in Continuum Mechanics

Milton Van Dyke

I. Introduction	1
II. Two-Dimensional Shapes	3
III. Three-Dimensional Slender Shapes	24
IV. Three-Dimensional Thin Shapes	35
V. Closer Fits	37
VI. Concluding Remarks	42
References	43

Modern Corner, Edge, and Crack Problems in Linear Elastodynamics Involving Transient Waves

Julius Miklowitz

I. Introduction	47
II. Elastic Waveguides	48
III. Elastic Pulse Scattering by Cylindrical and Spherical Obstacles	81
IV. The Two-Dimensional Wedge and Quarter-Plane	132
References	177

The Derivation of Constitutive Relations from the Free Energy and the Dissipation Function

Hans Ziegler and Christoph Wehrli

I. Introduction	183
II. Thermomechanical Theory	186

III. Heat Conduction	194
IV. Elastic Solids	196
V. Fluids	200
VI. Plasticity	207
VII. Soils	216
VIII. Viscoplasticity	225
IX. Viscoelasticity	228
X. Conclusion	233
Appendix	234
References	236

Creep Constitutive Equations for Damaged Materials

A. C. F. Cocks and F. A. Leckie

Nomenclature	239
I. Introduction	240
II. Thermodynamic Formalism	242
III. Mechanisms of Void Growth	247
IV. Nucleation of Cavities	258
V. The Use of Average Quantities	261
VI. Damage Mechanisms in Precipitation-Hardened Materials	263
VII. Theoretical Constitutive Equations for Void Growth	267
VIII. Experimental Determination of Constitutive Laws	270
IX. Life Bounds for Creeping Materials	282
X. Discussion	288
Appendix: Mean Strains	290
References	293
INDEX	295
